showed lilac lanes, wan gulfs, sea breakers of misty red.

In that high pasture I thought myself alone; but presently, as I sat on the regist of a gnarled and encions and the register of a gnarled and encions and the register of a gnarled and encions and the register of the roots of a guarled and ancient apple tree, two cows with tinkling bells fading hill, leaving me with another ame by. They were followed by a treasured memory about solitude, And tiny mountain girl, not more than five I never look at the spangled heavens years old. I knew her well, but I without recalling what that baby said hardly had expected to see her so far of the stars-"They lights me home." away from home at such an hour. She recognized me at once and stopped to Heart."

are blooming, and in that way they (Animal Life) Just as the nomad savage wanders wander throughout the country, breedto and fro about his wilderness, making his camp here one day, miles away the next, according to the ever-fluctuating supply of the bare neces-sities of life, so do certain birds pass sutes of life, so do certain birds pass the greater part of their existence in moving around. Few birds are really stationery during the year; in fact, it is reither the eventions for a countries on the life countries of the life countries on the life countries of the life countries of the life countries on the life countries of stationery during the year; in fact, it is rather the exception for a species to be absolutely sedentary. Many, it not all years are great warder to be absolutely sedentary. to be absolutely sedentary. Many, if not all, young birds are great wanderers, being driven from their birthplace by parents of one kind or another are the serious or described by parents of one kind or another are the serious or described by parents or described by par ers, being driven from their birthplace by parents or deserting it voluntarily as soon as parental care becomes unnecessary.

In the anytomy, when conversels and

necessary.

In the autumn, when quarrels and bad friendships associated with mating and nesting in the previous spring and summer are forgotten, many birds and summer are forgotten, many birds and summer are forgotten, many birds sone or the nariodical variations in the previous and the previous spring and summer are forgotten, many birds sone or the nariodical variations in the organisms have been in the organisms have been in the corp. and summer are forgotten, many birds become gregarious, and forming into companies, both large and small, undertake roving movements throughout the country—and even the world—to suit their feeding. Bush-cats, larks and parrots are among these nomads

Belief of the California scientist that that goes with him along, the organisms have been in the coal since it was formed from rotting vegetation of coal-age swamps is founded chiefly on unsuccessful attempts he made to force such organisms into the coal.

Belief of the California scientist that that goes with him along, the organisms have been in the coal since it was formed from rotting vegetation of coal-age swamps is founded chiefly on unsuccessful attempts he made to force such organisms into the coal.

A far faint voice that follows him, that goes with him along, the contrary, one mass scene follows another, and French songs, if the coal sweet in roadside gardens filled with autumn robin-song.

The Birth of Ja

Strictly speaking there we music before the World.

And sweet in roadside gardens filled with autumn robin-song.

The Right of Ja

On the contrary, one mass scene follows another, and French cheers and the chattering of the coal sustaints of the coal size of the coal sustaints and parrots are among these nomads usually escapes notice. Sometimes, suit their feeding. Bush-cats, larks and parrots are among these nomads of the bird world.

See and fill the same of the coal and the same of the bird world.

Mew Orleans, where its screen and fill the vast auditorium, usually escapes notice. Sometimes, however, the cries of the travelling of the coal and the shires, all the shires, all the shires, all the shires, all the shires, and parrots are among these nomads of the bird world.

chats cover a great area of Australia in the course of a year, and they consume enormous quantities of insects.

One spring I made a rough calculation of the number of insects consumed by twelve families of bush-chats nesting twelve families of bush-chats nesting the plans.

Still night, even from city streets and the coasts from contamination.

Dean Lipman said: "I believe it is quite possible for a cell like a spore to remain in a state of suspended animation.

Dean Lipman said: "I believe it is quite possible for a cell like a spore to remain in a state of suspended animation.

The will come at twilight to the lighthouses round the coasts great numbers of migrants are often in the course of a year, and they consumed by constructed, under certain atmospheric conditions, by the blinding glare of the number of insects consumed by twelve families of bush-chats nesting the plans.

His studies warrant, he said, the believe it is quite possible for a cell like a spore to remain in a state of suspended animation.

