Advertisements without specific instructions will be inserted till notified and charged accordingly.
GEO. L. MILLER
Editor and Proprietor

SUPERFLUOUS WORDS AND OTHERS MISUSED

How often we receive copy which reads "The Rev. Mr. Jones." Of course we all realize the "the" is unnecessary, but force of habit drives us on in the old course. The question of prefixes was recently discussed by the Pergus News-Record, when it decries the use of the term "Mr. (Dr. or Mrs.) Jones." (Rev.)

CORN vs. BARLEY IN THE LAYING RATION

(Experimental Farms Note)
The question of using home-grown barley instead of the comparatively high-priced corn for which the farmer and poultryman in Canada must pay ready cash is an important one. The price of corn in some sections of the country places it almost beyond the reach of the average poultryman and makes its use in large quantities almost prohibitive.

WHY BOTHER ABOUT THE OTHER FELLOW

Why bother about the other fellow? If he is having a tough time in his business and his personal affairs are out of joint, isn't that his concern, not mine? It is his business, not mine, that he should look after. If local politics are troubling him, well, isn't that his business, not mine, that he should look after?

A LIVING GHOST

There's a tall grey ghost by the name of Late Simcoe's corridor into Couchiching, at Orillia, Ont., is called, a six-foot grey ghost with a booming laugh, and a handsome face that makes you believe that it is like when alive, for years ago a Toronto evening paper reported Jack Gaudaur embalmed and buried and wrote its obituary.

WHAT THE HOTEL ASSOCIATION WANTS

The document presented to Premier Henry by the Hotel Association of Ontario on its recent visit is one which the citizens of the Province will find well worth studying. It is a memorandum outlining the viewpoint of the Hotel Association as to the regulations under which beer and liquor should be sold. The Hotel Association is not, we understand, in any line of business, why should it trouble myself so long as it doesn't hurt me?

FOLLOW CORN-FED STEERS WITH HOGS

(Experimental Farms Note)
Hogs should follow corn-fed steers. They will still improve the soil, but will utilize the grain more profitably. The profit from corn-fed steers will be largely on the hog. The hog will utilize the grain more profitably than the steer. The hog will also improve the soil more than the steer.

USING NEWSPAPERS

(Amherstburg Echo)
How to reach a large number of customers or prospective customers most economically and efficiently is a problem which still worries a great many business men. But it is really solved long ago, and the answer is this: Print your message in the newspaper.

CANT MELT GOLD COIN GOVERNMENT WARNS

A warning to those who might be tempted to melt down gold coins in order to secure the high price now prevailing for the raw metal is contained in a statement issued by the Department of Finance recently. Heavily penalized melters who might be tempted to take advantage of the market in that manner, the statement points out as a general answer to inquiries received from holders of gold coins, was as follows: "Gold coin, which is legal tender in Canada, is to be melted down only by the Royal Canadian Mint."

Night 30-3
JARVIS, ONT.

HEALTH

Why be vaccinated?
Smallpox is the most dreaded of all diseases. It is a disease which is highly contagious and which is often fatal. It is a disease which is preventable by vaccination. The only safe way to protect yourself against smallpox is by vaccination.

THE SOCIABLE SCOTCH

Many are the stories that humorously illustrate the differing traits of the Englishman, the Irishman and the Scot. According to the latter, however, relates to four separate wrecks that had cast up on a lonely island of the South seas. Two were Scotchmen and two were Englishmen.

SNOW-MOULD TURF INJURY

(Experimental Farms Note)
During the past three years, the Dominion Laboratory of Plant Pathology at Edmonton, Alberta, has found that the most important single factor of the cause of winter injury to lawns or putting greens is due to a parasite called snow-mould. This parasite is first recognized as soon as the snow melts in the spring. As soon as the grass starts to grow, dead areas are found in the turf which are sometimes covered with aerial growth of the snow-mould fungus. The fungus is often found to be growing into and through the leaves, stems and roots of the plants.
