

# WITH THE LONE SCOUTS

We are glad to note that recently a combined week-end camp was held at Markham by the members of the Lone Scout Patrols at Markham and Uxbridge.

About a dozen Lone Scouts attended in all and these included the Scoutmaster of the 2nd Troop, Mr. Don Hutchinson, and also the Assistant Provincial Commissioner for Lone Scouts, Capt. John Furminger.

A most enjoyable week-end was spent, which included many Scout activities and during which opportunities were offered to these Lone Scouts to pass tests for proficiency.

**Scout Question Box**  
No doubt quite a few Lone Scouts throughout Ontario look forward week by week to reading this column in their local paper, and I quite probably some question regarding Scouting and its history frequently arises in their minds, which remains oftentimes unanswered.

Therefore we invite Lone Scouts and others who are interested in the Boy Scouts Association to send us your queries, and we will do our best to answer them through the medium of this paper. Questions must be confined to Scouting subjects, and should be addressed to "Lone S." in care of Boy Scouts Association, 330 Bay St., Toronto 2, Ont.

Recently Toronto was the scene of the International Y.M.C.A. Conference, and boys from all over the world attended, many of them Scouts, wearing their Scout uniforms, and dressed in the National Costumes of their country.

It was quite a unique sight to see Scottish Boys in kilts, walking in the streets of the city, side by side with Greek boys in their picturesque National Costume.

**Soviet Leader Made Subject of Jokes**  
Banned from Russia "because she told a joke on Stalin," Mrs. Eva Grady says (in her book "Seeing Red") that "far better Stalin jokes are going the rounds of Moscow now—since the daily rations of black bread have been cut still finer. The offending story that brought Mrs. Grady's exploit has a young Jewish boy saving an unknown man from drowning.

"After he has recovered somewhat, the man declares his identity, much to the boy's confusion.

"Well," stammers the youngster, "you are Stalin, aren't you?" "I am Stalin," says the man, "but you are not Stalin." "I am Stalin," says the man, "but you are not Stalin."

Stalin met the shade of Lenin not long ago. "There was talk of things on earth. Lenin was full of questions regarding how things were going in his beloved Russia.

"How is the Five-Year Plan working out?" he enquired eagerly.

"Very well indeed," said Stalin, boastfully listing the accomplishments of the year just past.

"That people. How are they?" "They are with me," said Stalin. "What are your plans after the Five-Year Plan is completed?" queried Lenin.

"Oh," said Stalin, "we intend to begin a second Five-Year Plan."

"And the people?" "They will be with me," Stalin assured the shade of Lenin.

"No," said the shade, shaking his head sadly. "No, Stalin, you are wrong. The people will be with me."

**Fascists Learn to Fly Gliders in Preparation for Aviation**  
Rome—Young Fascists are being taught to handle motorless airplane gliders in preparation for later and more thorough training in practical aviation.

The first school in gliding has been established at Pavullo, where fifty members of the Avanguardisti (the advanced branch of the young Fascist party) are being instructed. Pilot's licenses will be granted to those finishing the course. Additional schools soon will be established in other centers.

**Destroyer—Robot**  
The U. S. Stoddard, a radio-controlled destroyer, built through manœuvres without a man on board, off southern California coast recently.

## Lord Beaconsfield Interested Spectator

When you tell where a person has been or what he has been doing by examining the works of his watch have been perfected by the French microscopist, Dr. Severin Icard. The clues are supplied, Dr. Icard explains, by the dust which the watch picks up on its travels in the wearer's pocket, and which can be taken out and identified under the microscope. The watch of some criminal whom the police desire to trace or perhaps of some person found dead and whom it is necessary to identify is opened, laid down on a sheet of clean, white paper, and tapped gently with the finger or with a small tool. Loose dust inside the case falls out and may be collected.

The most significant of the watch dust, however, usually is stuck fast. Dr. Icard finds, to the wheels or bearings.

To recover this he uses a special method of staining, which is like those sometimes used in the laboratory which bromine water of the bearings, valves, and other parts of the watch, which have accumulated dust. Particles of carbon have been found from the watches of chemists and mortars from the watches of lawyers, his hair fragments from those of machinists, particles of vegetable matter from those of gardeners and the hair of a woman from the watch of a woman.

Overhead, the watchmaker's resin used on the bow.

**Large Orders Placed For Ontario Peaches**  
Hamilton—Orders for some 20 carloads of boxed peaches for Western Canada have been received by the Ontario Growers' Association.

A \$40,000 order has been placed by the Ontario Growers' Association, according to Charles W. Bauer, secretary of the organization.

The consignment, representing all the fruit and vegetable growers in the province, is being concentrated effort to recover Ontario's market for fruit and vegetables in Western Canada.

The commercial representative of the Ontario Growers' Market Council was sent west some weeks ago to promote the western market for Ontario fruit. Already as a result of his efforts, orders have been received for some 20 carloads of boxed peaches.

