

Voice of the Press

Canada, The Empire and The World at Large

CANADA

TRAFFIC NOTE

For some reason Sunday traffic reminds us that it has taken Niagara Falls 60,000 years to move seven miles.—Hamilton Spectator.

GRANTS TO RURAL FAIRS
Certain the rivalry that is created by these fall fairs and the educational influence that they exert in stimulating the Rensselaers to attain the highest possible degree of excellence, more than compensate for any outlay the provincial government may make in the respect.—Branford Express.

HIGHWAYS AND THE SEA

What a shock was the loss of one hundred and thirty-four lives in the burning of the Havana-New York liner, *Morro Castle*. We venture to say that fully as many lives are lost every month in traffic accidents on our highways, but reading "about them" does not register a shock, unless some relative or friend should be a victim.—Aylmer Express.

PEOPLE TO COME

It is inevitable that, with Canada's millions of acres of fertile land still uncultivated, there will be, in future years, an influx of new population. That will only come when the amount of employment crisis has passed and when agriculture has become more prosperous. Then the opportunities of the country, and the expansion which will be renewed, will absorb in a normal way a considerable force of immigration.—Winnipeg Free Press.

JEST ON PRESIDENT ROOSEVELT

A satirical book reviewer, Theodore Hall of the Washington Post, and an alert columnist, Frank E. Kent, of the Baltimore Sun, hit an excellent jest on President Roosevelt.

When Upton Sinclair left Hyde Park after his call with the President he quoted Mr. Roosevelt as saying: "I am glad to see you, Mr. Sinclair, when I was young my mother used to read 'The Jungle' aloud to me at breakfast, and it quite spoiled my pork chops."

Mr. Sinclair's book, "The Jungle," was not printed until 1906, when Mr. Roosevelt was 24 years of age, had been out of Harvard two full years and was one year married.

Messrs. Hall and Kent doubt if Mr. James Roosevelt, Sr., was then in the habit of reading to her son at the breakfast table and they kindly suggest that the President confide in Mr. Sinclair's "The Jungle" with Rudyard Kipling's "Jungle Books," which was well suited for reading aloud to children.—St. Thomas Times-Journal.

OBVIOUS LESSON

The Township of Scarborough in Ontario, with a population of 20,000, has not had a case of diphtheria for a year. This is the result of a ten-year program of inoculation in the schools and among children of less than school age. Is not the lesson obvious?—Saint John Telegraph-Journal.

PARDONABLE MERRIMENT

Melvin Blanton was sentenced at Indianapolis yesterday to serve 12 years for holding up a roadside tavern. He laughed. Why not? As a contrast to the chap who drew 10 and 10 lashes in Supreme Court at Sandwich the other day for a similar crime, Melvin knows the chances are he'll be taken to some nice home place of confinement and given a cell with futuristic furniture and a Southern exposure, just in time to listen to the World's Series.—Border Cities Star.

RECOVERY IS ALL-ROUND

The successes of Great Britain in sports the past year or two shows that a new generation has arrived to take the place of the generation of young people wiped out by the World War, and in years to come British athletes will be a challenge to the athletes of any other nation.—St. Thomas Journal.

THINK NOISE A VIRTUE

To some, indeed, noise is accepted as a virtue, as a sign that we are up and coming, a bustling, hustling lot who are getting things done. So, year after year, we go on making more noise, forever perfecting and using intricate contrivances of sound, making the air, whether it be night or day, hideous with tumult.—Ottawa Journal.

CLUES IN CURRENCY

It may be some consolation to the people of the United States that not one of the gold standard, the Lindbergh kidnapping might have remained unsolved. The ransom was paid in gold certificates, called in by the treasury last year, and it was the rarity of this currency when presented by the suspected kidnapper that brought about his arrest.—Brookville Recorder and Times.

MIXING MAX WITH A.B.S.

One of the best things published in a long time appeared recently in a German Nazi book on an American propagandist. It says: "While Lord Beaverbrook calls himself a Canadian, he is a Hungarian Jew, named Ralph B. Blumstein." This is almost enough to make the Scots, to say nothing of the people of New Brunswick's North Shore, send out the fiery cross and rise in defence of this son of the manna.—Frederickton Daily Gleaser.

