THE PROPER CARE OF YOUR AUTOMOBILE

THE danger of neglecting the closed car top was explained in the previous article. All of this can be avoided by starting care of the top when the car is new. Then, all that is necessary is to rub in a little high grade wax dressing every two or three months. The wax filters out the ultra-violet rays of the sun and prevents weathering.

Even though this care is not taken the formation of cracks can be prevented. When the original finish has lost its film strength, the top should be re-finished with a properly formulated top dressing, which renews the protection.

It is unwise to apply top dressing before the check marks appear. The Next: "Care of Top Mouldings."

Next: "Care of Top Mouldings."
