

Ontario's 11-Ton Cheese Of 1893

"Mite" Was Shown At World's Fair In Chicago
Manufactured At Perth, Ontario

Doing a bit of doling in the attic of his Detroit home, Charles H. Haight, 89-year-old native of Newmarket, Ont., has come up with his 11-ton cheese, Chas. H. Haight's "Canadian Mite," a mammoth 11-ton cheese that was one of the features of the Canadian exhibit at the exposition.

The folder explains that the "Canadian Mite" was manufactured at the Dominion Experimental Dairy Station at Perth, Lanark County, Ont., under the supervision of Prof. James W. Robertson, Dominion dairy commissioner, and formed a part of a pyramid of Canadian dairy products.

Some 207,200 pounds of milk were used in its manufacture, a quantity equal to the milk for one day in September of 1893. The cheese, weighing 22,000 pounds net, was increased in a mould of steel and a pressure of more than 200 tons was applied to make it perfectly solid. It measured 28 feet in circumference and 6 feet in height.

What's Going On Inside The Hive

Beekeeper Can Find Out By Weighing Hives Daily To See How Fast The Honey Is Coming In

Beekeepers have a unique method of keeping tabs on the activities of their bees, according to a report from the Dominion Experimental Station. Because it is so essential to know how the honey flow is coming into the hives, one hive in an apiary is placed on a set of scales.

Thus it is possible to take daily weighings and so tell just how much honey is coming in. Furthermore, it is possible to know accurately the amount of loss of honey in the hives, particularly in the Spring, when the flow of nectar is light. Then the beekeeper can tell whether or not he should feed his colonies.

During the main honey flow, the scales are most valuable, for then the beekeeper can estimate fairly accurately just what is going on in the colonies. Thus, he knows when proper attention should be given.

Modern Etiquette

BY ROBERTA LEE

- 1.—Are there any certain occasions when a man precedes the woman he is accompanying?
- 2.—When an invitation is received to a church wedding, does it require a response, does it require an answer?
- 3.—Is it good taste to use either blue or green ink in social correspondence?
- 4.—When a man brings a guest to his home and introduces him to his wife, is "How do you do" a sufficient acknowledgment for the wife?
- 5.—When eating in a strange place and you do not know whether to pay the waiter or not, what should you do?
- 6.—What are the most popular forms of Sunday entertainments?

Answers
1.—Only when the way is uncertain or dangerous, such as when necessary to push their way through a boisterous crowd. 2.—Not unless the wedding is small and the invitation is a personally written note or letter. 3.—Only black ink should be used for both social and business correspondence. 4.—No. In this instance the wife should be a little more cordial and add, "I am very glad to see you," or some similar expression. 5.—Merely ask the waiter, "Where shall I pay?" 6.—Breakfasts, luncheons, teas, suppers, and musicales.

100th Year Begun By Cunard Line

The Cunard Shipping Line, founded by Samuel Cunard, of Halifax, N.S., entered its 100th year in the trans-Atlantic steamship trade July 4. The inaugural voyage by the "Inaugural," which merged with the White Star Line five years ago, started July 4, 1840, when the Britannia headed out from Liverpool, England, for Halifax and New York.

The output of central electric stations in Canada during 1937 was 2,335,235,000 kilowatt-hours. This was a gain of 12.1 per cent over May, 1935, and was the highest May output on record.

Scene Of Fatal Mauling

Seen being fed by a keeper are two of the three bears kept in the Quebec Zoological Gardens at Charlebourg, P.Q., who clawed to death the Dominion Experimental Station. Because it is so essential to know how the honey flow is coming into the hives, one hive in an apiary is placed on a set of scales.

How Can I?

BY ANNE ASHLEY

Q.—What is a substitute for cream of tartar, when mixing cake that calls for it?
A.—A good substitute is buttermilk. If the buttermilk is not sour enough, add a little vinegar.

Q.—How can I keep apples from turning brown when peeling them?
A.—Add a pinch of salt to the water in which the apples are washed, before peeling them, and they are not as liable to turn brown.

Q.—How can I remove wine stains from fabrics?
A.—Cover the stains with salt and then pour boiling water through the fabric.

Q.—How can I prevent new towels from rusting?
A.—Before using new towels, rub the surface thoroughly with lard and place it in a hot oven for an hour. This will prevent subsequent rust.

Q.—How can I make sure of eliminating any insects which may have gotten into a head of cauliflower?
A.—Stand the cauliflower head down for a few minutes in a salt or vinegar solution.

Q.—How can I make sure of eliminating any insects which may have gotten into a head of cauliflower?
A.—Stand the cauliflower head down for a few minutes in a salt or vinegar solution.

Clear The Decks For Hot Weather

Make Your Housekeeping Much Simpler And Give A Sort Of Picnic Air To Your Home

There are dozens of things that can be put away for the hot months, to make housekeeping simpler and at the same time give a sort of picnic air to the house. Roll up the dinner room rug and tote it up to the attic to stay until fall. Set the table right up to the windows, country style, so whatever breeze there is will cool us off while we eat. Having no curtains of draperies, helps to complete the vacation effect. Put away all superfluous bric-a-brac, and the living room, with small scatter rugs, is a place now to park in with joy.

Heat and strong light put an extra strain on nerves. Therefore it seems to be extremely sensible to shade all rooms from glare. In the south they prepare for heat, sensibly, and arrange their schedules much better than we do. We could take some lessons from their example, and mothers with families, would find the afternoon siesta a plan worth trying.

Low Temperature Prevents Mould

The housewife who likes to serve a variety of breads at each meal finds herself faced with rapid bread spoilage when warm, damp weather arrives. If bread is wrapped in fresh waxed paper and stored in the refrigerator instead of the bread box, she will find that the loaf should stay fresh and unspooled for several days longer.