CANADIANS BETTER OFF

But when hard times come, there is little doubt about the average Canadian being better off than the average American. This important fact is impressed upon us by an announcement just made by Dr. Robinson Newcomb of the United States Bureau of Foreign and Domestic Commerce after study of figures taken from a survey made last Spring by the New York Housing Authority.

According to this announcement, "New York's typical family consists of mother, father and one child, living in a four-room apartment house costing \$32.1 a month in an apartment house built before any of the three was born. In Canada, however, the houses are considered crowded or overcrowded."

Conditions in our larger cities are unhealthful, there will be, in future years, an influx of new population. That will only come when the amount of employment crisis has passed and when agriculture has become more prosperous. Then the opportunities of the country, and the expansion which will be renewed, will absorb in a normal way a considerable force of immigration.—Winnipeg Free Press.

DEFROSTING CHAMBER

A important advance has been made in the handling of Canadian chilled and frozen products transported by ship and rail. This is a four-room apartment house costing \$32.1 a month in an apartment house built before any of the three was born.

The Canadian Government has constructed a special refrigerated chamber of 20,000 cubic feet capacity at the Port of London, England, for handling chilled and frozen meat. This is the result of experiments conducted by the National Research Council of Canada upon the defrosting of frozen foodstuffs and is operated by the Port of London Authority.

It is designed to prevent the condensation of water vapor from the outside atmosphere upon the products after removal from the ships' holds. This, one of the big bugs in international trade in chilled and chilled products has been removed.—Canada Week by Week.

ROAD IN THE ROCK

Visitors to Jasper Park who have motored along the 34 completed miles of the mountain road that will give Ontario contact with Lake Louise, are agreed that it will prove to be one of the continent's great scenic highways.

It will lie within national parks throughout its entire length and, according to the engineer in charge, will be a year ago there are 375,000 more people at work and earnings wages. It all shows steady progress. If only we could devise means of dealing with the young people who come on the labor market we could make the improvement far more pronounced.—London Daily Express.

INVESTMENT IN ROADS

The provincial highway debt of Canada in 1933 was \$428,000,000 with annual charges of 25% million dollars. Ontario led with \$126,419,000 at 24% millions of interest on the average provincial rate of five per cent. Quebec followed next with \$157,377,000 and \$2,628,000 interest. British Columbia was third with \$60,441,000 and interest of almost two millions.—Dominion Bureau of Statistics.

