The International

warbled herd" can act as a source "warbled herd" can act as a source reinfection and spoil the good work done by progressive farmers.

The treatment is quite simple, requires little labor and is very cheap. Warble fly powder of which there are many kinds on the market, is the most common treatment now given and has given the best satisfaction. One pound when mixed with one gallon of water is sufficient to treat thirty head of cattle three times. It is not wise, however, to mix up more than you can use at one time. The first theatments should be given during the last week in March or first week in April. This leads the followed with a should be sought. In meany ways and that the body.
