Commentary on the Highlights of the Week's News

By Elizabeth Eady

THE NEXT SESSION: The House of Commons at Ottawa cannot afford to remain up for long. There's a new Canada-United States trade agreement in the offing, the pressure of world events is more concentrated than ever before. So Parliament will likely reconvene in October. If it doesn't, it should...

The next session cannot help but be interesting. In the meantime the Quebec and Ontario provincial governments will have shot off a few fireworks, most embarrassing to Ottawa, and rumors of an early general election will have become increasingly persistent throughout the land.

Who knows but that it may be a momentous session, too, capable of reshaping the destiny of Canada?

Maybe so, but we very much doubt it.

OUT TO BEAT NATURE: The West is facing the best crop prospects in eight years, but while looking forward with much joy to a beautiful harvest, grain farmers nevertheless are mindful that there is no guarantee that the drought of 1936 will not strike again next season. They are grateful, then, for the work that is being done by the Dominion Government to produce a grain that will stand up against a lack of moisture. The first Canadian experiment in search of such a wheat are being carried on at Swift Current, Saskatchewan.

The scientists at work on the job haven't progressed very far yet, but they believe they are on the right track. Should they succeed in finding a drought-resistant wheat, they will receive as much recognition as came to Sir Charles Saunders for discovering Marquis wheat. This famous grain overcame the menace of early frosts, but could not withstand the onslaughts of rust and drought. Now, rust-resistant wheat has superseded Marquis on the prairies.

Thus only one of the three major crop enemies remains to be overcome. Once this objective is achieved, the Canadian West should be unconquerable.

ESCAPING THE HEAT: Down here in Ontario we have plenty of reason to complain of the heat these summer days. We pant, puff, perspire from dawn to dark. We would feel less sorry for ourselves, however, if we passed to

THE WEEK'S QUESTION: Who is frequently said to be the most unpopular diplomat in Europe? Answer: Colonel Josef Beck, Poland's Foreign Minister.

campaign without assistance from Canadians because of the large number of ducks hatched in this country.

Ducks Unlimited "We believe we can multiply ducks to an almost unlimited extent and with your co-operation we are going to put forth our best efforts," Russenbult said. He cited the experience of the state of Maine which, through 40 years of game conservation, now has an annual revenue of \$25,000,000 from fish and game.

Gas Meters in Taxis The Japanese are getting anxious about their war against China. They've just decided to ration their petrol supply. In future, motorists may purchase only one gallon of petrol a day—taxi drivers may have seven. Taxi-fare drivers may have seven. Taxi-fare drivers may have seven. Taxi-fare drivers may have seven.

Eager to Learn "Requests of Indian women that meetings sponsored by the department be devoted to work shows the interest they are taking in their work," Dr. Robertson said. "Indian women, young and old, are eager to learn."

At the meetings they are being instructed in sewing, knitting, painting, crocheting and other household arts. Dr. Robertson believes craft work has improved 50 per cent in many Indian homes in the past few years. Children are learning to spin in schools and are teaching others in homes.

Move to Save The Wild Fowl Canadians Are Asked to Co-operate With American Sportsmen.

NORTH BATTLEFORD, Sask.—Canadians were urged to co-operate with American sportsmen in their fowl conservation efforts by B. D. Russenbult, assistant manager of Ducks Unlimited, in an address here. He said United States sportsmen could not carry out their extensive

Radium Must Be Coaxed From Ore

OTTAWA.—The method by which Canada's sub-Arctic deposits of life-saving radium are "coaxed" out of the pitchblende ore mined on the shore of Great Bear Lake near the Arctic Circle have been revealed for the first time.

Marcel Pochon, chief chemist of the Eldorado Gold Mines, Limited, and E. J. Wall, mine engineer, described to the American Association for the Advancement of Science at its summer meeting the methods used in mining, transporting and refining radium.