**Amy Johnson Files On**  
Moscow—Miss Amy Johnson, British flyer who is trying out her speed in a flight from England to Tokyo, continued on her way July 29th.

Moscow was her fourth stop since she and her companion, Mr. J. Humphreys, flying instructor, left England on July 27th. The first stop was to Berlin. The Berlin-Moscow leg was completed in 12 hours, with fuel stops at Koenigsberg, Germany, and Volikie Luki, Russia.

**Day Set in Memory of Gladstone's Gift**  
London—There has been inaugurated at St. Dunstons, Haverdon, a Founder's Day in memory of the great British Liberal, William Earl Gladstone, Prime Minister, who laid the foundations of St. Dunstons' Library. Gladstone began the library in quite a small way with two wood and half stone buildings in Haverdon Hill, and here he sent some 27,000 books from his own house. It is now a national memorial to his gift.

When Gladstone passed on in 1898 and a national memorial was dedicated to him, it was agreed to erect a permanent building for the library. This was completed in 1922.

**Where England Leads**  
London Daily Mail. It is small wonder that the midleth shire of the Royal Agricultural Society of England, which is now in progress at Warwick, should be proving such a success and such an attraction to the public. The show is in itself most interesting as a revelation of what the English farmer can do, and it is set in perfect English scenery.

Though the difficulties which confront our agriculturists are immense, the English farmer is still leading the world in such matters as breeding of livestock.

**Wish Life to be Studied by Undergraduates**  
Cardiff, Wales—The guild of undergraduates of the University of Wales has inaugurated several research stations for the study of Welsh life, each of which is conducted by a different section of the guild. The theological section is publishing a Welsh translation of the Bible. The history section has produced a bibliography of Welsh history which is hoped to publish this summer.

The anthropological section is engaged upon a survey of population areas in Wales.

The guild numbers more than 3000 members.

**Radio, 50,000-ft. Up Broadcasts Clearly**  
Friedrichshafen, Germany.—The first radio broadcast from the stratosphere was heard recently when a diminutive balloon, with automatic registration instruments and vest pocket radio sending apparatus attached, took members of the Graf Zeppelin crew it had reached an altitude of 50,000 feet.

The balloon, eight feet in diameter, was being tested on the dirigible, in which similar balloons will be used in which before its aerial experiment, it will be used for gathering meteorological data.

**Shrinkage in Wood**  
The fact that wood shrinks in volume as it loses moisture, and swells as it picks up moisture, is responsible for most of the difficulties experienced in the manufacture and use of wood. Much can be done through careful seasoning and conditioning treatments to control this so-called "working" of wood. Among the activities of the Forest Products Laboratories of the Department of the Interior at Ottawa is the conduct of research in this connection and the distribution of information and data to lumber producers and users.

**A Lucky Escape**  
Vancouver.—Bill W. Bennett of the Jericho Air Station was rescued without a scratch when his airplane fell 200 feet at the Sea Island Airport last week. Bennett was taking part in a bombing demonstration with two other airplanes when the controls of his machine jammed and it crashed. The machine was wrecked, but Bennett emerged from the wreckage unhurt, and immediately requested the Jericho Station to send him another plane.

**Snakes vs. Rabbits**  
Perth, Australia.—A zoologist here has proposed that large non-poisonous snakes, particularly non-constrictors, be liberated in the districts of Australia where rabbits destroy crops and pastures to the value of millions of dollars annually.

Small non-poisonous snakes are already widely used in Australia to destroy rats and mice, but the zoologist proposes to import and breed box constrictors and set them free among the rabbits. A box constrictor breeds rapidly, and an adult's attack on a rabbit at one gulp.

**Cardenoy tractors or machine-gun carriers similar to those here will be distributed among the republican Canadian army after the manoeuvres at Fortway Camp on August 15. A machine-gun carrier is mounted where the small doors are open in the one above it to be taken across the country for inspection.**

## French Microscopist Perfects System Of Tracing People by Watch Dust

When you tell where a person has been or what he has been doing by examining the works of his watch have been perfected by the French microscopist, Dr. Severin Icard. The clues are supplied, Dr. Icard explains, by the dust which the watch picks up on its travels in the wearer's pocket, and which can be taken out and identified under the microscope. The watch of some criminal whom the police desire to trace or perhaps of some person found dead and whom it is necessary to identify is opened, laid down on a sheet of clean, white paper, and tapped gently with the finger or with a small tool. Loose dust inside the case falls out and may be collected.

The most significant of the watch dust, however, usually is stuck fast. Dr. Icard finds, to the wheels or bearings.

To recover this he uses a special method of staining, which is like those sometimes used in the laboratory which bromine water of the bearings, valves, and other parts of the watch, which have accumulated dust. Particles of carbon have been found from the watches of chemists and mortars from the watches of lawyers, his hair fragments from those of machinists, particles of vegetable matter from those of gardeners and the hair of a woman from the watch of a woman.