THE EMPIRE

TRAGEDY OF YOUTH

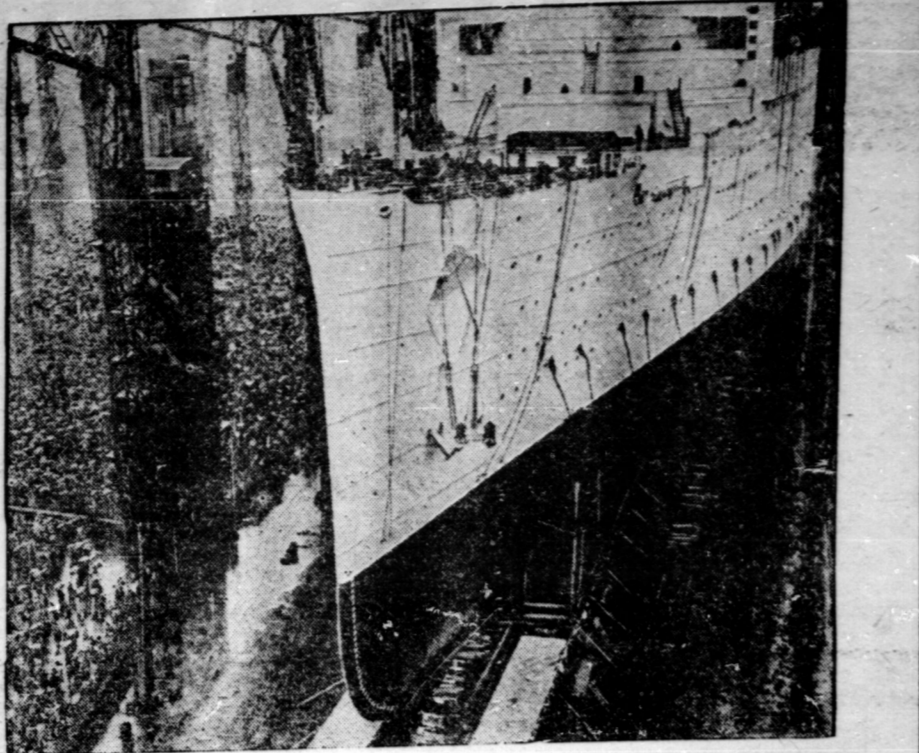

Thirty-four thousand more wage earners in British homes today than a month ago. That is a good result. A big achievement. Compared with a year ago there are 375,000 more people at work and earnings wages. It all shows steady progress. If only we could devise means of dealing with the young people who come on the labor market we could make the improvement far more pronounced.—London Daily Express.

FORTUNE TELLER'S PROPHECY

When a fortune teller in Paris informed Prince Paul he would die a king he laughed. He was far from the succession. Besides, Egypt had a king. In 1913 it looked for a moment as if the prophecy might come true. A king was wanted for Albania. Italy was said to support his candidature. But a German prince was chosen.

Then came the war. His nephew, the Khedive Abbas Hilmi, was deposed. Prince Faisal became Sultan. Two years later he died. Sultan Hussein's son announced his claim. Prince Faisal succeeded. When he was proclaimed the Protectorate in 1922 Sultan Faisal proclaimed himself King. The Paris conference was held after all.—London Daily Telegraph.

Queen Of The Seas

The greatest liner afloat, the gigantic Queen Mary slides down the ways in launching at Clydebank, Scotland, before 250,000 spectators who braved pouring rain to see christening by British Queen.

THE ROYAL SUCCESSION

The discussions to which Prince George's engagement has given rise regarding the succession to the throne have not always been based on knowledge.

So long as the Duke of York's daughters survive they take precedence over any child, male or female, of any of the Prince's brothers. Finally, if the Prince of Wales had first a daughter and then a son, the position which Princess Elizabeth holds today.—The Spectator.

BACON, EGGS AND MUSIC

Sir Henry Wood invented the name of Paul Klenovsky and published his that the music of the foreign Klenovsky made a far bigger noise in Britain than the music of the plain British. Wood. It is a national vice with us to pamper the foreign producer of music. And that goes for beef, bacon and eggs, too.—London Daily Express.

At one of our night spots around the town we overheard a young thing in this conversation:
She:—Have you heard Bob Crosby?
He:—No, I haven't.
She:—Well you can't tell his voice from Bing's. He's marvelous.

She:—And they said that he's trying so hard to get along on his own name, and that he hopes people will listen to him just for his voice. But you really can't tell him from Bing.

Bishop Uses X

SYDNEY, New South Wales.—The Right Rev. Dr. Burman, newly appointed Anglican Bishop of Goulburn, New South Wales, recently put his skill with the X to good use.

On a tour of his diocese in a small car he was prevented from crossing a swollen river. A lorry was obtained to take the party and car across. In order to get the car onto the lorry, some trees had to be felled. Dr. Burman, it is said, himself "swung the donkeys" with the deftness of a royal show woodchopper.

Scheme of Study

TORONTO.—The curriculum should be a close relationship to the needs, lives and interests of the pupils outside of school, says Dr. C. C. Goldring, superintendent of Toronto schools, in a report to the Board of Education.

In particular he advocates a good finishing type of education for those whose interest does not lie along academic lines. To this end, he suggests the development of fifth form classes of various kinds in public schools to provide a complete course of instruction, ending at about the age of 16; establishment of intermediate schools, transferring of lower school work from the secondary to the elementary schools, and establishment in the collegiate institutes of a general course covering two years' work.

