HOCKEY HEARD

AROUND WORLD

Fields heretofore considered outside the range of the Diesel engine have now been opened by the Wilson Engine Corporation in collaboration with the General Motors Research Laboratories.

A new steel test two-cycle Diesel engine in the bulk power class, and a Diesel power plant for high speed railroad locomotives, as well as for many other uses, where weight and size prohibited the use of Diesel power before. The new Diesel line includes Straight Eights as well as V-type 12's and 16's.

NEW DIESEL ENGINE

Speaking of power, it's not every day that a 50-horse power station is heard 10,000 miles away. Nevertheless, one of the General Motors Diesel Brad-stets was heard in Wellington, New Zealand, a few weeks ago, and the surprised listener had the station signaller's mind to note the station signaller's name. Strangely enough, the broadcast was coming from CHML Hamilton, which has power of only 50 watts. The listener who heard Foster Hewitt's voice, was Kevin Sheehan. He says he heard the game clearly but faintly. This is just another instance of the popular General Motors Broadcasts being heard thousands of miles away from the Canadian network which carries this feature each Saturday evening.

S. S. Moore, lumber, 24.26

SAFE DRIVING

will save money

Our Merit Rating Plan of Automobile Insurance provides reduced premiums for careful drivers.

Because we believe that careful motorists are entitled to a further reward for Care, Courtesy and Common Sense in their driving, we have extended our Merit Rating Plan in Ontario so that DISCOUNTS UP TO 25% are now available for Private Passenger Automobiles on All Classes of Automobile Insurance—PUBLIC LIABILITY, PROPERTY DAMAGE, COLLISION, FIRE AND THEFT.

10% DISCOUNT to motorists who have owned and operated a car for the past year without claims.

15% DISCOUNT to motorists who have owned and operated a car for the past two years without claims.

20% DISCOUNT to motorists who have owned and operated a car for the past three years without claims.

25% DISCOUNT to motorists who have owned and operated a car for the past four years or more without claims.

Our Merit Rating Plan is the only one available in Canada which provides such discounts for all coverages for Private Passenger Automobiles. These discounts apply, deducted from the premium on the issuance of his policy.

A claim having been made under either the Collision, Fire or Theft coverages will not disqualify the motorist for his Merit Discount on the Public Liability and Property Damage sections, and likewise a claim under either the Public Liability and Property Damage sections will not disqualify the motorist for his Merit Discount under the sections of Collision, Fire and Theft.

"It's the man at the wheel that counts"

If you can qualify for this policy, see us today. Full details furnished gladly on request.

SOME FACTORS AFFECTING MORTALITY IN BABY CHICKS

(Experimental Farms Note.) It is a regrettable truth that with the rapid expansion which has taken place in the poultry industry in the last few years, there has been a corresponding increase in the number of chicks hatched. It is more and more common to find that a brooder house has been mostly rented for the high death rate but where mortality is abnormal, the cause may be traced to one or more of the following hazards: inferior or faulty incubation; poor brooding facilities or equipment; improper feeding.

Probably the major factor in the brooding stage and, with the advent of large hatcheries where the source of supply is doubtful, the danger of this source has increased. Recent reports from various sources indicate that the attitude of the grow-up-pup is the adults do not use milk, then the milk is apt to refuse it because he is not used to it. Public health reports, 78 per cent indicated that the young chicks who want to drink like his father should eat the milk. Children like variety in their meals just as much as adults do. There is no reason why milk should always be served in the same way. Milk can be used in many ways, and in the preparation of cream soups, junket, custard and puddings. The child does not have to drink it in the pint which he roasts. Let him have it in a variety of forms and he will not tire of it. Many a child has been turned against milk because he has been forced to finish a drink which he did not want. "Drink that, or I'll not be a pleasant tone to accompany the drinking of milk." Food should be expected to eat the child cannot be wasted, but the child cannot when he has had enough, he should be expected to eat more, at the same time. Better knowledge of the proper use of milk should be given anything to eat until the next meal.

There are several causes for poor appetite. The child who will not eat may be developing an illness. The child who is tired or excited is not interested in food. The shut-sweets between meals do not look well. The healthy child, who plays out of doors and who has plenty of rest, with regular meals and plenty of food to eat between meals, eats at regular times and eats well because he enjoys his food.
