ANALYSIS.

Toy Shop Scheme" was a great success all over the Dominion.

Of course full statistics have not yet been received, but we know that the flow will be glad to learn that the Lone Scouts were right on the job and that their efforts were responsible for many poor kiddles having a Happy Christmas and keeping their faith in Santa Claus unshaken.

We have had reports from a number of Lone Scout centres throughout Dutario, amongst the foremost being the following:

Belmont.—Under P. L. Donald Layield provided toys, groceries, meat, ranges, candles and nuts for all family success the success and success the foremost being the following:

Belmont.—Under P. L. Donald Layield provided toys, groceries, meat, ranges, candles and nuts for all family success the success that the good work which they commenced as Lone Scouts. Belmont the good work which they commenced as Lone Scouts.

Recruits are always welcome in the Boy Scouts Association, which is absolutely a non-military crganization. The Lone Scout Department is catering especially for boys from 12 to 18 ing. and know that the ex-Lonies will to good work which they commenced as Lone Scouts.

Farm Queries

Henry G. Bell, B.S.A., Dept. of Chemistry, O. Address All Letters to Farm Editor, 73 Adeland West, Toronto. All Answers Will Appear in Column. If Personal Reply is Desired Enclared Stamped and Addressed Envelope.

Whether or not lime can be used pounds are not soluble in with profit on a soil depends on what hence are unavailable to s commonly called the reaction of crops. In actual farm is commonly called the reaction of that soil. For a considerable time it has been known that certain soil samples, if moistened, will turn blue litmus paper to red. In more recent years, the Department of Chemistry, Ontario Agricultural College, has developed and circulated a more delicate test known as the Reacto Soil cate test known as the Reacto Soil sults which indicates very clearly and Test, which indicates very clearly and sults which will be pro quite readily the condition of the soil.

When a small sample is treated with the greenish-blue liquid which is supplied in this test, if it turns the liquid Lime must be added a decided golden yellow colour, it is ity. Lime will not tak an indication that the soil is quite f. tilizers, nor will acid and in need of a relatively large the place of lime. Each amount of lime. If the liquid is turned peculiar function to to a slight olive green, the soil : still corrects soil sourne acid, but not so distinctly so, and consequently, not so much in need of as sure as possible lime. If the test liquid when applied will be obtained to the soil sample remains a greenish- that your soil is so blue, the soil is neutral, and if on the reaction.

blue, the soil is neutral, and if on the other hand it turns to distinct dark blue colour, the soil is alkaline or sweet.

Acidity of soil, then, is closely related to the supply of lime in the soil. A sour soil is closely related to the supply of lime in the soil. A sour soil is in all cases a soil devoid of lime. Lime is chemically known as a base, which has the power to correct acidity. Lime is removed from the soil by two general means. First, by leaching, Limestone is fairly really soluble in water, but more readily so'uble in water to which carbon dioxide has been added. Under certain circumstant of the soil is alkaline or sweet.

Many practical evid point just discussed coal coal water in the soil. A sour soil is in all cases a soil devoid of lime. Lime is removed from the soil by two general means. First, by leaching, Limestone is fairly really soluble in water, but more readily across the soil. A sour soil is closely related to the supply of lime in the soil. A sour soil is in all cases a soil devoid of lime. Lime is removed from the soil. A sour soil is in all cases a soil devoid of lime. Lime is removed from the soil.
