meeting of treal was marked beling of confidence ral outlook in Canada. aries Gerdon, the Presiin reviewing the principal deelopments of the year, said in

"I am sure it will be very gratifying to the shareholders to learn that we have not suffered any losses from depreciation in the securities which the Bank holds as part of its assets. From this you will understand that great care has been exercised in our investments.

"The year under review has been a most difficult one not only for banks but for practically all classes of business, and this has been reflected in our profits, but nevertheless ample provision has been made for all losses and prospective losses.

Examination of the figures of the foreign trade of Canada shows how large a part the item of wheat plays. No other single commodity approaches this cereal in volume and value; as a consequence, when erop failure occurs or prices fail below the line of profitable production, the whole business of the country is adversely affected. That has happened. The wheat crop of 1929 was short in quantity; the crop of 1930 faced low prices and a glutted market; and the foreign trade returns disclose the results of these unfavorable factors. To short crops and congested markets can be traced much of the reaction in general business, the decline in railway

Origin of Pipe To Chinese

First Instrument Used By Chinese Resembled Modern Saxophone

The huge modern pipe organs used New Air Service n churches and theatres probably owe heir origin to a small Chinese mouth nstrument in which bamboo tubes were used for pipes, and which somewhat resembled in appearance the Passenger Routes Include modern saxophone, in the opinion of Dr. Berthold Laufer, curator of anthropology at Field Museum of Natural History.

Examples of these instruments extent in China, were collected by Dr. Los Angeles, with stope at Dallas, Laufer while on an expedition in Fort Worth and El Paso, will be efthe museum. They are rarely heard the Eastern Air Transport and two nowadays, however, because of a curi- divisions of American Airways, operaous superstition that a skilful per- tion unit of Aviation Corporation, it former becomes so wedded to his music became known here on Dec. 3. ture flightless airplanes.

When summer comes again the would-be aviator may be able to taste the thrills of taking the stick and putting himself through a few barrel rolls and nose dives, all without leaving the ground

One of the models looks for all the world exactly like a real airplane, with propeller, wings, rudder, landing gear, and evidently the only thing that keeps it from soaring into the sky is the pneumatic pedestal on which it is supported. "But get into the cockpit," an at-

tendant urges. "Flip a quarter into

the coin release box. Get the rush of air from the whirling propeller, electrically driven. Grasp the stick. Instantly the plane zooms, banks, turns or dives, all as you handle the stick." Chief among them, however, is the Flight Tutor, which looks less like an airplane, but acts more like one, as it has more freedom of movement, actualy allowing a barrel roll. According to its makers, the Flight Tutor has been tested and adopted by the United States Army Air Corps as standard equipment for student pilots, and has been installed at government

training fields and at Curtiss airports. Hands of invisible spirits touch the strings of that mysterious instrument, the soul, and play the prelude of our fate.—Henry W. Longfellow.
