Subscription Rates

\$2.00 a year in advance; \$2.00 a year to subscribers in United States.

The date to which a subscription is paid is indicated on the address label.

Advertising Rates

Small advertisements—For Sale, To Let, Wanted, Lost & Found; Wedding Events, etc.: 25 words and under, 25c; one cent for each additional word. Cash. If charged, 1 1/2 cents per word.

Contract advertising—Send for rate card.

Marriage, Divorce, Death—Free in Memoriam and Engagement Announcements—50c; 75c, 4 lines; 10c, one insertion.

Advertisements without specific instructions will be inserted till for sale and charged accordingly.

GEO. L. MILLER

Editor and Proprietor

The textile strike in the United States in one of the biggest strikes in history. The strikers will lose in the neighborhood of \$7,000,000 weekly while the employers will also be minus many millions. These long time it takes for them to be reached sufficiently. Musicians before they will arrive at some agreement?

Last Thursday marked 100 days the Dionne Quintuplets have enjoyed life. The day passed quietly at the Dionne home with nothing unusual to mark events. On September 24th the Dionne Hospital was opened opposite the Dionne farm with the Hon. David A. Croft officiating where the Quintuplets will be given the very best care.

Many of the Highway ditches filled in by the Herry Government are still dug out by the present administration we understand. What a profitable enterprise for the taxpayers. Surely everyone will grant the former government with some knowledge of what they were doing and most certainly digging the ditches out will not be considered an act of economy by the present administration. The ditches have been filled in in England for years and apparently are satisfactory to that country.

One of the most remarkable developments this year at the Canadian National Exhibition is the demand by exhibitors next year for exhibiting space. This would indicate that the Canadian National Exhibition is no longer a Toronto Fair but an international exposition that is attracting people from all corners of the earth that result in stimulated trade all over. Yet our own, the Ontario Government fail to realize this great medium of advertising Ontario Products, in hopes of executing economy in the best interest of the taxpayer.

The abolition of the Ontario Office in London England by the Herry Government seemed to meet with the approval of the majority. But it must be remembered that Mr. Noxon was not idle to his position while in England. Two items alone of great export interest to this district became valuable through his efforts and The Ontario Office. In the last four years the increase in the export of Ontario apples has reached over 300,000 barrels. Is that a detriment to Ontario? All through the efforts of the Ontario house we are now exporting around 12,000,000 lbs. of Tobacco a year, chiefly from Norfolk, Essex and Kent. Therefore the Ontario Office in London has been more than a picturesque reminder to Britons of a far land.

WEEKLY NEWS LETTER

The Maintenance of Soil Fertility

A more permanent agriculture for Southwestern Ontario will require a more definite soil building program than has been practiced in many farms in the district during the past decade or two. Have we become so interested in cash crops in many districts that we are overlooking some of the fundamentals in the maintenance of soil fertility? Shall we be able to maintain soil fertility and crop yields under many of our present systems of farming? In our whole programme on the average farm definite enough to insure improvement rather than decline? These questions deserve the serious consideration of the man who is thinking of the future as well as of the present possibilities of his farm.

We certainly have access to better seed today than was available thirty years ago. However, good seed alone will not insure continued good yields. The humus in the soil and soil fertility must be maintained as well. These facts are borne out in the various rotation studies on the Dominion Experimental Station, Harrow, Ontario.

While making the place of barnyard manure in a soil building program, the available supply is entirely inadequate to meet the demands of our soil. In most sections of Southwestern Ontario, where an adequate amount of manure is not produced on the farm, either more livestock should be kept or green manure should be produced in the soil by the use of such soil crops as sweet clover, rye, and alfalfa. After all, a green manure crop is the cheapest method of adding humus to the soil. Alfalfa, as well, should play a much more important part in

4. EQUIPMENT NECESSARY

YOU read, in our last article, of the two traps, placed at Stations 1 and 2, respectively. It is essential that the traps be housed. Apart from the weathering protection that this affords, protection must be given to the two trap boys. Both houses may be of exactly similar construction, except that the high trap at Station 1 must be raised to bring the trap door 10 feet off the ground, while the low trap at Station 2 has the door 3 feet up.

Traps may be obtained for very little money, although, of course, better ones may be bought for more money. Your local sports-goods dealer will gladly get you complete descriptions of various makes of traps—of course, the better they are, the more satisfactorily they will operate. On the whole, though, it is as well to keep the lay-out as simple as possible. It is the most practical in the end.

Gun racks are a necessity. Any carelessness in standing or laying down of guns should be absolutely prohibited. Safety nets, too, made of chicken wire or fish netting, should be erected behind each trap house. These will prove to be a decided economy and will save many clay targets.

Later on you may want to build a club-house to provide a pleasant place for your members to congregate between rounds or during stormy weather. This again will depend upon your tastes and resources, and may be built so as to lend itself to expansion as the club grows. Windows should overlook the field, and the door may be placed at one end. Of course, with this as with other items of equipment, the cost can be kept down at the start. You will find that the day birds are also very inexpensive—amazingly so, when one has experienced the thrill that they supply.

This is No. 4 of a series of 12 articles on Sheet Shooting. Cut it out. When all have been clipped, you will have a complete write-up of this sportsman's sport which is rapidly becoming the rage across Canada.

our soil building programme. It is the cheapest and most productive hay crop we have, and, in addition, should be utilized for pastures much more than it is at present. A more definite soil-building programme, coupled with good soil management, will certainly result in a more permanent and profitable agriculture.

During the reading of the minutes of the last meeting is a good time to remind that new story if you whisper.
