Ontario Cows Have Big Job To Sully Cheese Quota

Ontario Department of Agriculture Suggests Grain Mixtures for Satisfactory Conditioning Night Now.

Ontario cows will have to supply the greater portion of the milk needed to manufacture 112,000,000 pounds of cheese requested by Great Britain this year.

Many cows fresh with a reserve of energy so small that they are not capable of the maximum production of cheese.

It is recommended that good quality roughage be fed to the freshening cows and grain feeding be practised to build up their condition.

Home grown grains are reasonably satisfactory for conditioning, al-

though some protein supplement is necessary if the hay is of poor quality or the cows are fed largely on straw.

The following grain mixtures are recommended to fit cows for lactation: (1) oats, 200 pounds and barley 100 pounds; (2) oats 200 pounds and wheat 100 pounds; (3) oats 200 pounds and buckwheat; (4) oats 200 pounds and barley 100 pounds and wheat 100 pounds.

The above mixtures can be improved by the addition of a small amount of linseed oilmeal, bran or soyabean meal. Feed the concentrated mixtures at the rate of TWO TO SIX POUNDS PER COW PER DAY depending on condition and the price of the feed materials.

Previous to calving and immediately after calving, cows should be fed a grain mixture that contains more laxative and cooling qualities and the following are suggested: (1) oats 200 pounds, linseed oilmeal 100 pounds and bran 100 pounds; (2) oats 100 pounds, linseed oilmeal 50 pounds and bran 100 pounds.

Do not feed heating, constipating feeds such as barley, rye or cottonseed meal at freshening time.

Good Seed Brings Assurance of High Quality Crop, Says Ontario Department of Agriculture.

If Ontario potato growers hope to bolster sales in their own province they must first of all obtain the best possible seed potatoes and CERTIFIED SEED IS THE BEST.

Good seed is fundamental to the production of good crops of high quality potatoes regardless of whether the crops are intended for seed or table use.

Freedom from disease for desirable good appearance they may carry freedom from recognizable insect damage but which may seriously affect the yield and quality of the crop.

Certified seed does not mean seed potatoes entirely free from all diseases and blemishes, for such a result is not possible under present conditions, but every effort is made to certify potatoes only from fields that are practically free from disease and where plants are vigorous and true to variety.

Commercial potato growers whose potatoes are heavily infested with insects will find it decidedly advantageous to plant certified seed of a true variety that are available, even though they may not ordinarily be considered as the most suitable varieties for their particular district.

If the official list is not on each and every certified seed variety, it is important to note that the official list is not on each and every certified seed variety, it is important to note that the official list is not on each and every certified seed variety.

A grower can have no assurance of a good marketable crop of high quality potatoes unless he uses good seed.

THIRD ANNUAL SEED FAIR The Halimand Corn Improvement Association will hold its third annual seed fair to be held in the Town Hall, Cayuga on Thursday and Friday, March 14th and 15th.

Good seed is fundamental to the production of good crops of high quality potatoes regardless of whether the crops are intended for seed or table use.
