actually one of the greatest travelling agents of the organisms of death.
It is hard to estimate the terrible When in Toronto part played by the rat as far as the human race during the past is con-cerned. It was responsible for the Make Your Home at great Black death (the bubonic plague) and probably for countless other plagues. It is now possible to hope that mankind may, to a great Bay St., at Dundas St. degree, be freed from certain agelong terrors, but it must be remem-BATES -- \$1.50 to \$2.50 Single bered that unless we are prepared to control the influx of rats, a great Every hotel service in a clean, epidemic may appear and wipe us quiet, fireproof building.

million British subjects succumbed within the seven preceding years from bubonic plague. This plague is a bacterial disease of redents, and especially of rats, which is commonly transmitted to man by fleas. Besides bubanic plague, rats are responsible for trichinosis, a disease caused by an animal parasite, the trichina worm. Man usually becomes infected from eating raw pork, contaminated with large numbers of the worms. Hogs become infected through infected rats. Around slaughter houses and stables in which hogs are found, of all rats captured, 75 per cent., and even as high as 100 per cent, of these pests will be found trichinized. In countries such as Germany and Italy where raw pork is eaten, the first step taken to break up an epidemic within the seven preceding years where raw pork is eaten, the first step taken to break up an epidemic is to start a campaign against the

rat, thus breaking the connecting link between man and the disease. Rats have also been shown to serve Huge Rat Armies
Rats have also been shown to serve as a reservoir for the spirochetes causing infectious or epidemic jaundice. The disease is transmitted through abrasions of the skin or by mouth from contaminated material. Rat-bite fever, found in many parts of the world, and especially in Japan, is caused by the bites of rats. The rat is also a host for many kinds of bacteria and animal parasites We

of bacteria and animal parasites We The extent of the depredations of the common rat is not generally realized. Rats are one of man's chief rivals for the possession of the earth. They levy a ruinous toll on on agriculture, commerce and industry. But great as is the economic loss, the rat is first and foremost a menuage to public health.

Cause of many of our unknown. Despite man's rutbless warfare against rats for centuries, their numbers and certructiveness have changed very little. Preventive measures are perhaps more important than curative measures if any mark-

nenace to public health.

Rats are cosmopolitan. At one is to be achieved. The first and time they were known in only a commost important thing to remember paratively small part of the world.

paratively small part of the world. Now they are present in every part of the globe. Their fectuality, cunningness and adaptability to every kind of environment have enabled them to flourish and secure a foothold aimost everywhere.

Of the 300 species known, one known scientifically as Mus norvegicus is the most important in this country. He is popularly known as the common, house, wharf, barn, gray, brown, or Norway rat. This rat is larger, stronger, more robust, more feroclous, more prolific and cife fers in habits from other species. He is a burrower, living in excavations which he makes under buildings and buildings them.

The permanent exclusion of rats involves depriving them of a home. Dwellings and buildings should be come feroclous, more prolific and cife fers in habits from other species. He is a burrower, living in excavations which he makes under buildings and buildings the second to such a such as the common of the rat that they should become the same as the common of the rat that they should become the same as the common by savers—the finest dyes money can buy—I truly believe."
