## new "shingle." THE VIGOUR OF CANADIAN REGISTERED POULTRY

(Experimental Farms Note) The reputation for vigour of Canadian bred poultry was fully established when Canada sent an exhibit of live birds to the World's Poultry Congress heli at Barcelona, Spain, in 19-

Despite the fact that many of the pirds in the exhibit had travelled all the way from the West Coast and Van the way from the West Coast and Van couver Island, thousands of miles across the continent to Ottawa, where they went through the usual washing and conditioning for show before become the conditioning for show before the conditioning for show the c and conditioning for show before being re-shipped via Montreal to England, then to Barcelona, a rail, ocean rail journey of over six thousand miles, they arrived at their destination in perfect health and maintained that condition throughout the Congress, not one bird showing off-condition

during the entire period. This remarkable evidence of super- W. P. MACKAY, K.C. - H. P. INNES or vigour was freely commented on at the Congerss, and also at the 1930 Congress held in London, England, NORMAN C. COLBERT where 750 Canadian birds were on exhibit. But it remained for a Leghorn pullet among these 750 to still further demonstrate this remarkable vigour. This pullet from Canadian Mondays from 2.30 to 4.30, and Fri Registered parents bred in British Col umbia, was shipped early in July from Vancouver Island to Ottawa. Here she was show-conditioned along with the rest and re-shipped via Montreal Barristers, Solicitors and Notarie to London, England. She was on exhibition in the Crystal Palace for Harrison Arrell, K. C .- County Crown nearly two weeks during the Congress Attorney. Solicitor for the County then returned to the owner in British Columbia, via Liverpool, Montreal and Vancouver. She travelled a journey

"This car at Chicago is but one of several stroam-limity cars that we have built to order on the V-16 Cadillac chassis", explained Lawrence P. Fisher president of Casillac (II)

Should the various crops be grown continuously year after year on the same land or should they be grown in suitable rotations? Should any consideration be given to the adaption of different crops to different soils or should they be grown irrespective of the soil type?

Recent experimental work supplies much useful information on these problems. Some crops such as wheat, oats and corn, it has been discovered, produce decidedly higher yields when grown in rotation than when grown under a system of continuous cropping.

Other crops, such as timithy, to-bacco and potatoes, may, if desired, be grown satisfactorily in a system of continuous cropping provided the soil fertility is maintained. Legume on the test during a three-days' demonstration fun from Osaka to Tokyo, onstration fun from Osaka to Tokyo, the radiator was examin.e' as a matter of precaution, and it was found that less than a quart of oil aero-dynamic car. be grown satisfactorily in a system of continuous cropping provided the soil fertility is maintained. Legume of pass, have a very beneficial effect not only in increasing the amount of protein in the feed but in creating soil conditions very much more favourable for subsequent crops than is possible with non-legumes.

The effects of weeds, diseases and insect pests constitute individual problems which may require in each different case, a different treatment. A rotation may or may not assist in controlling the problem; certain cultural treatments may be required if efficient control is to be secured. The largest yields can be obtained only when the best methods of production are followed. Experiments have shown the best rates and detay.

This Autumn in both Eastern and Western Canada if crop prospects are realized, and it is certain much of the buying will be in the automotive field.