Big-Money Dwarfs

"Snow White" is expected to draw another \$2,000,000 abroad. Previous record was made by "The Singing Fool" which earned about \$5,000,000.

The Best Relief For Poison Ivy

Comes From The Use Of Potassium Permanganate In Severe Cases

Poison ivy as a plant has many guises. It may appear as a low shrubby patch, or as a fence border, or as a climber like the Virginia creeper. Each form has its own leaves. These of the Virginia creeper are in fives.

In severe cases of poisoning by the ivy, the treatment most widely recommended is potassium permanganate which has for its purpose the destruction of the poison by oxidation. The parts are washed with a three per cent solution, made somewhat weaker if the skin is particularly sensitive. Once blisters have been formed, rubbing should be carefully avoided. It should be soda, boracic acid, or other cooling substances are used, no application should be made when the sores are oozing. Others who are not so severe, the conditions may be formed. A pamphlet giving full information may be obtained free from the Publicity and Extension Division, Dominion Department of Agriculture, Ottawa.

"The guy says he wants rice pudding." "The other excused himself, and hurried over to the stove." "Did you call me?" he asked. "Look here, you," he growled. "Are you trying to tell my customers what they should eat?"

Have You Heard

There were dark shadows under his eyes as he sank into the barber's chair.

"Haircut, please," he replied to the barber's polite greeting.

"Then please sit up a bit," said the barber. "You're rather far down in the chair for a haircut."

"Then give me a shave," murmured the man wearily.

"Do you ever go camping?" "No, we get the same effect by taking the screens off the windows."

An American was touring Wales, and on entering a hotel in one town noticed the words "Tam Htib" written on the wall.

"No, sir," replied the doorman. "That's the both mat upside down."

Advertisement—in a Titusville, Pa., paper:

"Accommodations in my special line of business. Prices very reasonable. If I am out of arrangement dates with my wife."

A self-voiced man walked into a luncheon room the counter-man was a trifle hard of hearing.

"Nice pudding," said the customer.

"What's that?" "Nice pudding," repeated the customer.

"The other cupped a hand to his ear.

"Sorry," he apologized, "I did not hear you."

Also here, sitting at the end of the counter, became annoyed.

"Listen, tin ears!" he shouted.

What Science is Doing

SMALLEST LIVING PARTICLES
A scientist behind an ultramicroscope reported last week he had been able to see and measure proteins, molecules, the key units and possibly the smallest particles of living matter. The molecules stood out as shimmering spots of light.

SUPER-ACCURATE CLOCK
A new kind of clock so accurate under ordinary conditions that it may be used for astronomical observations with higher precision and engineers to control difficult variations in alternating current has been invented. The instrument maintains accuracy to within one second at all times during any 24-hour stretch.

REVIVED AFTER 200 CENTURIES
It is reported that living organisms dating back 200 years have been revived by Soviet scientists, after a long sleep in frozen soil.

Species of water plants and fungi and also soil bacteria were found in a state of suspension in the frozen soil strata of Eastern Siberia near the homes of extinct mammoth bones.

Soviet scientists, using nature's refrigerator in the Arctic for their experiments, have been seeking to locate the boundary between life and death for many years.

Business Trend Slightly Better

Three Per Cent Improvement Shown In First Half Of 1939 Over Same Period Of 1938

Business barometers for the first half of 1939 indicate a three per cent improvement over similar period of 1938.

Lumber and nickel exports for May, 1939, show 25 to 35 per cent over May, 1938.

Copper exports and loadings up to 15 per cent.

United States markets taking a lot of Canadian cattle, shipments showing 300 per cent increase as compared with corresponding period last year.

More Lumber, Nickel Exported
Output of Canadian gold in the first four months of 1939 valued at \$7,000,000, a gain of 12 per cent over corresponding 1938 period.

Eighty million worth of gold in Canada and a dozen more planned.

Manufacturing operating on a higher level than a year ago, particularly in footwear and foodstuffs, including flour and sugar.

Motor car production down nine per cent from last year, but picking up at end of first five months of 1939.

Bank deposits, commercial loans and deposits in a rising trend.

In external trade Canada has a satisfactory balance of exports over imports.

THE PROPER METHOD OF HANDLING EGGS

Egg quality is determined by the manner in which they are handled. Proper attention will prolong the freshness of the eggs which eggs held in a cool, dry place, away from sunlight, will keep longer than those which are exposed to heat and light.

More Cancer Than Ever In Canada

Public Will Be Asked To Assist In Fight; Committees To Be Formed In Major Hospitals

A renewed fight against cancer in Canada with cancer committees to be formed in major hospitals, was forecast by Dr. S. McEachern, of Calgary, chairman of the association's cancer committee. He told the General Council of the Canadian Medical Association in Toronto, the public would be asked to assist in the fight against cancer.

Unemployment and discouraging economic conditions were largely to blame for the alarming increase in criminal activities among young people, he admitted.

"But poverty is not altogether to blame," he said. "It must be remembered that many of our leading citizens of today were raised in similar poverty. Their homes 50 years ago were often poor in material things but they were spiritually rich. In those days children learned high moral and civic standards that did not break down under hardships."

One Of The Forlorn Scenes In Recent Kentucky Flood

Following a disastrous cloudburst that poured tons of water into small streams that in turn swept down over many communities in eastern Kentucky, citizens, state officials and Red Cross workers are digging out from the pits and debris, and each day finding a few more bodies of victims of the deluge which was so sudden that many never had a chance to seek safety. Shown above is a scene from the stricken zone around Morehead; the taxi was hurled into a ditch and a house half swept over on top of it.