It's Roasted First Radium might be called a "coy" element, the Eldorado company specialists declared, since it is very difficult to extract from the ore. It is a trace element which occurs in combination with it. In early refining operations, silver was considered a nuisance in efforts to pull

the radium out of the pitchblende ore.

Today, however, these and other difficulties have been largely overcome by new chemical methods employed in a recently completed refinery at Port Hope, Ont., and both the radium and silver can be extracted without waste.

The ore is first roasted in furnaces and washed with large quantities of acid to remove the silver and uranium. The ore which remains is then treated with tremendous quantities of barium and sodium chemical which physicians introduce into the stomach and intestines as a contrast material in making X-ray photographs.

Radium Salt Is Left The barium is the "coasting" material which pulls radium into affinity with itself, Pochon explained, but 2,500 grams of barium must be used to pull one gram of radium out of the ore. A total of six tons of chemicals must be used to treat one ton of concentrated ore.

Names in the News

KONRAD HENLEIN North America has its Edgar Bergen and Charlie McCarthy, Europe at the present moment is being treated to a similar exhibition of ventriloquism by two no less prominent figures than Adolf Hitler and Konrad Henlein. Hitler speaks but the words appear to come from the mouth of Henlein, who as leader of the Sudeten German party in Czechoslovakia, is calling for union with Germany.

Henlein is only 40 years old. Nevertheless he fought in the Austrian army (like Hitler) during the Great War, was wounded on the Trentino front, captured by the Italians and sent to a little island in the Mediterranean where he mastered the Czech language, became an adept at gymnastics.

After the peace treaties, he found his native town was now part of the newly-created Czechoslovakia, and he himself, born of German stock, was one of the minority.

Organized Athletic Union Henlein worked as a bank clerk for a while, became dissatisfied with his position, and turned to gymnastics at Aachen, near the German border.

Year 1928. Of a total population of 290,000, 50,000 persons are very near it. More than 100,000 are within the radius of 100 miles. In some cases distances are as little as 10 miles. The town has driven people to open up agricultural conditions.

Reasons for Hard Times The four are: Suspicion of Cander, distrust of the police, change of opinion in the business community, and the fact that the newspaper company, Bonanza Limited, fathers of the paper, had been taken over by the government.

On Mistress Also Oliver Here sleeps, past earth's clinging. A woman, true as pretty. Who was herself in love. Her lightest turn of foot—head. Was way of wind with water. So with wind and water said—

Poverty Common In Newfoundland ST. JOHN'S, Nfld.—Newfoundland's employment problem generally was said to improve during the last six months despite high hopes held at the beginning of the

Sanctuary As National Park

Jack Miner's Place at Kingsville Is Both Haven for Birds and Beautiful Parkland

By Lance Conner

Far better known for his championship of the principles of wild life conservation, Jack Miner, of Kingsville, has been named as the first of a new series of national parks in Ontario.

Miner, who has been named as the first of a new series of national parks in Ontario, has been named as the first of a new series of national parks in Ontario.

Miner, who has been named as the first of a new series of national parks in Ontario, has been named as the first of a new series of national parks in Ontario.

What Science Is Doing

Fish Out of Water Dr. A. G. Huxford, of the University of Toronto, says in the current issue of "Science" that fish out of water do not die of suffocation but of over-excitation of the muscles of the fish in their normal state and when exhausted after a struggle when the fish are out of water.

Decrease Tuberculosis Deaths A four hundred per cent decrease in the number of deaths from tuberculosis among young children has been brought about recently by the use of tuberculin vaccine, the American Association for the Advancement of Science was told at Ottawa early this month.

Development of Immunity The development of immunity to the "white plague" among children, the most common cause of death among infants, has been achieved by the use of the bacillus calmette-guérin vaccine, originally developed at the Pasteur Institute in Paris, France, more than ten years ago.

Swiss Abolish Death Penalty Swiss voters in a national plebiscite last week adopted a new Federal penal code, aimed at unifying the canton codes, of which the country formerly had 25.
