This is one of a series of weekly articles on health topics, written by the Canadian Social Hygiene Council.

Now we come in our series to the disease known as Scarlet Fever.

The most of the surface of the body and it is made up of little red points close together. After awhile it begins to fade and the skin peels off, at first over the chest and body and in very fine particles. The last parts to peel are the palms of the hands and the soles of the feet.

may be spreading the disease among the Pever in varying degrees of intensity. A light attack is frequently termed Scarlatina. Some people say "Oh, it's just Scarlatina." and neglect the disease, permitting the sufferer to spread the germs throughout possibly a whole community.

The "Strawberry Tongue" of Scarlet Fever is a symptom which every grandmother can recognize. The tongue is furred and under this white everying is red and swollen. The child suffering from the early stages of the disease feels tired, restless and out of sorts. Usually there is a chill, vomiting or convuisions and often sore throat. The skin is very dry and hot. In ordinary cases these signs are followed in a day or two by a rash of lowed in a day or two days and means of protection in the primary of lo