Overhead, the watchmaker's resin used on the bow.

**Owl Lafts**  
A kindly but somewhat patronizing landlady inquired of the young bride how she and her husband proposed to spend their summer vacation.

"The bride (a little distant)—"Our plans, so far, are tentative."

"Landlady—"Oh, how delightful. I'm sure you'll enjoy camping out more than anything else you could do."

"If a pitcher is jerked out and the game is won, that's strategy. If he is jerked and the game is lost, that's plain understatement to leave your last plate, Gertrude!"

"Main—"Because I did not know what this one was like."

"Just hold the receiver a minute," said a woman to another this morning, interrupting a half-hour telephone conversation. "until I tell my husband something else to do."

Mistress (indignant)—"Just look at the dust on this sideboard, Mary. It's at least six weeks old."

Mary (calmly)—"Then it ain't nothing to do with me, mum. I've only been here four weeks."

The man entered a cigar store, bought a cigar and left. Five minutes later he dashed back.

The man (shouting)—"That cigar is simply awful!"

Storekeeper (calmly)—"It's all very well for you to complain, you've only got one; I've got hundreds of the darn things."

## '31 To Be Record Year For Winter Fair

Increased Number of Exhibits from Prairies in June Butter Competition

Toronto—An unmistakable proof of confidence in Western Canadian agriculture has just been registered at the Royal Winter Fair in the remarkable entries received in the June butter competitions. Not only does the total make a record for the ten years of the Royal Winter Fair but a more significant feature is that the whole of the increase are accounted for by the prairie provinces. Those from Saskatchewan, for example, have been increased nearly 100 per cent.

The directors of the Royal Winter Fair consider the record entry of this year a most convincing proof of Western faith in the unending soundness of agriculture. It may be added that so far as can be judged from early intentions to exhibit, the outlook for livestock entries is equally rosy.

All the June butter exhibits have been received at the Royal and will be on display at the Royal Winter Fair on November 18th.

The Winter Fair of 1931, its tenth year, is to be a "Commonwealth Show" intended to mark its "birth," and to signalize the establishment of a national centre where Canadian agriculture was first focused so as to visualize its importance, and where, in the decade that has ensued, it has been given a worthy and rightful place in Dominion affairs.

**Giant "Spark Plug"**  
New Feature of Lightning  
Pittsburgh engineers recently adopted a new feature of lightning rods, the giant "spark plug" to lift the Woolworth Building off its feet.

The plan "spark plug" at the new Westinghouse high-power laboratory building is for the first time as over 132 million volt-ampere leapt from the terminals to the lightning rod on top.

There was a burst of flame from each end of the rod and a report like a six-inch cannon as the experimental lightning-rod "knocked out" the terrier lightning bolt in less than 1-1000 of a second.

The rod, is thus quoted in a Westinghouse News Bulletin: "The results of the tests are so promising that the company has decided to finish its development. We hope it will effect great economies in present installations of lightning rods."

When they stopped for breath, the wood frogs, as if they had waited for a moment, burst out into a perfect stream of words. "Parting words," they called it. "Parting words," they called it.

When at last the clamor of the frogs stopped as suddenly as it had begun, I let my bag in the cabin and in the moonlight hurried down a winding path which led through a little dry in the soft yellow grass where, not fifty yards from my porch, the wild deer bled in winter. Just at the edge of this hollow I found a clump of flowers which I had hoped to see. Red, gold, ivory-white, and pale green, they grew from a mat of hollow, crinkled, straw-like leaves filled with clear water, and I knelt down in the moonlight to revel in the beauty of the pitcher plants, which I had not seen in bloom for three long years.

The sight of them brought to my mind another discovery that I had made the day when I found them blossoming, and I followed the path until it wound through tussocks of ochre-colored grass.

"This device, technically known as a 'Deion' lightning protector, is used to protect buildings against flashover. Engineers have estimated that if the Turck lightning-rod is successful and had been available ten years ago, the world would have saved a hundred million dollars."

**Doubtful**  
A lazier agency inserted an advertisement for a man who was required to escort parties abroad. A hard-up young man, who desired an easy job, applied and was given an interview.

"Good morning," said the agency official. "Paris, you French?" "It—er—beg your pardon?" stammered the applicant.

"Paris, you French?" "I'm not French, but I don't quite catch..." "I said, 'Do you speak French?'" "The young man smiled easily. 'Oh, yes,' he said, 'fluently.'"

The aid was showing that someone had addressed individual to his room in the seaside boarding house. At the door he paused and said: "I presume you're here dressing for dinner. The maid looks flummily at him. 'Oh, yes, sir,' she replied at last. 'Ary meals taken in bed are extra.'"