Doing Your Best

How easy it is to say, "I'm doing the best I can." Some of you young people always say this as a teacher criticizes your work, or an employer finds fault. Well, it is true that you can do no more than your best, but the point is that too few of you do it.

Some one has said that only ten per cent of the energy stored in coal is used when it is burned in the furnace; the rest is wasted. Experts estimate that human energy also, is largely dissipated. Not even ten per cent is utilized.

Some of you young people say "I did my best," in a very meek voice, as though you were apologizing. When you can honestly say "I did my best," that is all right, but you are making as proud a boast as ever fell from human lips.

Alberta Families Start Trek To No

EDMONTON, Alta.—A state has been made in the exodus of hundreds of families from the drought-stricken areas in southern Alberta to the northern sections of the province. Already 45 caravans have been issued to families ready by the agricultural department to depart. About 100 families are being taken to either this winter or in the spring.

Some difficulty is being experienced in finding suitable locations for the many families. A list of places in the north and northwest has been prepared by the department and has been given to the various families to select their choice. In some cases individual letters are making personal better inspection trips into the north to see the land.

Mr. F. S. Grisdale, Minister of Agriculture, explains that the settlement is being made in areas already well settled and improved farms that have vacant. There are hundreds of the farms listed by the department.

The farm-moving service, which is born by the Provincial Government, are it possible for many farms to be made available to the north with renewed hope of success. The farmers will be taken over by the Government. A scheme to plant wide belts across the country is included in plans for restoring the area.

Strumming Upheld As Musicianship Aid

By London Composer

OXFORD.—To strum or not to strum? Dr. Percy Buck, King Edward Professor of Music at London University, discussed this question when he spoke recently to members of the Oxford Course in Music Training.

He decided unhesitatingly in favor of strumming—even at the cost of quite heroic forbearance on the part of those who are forced to listen to it—because, he said, the child who can sit down at a piano and improvise a tune has acquired more musicianship by doing it than he would have acquired by learning that Bach didn't do it this time." The wises said.

"There is, of course, no great virtue in extemporizing rubbish," said Dr. Buck, "but there is a lot of fun, and when you get fun into music you have gone a long way."

Dr. Buck says that boys are better "strummers" than girls.

Daily Transatlantic Air Service Being Planned

St. John's, N. F.—A projected daily transatlantic air service from the British Isles to Newfoundland has been outlined to the Newfoundland Commission Government by Mr. Chas. Frohner, representing Atlantic Airways, which is to be operated by the British Harbors as a base for flying boats.

Mr. Frohner told the commission the ocean line would link up with the British airways system with Canadian and American systems. For the transatlantic service, planes capable of carrying eight to ten passengers and with a speed of 230 miles an hour would be used.

Heiress Met Her Husband Year Ago

Virginia Gates McCafferty's Marriage Culmination of Romance Begun at Dance

Boise, Idaho.—Virginia Gates McCafferty, 22, nee Virginia Gates, Philadelphia heiress, who hitch-hiked her way into romance and marriage with Dan McCafferty, erstwhile boxer, and wrestler, mechanic and vegetable field worker, is "California bound" with her husband fortified with funds supplied by her wealthy father.

The young couple left Boise "by train" using money telegraphed to them by Thomas Gates the president of the University of Pennsylvania, and a former member of the firm of J. P. Morgan and Company.

Along with this revelation of the heiress' plan came an assertion from the newlyweds that their marriage was the culmination of a romance that began with a meeting a year ago. The blonde blue-eyed bride and her dark curly-haired husband previously had met and hit it off in Moscow, where they were married by the Rev. A. Edgar Parry, pastor of the Moscow Methodist Episcopal Church.

Just say that we are at a rodeo in Pinedale, last year," Mrs. McCafferty told newspapermen. Mrs. McCafferty, then Miss Gates had lived on a dude ranch near Pinedale, Wyo., for 14 months prior to her disappearance from there a month ago. A search in which Federal department of Justice agents participated was started after the girl left the ranch and failed to return to her parents' home.

