Mapping

Photography for Mapping

Neponset, Mass.—Setting forth on a three months' cruise to the northern most section of Labrador for the purpose of making accurate maps and charts of the whole northern 200 miles of the Labrador coastline, the Grenfell northern Labrador chartiag expedition left Lawley's shipyard recently aboard the 100 foot schooner Ramah. Dr. Alexander Forbes, of the Harvard Medical School, is in charge of the expedition, which was first conceived and suggested by Sir Wilfred Grenfell.

London.—The hew London is to be a London without chimney-pots. All over central and west end London new buildings are going up with flat roofs. Gas fires and electric radiators are displacing coal fires. The traditional open grate is passing and is taking away with it those infinitely varied five-problems which still give the old London a skyline all chimney-pots and stacks and cowls.

No other metropolitan skyline is quite like it. Its rows upon rows of red pots, clustering two or four or eight to a chimney, astonish and puzzle overy newcomer to London—particularly newcomers who land at Southampton or down the Thames, be-

Post of the Soviet Union.

After the survivors of Bering's disselves have more efficiency than either covery voyage to Alaska in 1745 resulves have more efficiency than either during the day the roses draw their covery to the turers poured into the islands in bine, this efficiency can not be utilized be called their pr turers poured into the islands in search of furs, exploiting, enslaving and killing the natives. Few survived and since that day the islands have been sparsely settled, many of them uninhabited. It was because they were opened up from the east that the islands are known as the Alentians. The name is derived from that of a great which exists under 600 miles an eccasional carryall, and upon The name is derived from that of a Kamchatkan cape, the National Geographic Society says.

The successful healing of decayed teeth so.ely through treatment with special diets was reported at a dinner given in honor of Dr. Sherman L. Davis, wh, was credited with recent nutritional discoveries which may bring about profound changes in the practice of denistry.

A case of the filling of a cavity in a tooth without mechanical assistance in Washington was described. At least a dozen similar cases were said to have been reported by dentists in various parts of the country, and it was held to have been demonstrated that decay of the teeth almost always can be prevented and in many cases arrested after it has made procases arrested afte