The misty sea:

The misty sea twelve families of bush-chats nesting in the radius of an acre at the edge of a tidal marsh. There was an average of three young in each nest, and a conservative estimate made between the time the young were hatched and when they had left the nest, revealed that those 36 young birds accounted for no fewer than 36,000 grubs and insects. It was impossible, of course, for no fewer than 36,000 grubs and insects. It was impossible, of course, to estimate the number consumed by

to estimate the number consumed by the parent birds.

Beauty of plumage and definite individuality mark the few families of chats in Australia. In point of coloration the crimson chat surpasses both the handsome little orange-plumaged chat and the common black and white member of the order. It is without question one of the dazzlingly beautiful birds of Australia. The forehead, crown, breast, and upper tail feathers to this part of the world, having no in aviation. relation to the whinchat and the stoneterior, while, as its name would infer, an American airplane pilot's license, "desert chat," or gibber-bird, lives has been given an executive post in in the more or less arid areas in the the aviation administration of the in the more or less arid areas in the aviation administration of South Australia, the west of New South Wales, and the country around Lake Eyre and Lake Torrens. All of them make their nests quite fied as a pilot. She intends to work All of them make their nests quite fied as a pilot. She intends to work in New York University, where she studied aviation and quality around the property of the pr close to the ground, usually in tufts of in Nanking only for one year, after grass, rushes, or briar bushes, and which she will go to Europe to study sometimes near the roots of tall technical aviation, hoping to assist

China to establish its own airplane Many birds desire the company of factories. Many brus desire the control of their fellows in winter, and it is customary to see large flocks of different Ancient Village kinds feeding in field and forest. The gregarious nature of the red-breasted gregarious nature of the red-breasted robins forces itself upon our notice a little time after the birds have finished nesting, but this flocking habit is witnessed at its best in autumn, when the birds form into companies and undertake a well-defined migration from highlands to lowlands to escape the dertake a well-defined migration from highlands to lowlands to escape the rigors of winter. Often the males keep to themselves, and there is nothing prettier than a flock of these sprightly and earlier difference which point to a Bronze Age survival. It is expected that it will be some five years and the sprightly and earlier difference were already to the second five years and the second five years are sprightly and earlier in the summer and already relics have the sprightly and gaily-colored little creatures moving across the open lands, completed. flying from one stone to another, then to the ground, and to another stone or a fence, and so on, feeding as they go.

Aviation Laws Taught

Los Angeles—College students at City parks and suburban gardens are the University of Southern Cali-

frequently visited by these dainty win-ter migrants.

Probably the best example of no-madic migration are afforded by parrots and lorikeets. Their movements, r like those of the chats and robins, are like those of the chats and robins, are purely in quest of food, and as this, in the case of the lorikeet, is found in the flowers of the eucalyptus, we find the birds following up the irregular flowering of the trees. When the blossoming of the handsome crimson-flowered eucalyptus in suburban streets and gardens, one is almost assured of observing a food of musk and swift of the case of the clored, and as this, in the case of the lorikeet, is found in the flowers of the eucalyptus, we find the birds following up the irregular of England.

In Wales the maternal death-rate has been, during the past forty years, about forty per cent, higher than that of England.

VEGETABLE COMPOUND

TIKED AFTER 10 HOURS SLEEP

NOW SHE HAS "THAT KRUSCHEN FEELING"

Everyonc knows the meaning of the famous phrase: "That Kruschen feeling." Well, here is a typical instance of the extreme reverse of that condition. This woman had a perpetual tired feeling. See how it affected her:—
"I am 34 years old, and the mother of two small sons. So my life is a very busy one. Ever since I can remember, I have always suffered with a feeling of tiredness, and Lever felt ready to get up in the morning, even after 10 hours sound sleep. I have often felt so tired after lunch, that I have sleep for 3 and 4 hours, having to do the work in the evening. I took Kruschen Salts for a fortnight—and lost the tired feeling completely. I feel fresh and wide awake, and I have never felt better in my life."—Mrs. E. M. W.

Millions of men and women all over the Salts on the life feeling that the salts of th