10 lbs. In Two Months

It is a letter which proves that the northern sections of the province. Already 45 caravans have been issued to families ready by the agricultural department to depart. About 100 families are being taken to either this winter or in the spring.

Some difficulty is being experienced in finding suitable locations for the many families. A list of places in the north and northwest has been prepared by the department and has been given to the various families to select their choice. The farmers will be taken over by the Government. A scheme to plant wide belts across the country is included in plans for restoring the area.

MacFarlane Long Lac Gold Mines Limited

A report received recently at Head Office of MacFarlane Long Lac Gold Mines, Limited, from A. B. Farrell, resident superintendent in charge of the Company's operations in the district, advises that surface exploratory development work with an increased crew of men has been largely expanded in an attempt for new valuable ore discoveries and to obtain as much information as possible before further surface work is undertaken. The latter will be diamond drilling and sinking a shaft.

MacFarlane Long Lac Gold Mines Limited

Mr. Farrell's recent field work has discovered two mineralized quartz veins that have every physical appearance of containing gold values. Samples have been taken and assayed. The results have been encouraging. Several more veins are being searched for and enlarged for several hundred feet with gratifying results.

Main ore No. 2 shear zone has indicated a total distance of 1500 feet with there being every indication of the continuing of this ore distance further. The Tellurium Mines adjacent to the East boundary of MacFarlane, advise that they have made a discovery which has similar vein characteristics to the "Main."

Canada Has Corros on Hard Rock

According to Country Guide, two weeks ago was an eventful one in the field market. There had been many wild rumors and wild things had settled down a bit, the air is not yet clear. John I. McFarlane, in charge of the government wheat operations, claims that there is a heavy selling in the market when the farmers are delivering their wheat. When the weather broke and deliveries at county elevators dropped off there were several times as much selling as usual.

An investigation into the operations of the market was suggested. This was followed by a heavy selling movement, apparently of a local nature, which sent the price down 6 cents in two days and the government agency had to absorb the wheat to prevent a price collapse. But the lower price began to bring heavy export orders and by opening this Saturday of the week the market had recovered about half of the lost ground, without assistance in the rise by the government agency. Argentine wheat fell some 10 cents and that country is determined to get rid of every bushel of it before the new harvest begins around the turn of the year. But the fact remains that the only hard red spring wheat available in the world is the Canadian surplus.

So They Say

"It is one of the defects of modern world that people get pleasure from pleasure that is not pleasure."

"We can have our children proved by education and by revolutionary violence," Elmer Barnes.

"I think the time is coming when our economic order will be adjusted along lines that permit gain for the few," Sybil Thurntable.

"In America by the time it comes to trial 'hell' has been put into full force of old age."

"Capitalism is not dead yet," it needed a good deal of Roger W. Babson.

"The future belongs to the man of the sea,"—Havelock Ellis.

FINANCIAL FLASHES

What promises to be a gold discovery of major importance, the first of the rich silver and radium ore deposits of the Great Bear and other junction with the North West Arm of the Yellowknife River area near the Yellowknife Gold Mines, Limited, has just arrived in Toronto with a party in gold ore, chiefly quartz, and leaves with galena, arsenopyrites and pyrites visible as secondary mineralization.

Several groups of claims were staked and a limited amount of surface work done. The spectacular discovery was made on the "Rich" junction with the North arm of the Yellowknife River area near the Yellowknife Gold Mines, Limited, has just arrived in Toronto with a party in gold ore, chiefly quartz, and leaves with galena, arsenopyrites and pyrites visible as secondary mineralization.

Canada May Sell Egypt Potatoes

For the month of September, production of this company's property in the British River area amounted to \$283,000 as compared with the record crop of \$383,000 in the previous month, \$188,000 in September 1932. Net after depreciation, depletion and taxes is shown at \$189,000 as against \$148,000 in August and \$121,000 in the same month in 1933.

The price for the white metal continues to rise and at time of writing this item it is at the highest point since 1929. Undoubtedly the continuing demand by the United States is largely responsible for the increased price and ever rising indications that further rise in price may be anticipated. The market for Canadian silver is very firm and the demand for stocks in this class is increasing.
