

**Royal Bank Appointments**

T. H. Atkinson, whose appointment as Assistant General Manager is announced by the Royal Bank of Canada. Mr. Atkinson was formerly Super. for 12 Branches for Quebec, New Brunswick and Eastern Ontario.

Newly appointed Assistant General Manager of the Royal Bank of Canada, Mr. Moffitt has been Supervisor of Investments since 1940.

**Modern Etiquette**  
By Roberts Lee

1. What should a man do if a woman makes a social call at his home and he is late for dinner?
2. Should one repeat the hour when accepting or declining a formal dinner invitation?
3. Is it correct for a guest to telephone if he is late for dinner?
4. When place cards are used for dinner, should one write Mrs. John Smith, or just Mrs. Smith?
5. Where should the male guest, who is second in importance to the guest of honor, be seated at dinner?
6. Should men always shake hands when they are being introduced?

Answers  
1. He may, at the first opportunity, rise and tell her he is glad she stopped in to see him, but even this is not always effective.  
2. The hour should be repeated when sending an acceptance, but not when sending regrets.  
3. Yes;

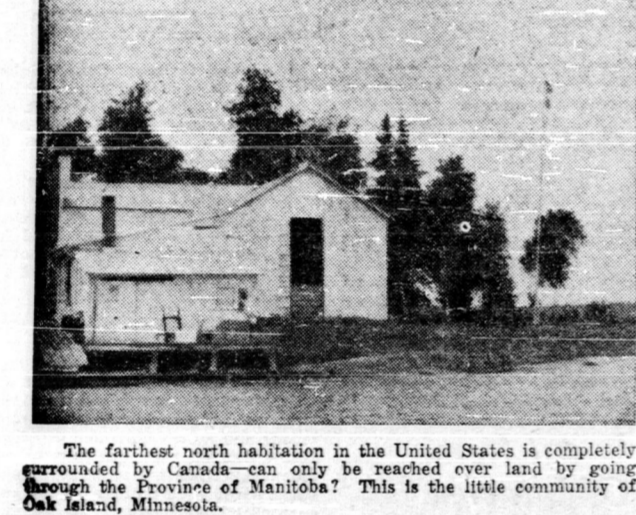

**WHAT SCIENCE IS DOING**

**"Zenith" Cameras**

Fitting of war area maps made from aerial photographs into exact locations on charts of continents and islands—hitherto a major military headache—has been simplified by development of "zenith" cameras.

Described by army engineers as "unbelievably accurate," the camera permits soldiers who know nothing of astronomy to perform feats of celestial navigation that would be a source of pride to the most exacting mathematician.

**DID YOU KNOW THAT?**

The farthest north habitation in the United States is completely surrounded by Canada—can only be reached over land by going through the Province of Manitoba? This is the little community of Oak Island, Minnesota.

**CANADIAN PARATROOPERS TRAIN IN ENGLAND**

Crack Canadian paratroopers may be in the vanguard in any future Allied assault on Europe. Some interesting aspects of their training in England are dealt with in these photographs. Top left—Friede in his accomplishment is reflected by the sewing efforts of this Canadian paratrooper sergeant after qualifying for his jumper's wings. Top right—The only jumping padre in the Canadian Army—Hon. Capt. G. A. Harris—is shown in paratrooper's equipment. He was formerly minister at All Saints Cathedral, Winnipeg. Lower left—Learning how to land without injury, the husky Canadian paratroopers come down chute onto a "landing ground" at about the same speed as they would descend by chute. Lower right—Canada's only Negro paratrooper, Pte. C. C. Waterman, of Toronto, who recently gained his jumper's wings. In 1940 he was a Golden Gloves boxing semi-finalist in New York.

**Foresters Return From Scotland**

Canada's "Sawdust Fulliers" Have Been Working In Scottish Forests

Part of the Canadian Forestry Corps is coming back to Canada from Britain. Let some imagine that the return of these units means a withdrawal of Canadians from a fighting front. They are coming home so that they may do a better job than they are now able to do in Scotland, where the great majority of them have been stationed almost since the beginning of the war.

The "sawdust fulliers," as the Scots dubbed them, are all volunteers, all skilled woodmen who are at the same time highly trained soldiers. Drawn from all parts of the Dominion, the Corps includes four hundred Quebec lumberjacks, men who were overtaxed to supply the enormous quantities of lumber required by British and Allied fighting forces on many battle fronts.

**Away Four Years**

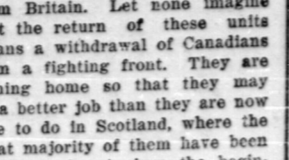

Britain normally obtained a great deal of its timber from Scandinavia, but with the Nazi invasion this source was cut off. Canada could of course supply great quantities, but the submarine made transportation difficult. It was in these circumstances that the idea developed of sending, not lumber, but skilled lumbermen to work in the Scottish Highlands where timber abounds. For more than four years they have been cutting more than a shipload of lumber a day.

Now Scottish resources are dwindling as to both quantity and quality, and we have so far not managed to substitute as to make shipping from Canada less difficult. So the "Sawdust Fulliers" are coming home to resume their work. They should receive a rousing welcome while they have not been firing line itself, they have been cutting line itself.

**The Direct And Indirect Effects Of The Air Assault On Germany**

most effects of the great bombing campaign for 1919, believing that nothing less would suffice to break the military strength they knew the enemy still possessed. Happily, the campaign was unnecessary, but the commanders were right in their action, and we may well emulate them today.

Scientists dealing into the possibilities of the soy bean have not yet explored all its uses. Industry has only begun to make use of this remarkable plant. The mature seeds of the soy bean have a very high oil and protein content and the oil may be used wholly or in partial replacement of other oils in vegetable, shortening, margarine oil, paints, soap and linoleum. It is valuable as a concentrated protein feed for live stock. Where human nutrition is concerned, diet deficiency diseases, pellagra and rickets are unknown in those areas of the Far East where soy beans have been used in human diet. Two and one half pounds of soy bean flour has been found to contain the nutritive equivalent of 54 eggs or three quarts of milk and it has more of the essential mineral vitamins, enzymes and phosphates than are found in any other field crop.

In the contemplation of the multiplicity of uses, the immediate use should not be overlooked by farmers—the effectiveness of the soy bean in controlling couch grass. By continually cropping infested land with soy beans the weed can be completely smothered in record time.

Other crops are known to help control couch grass, but it has been proved that soy beans give by far the best results. An experiment recently concluded at the Central Experimental Farm in Ottawa disclosed some interesting facts. Four crops—soy beans, corn, buckwheat and alfalfa—were grown continuously for four years. In preparation for all these crops law ground was fall ploughed. Both soy beans and corn were cultivated five times and bred two during each growing season. Before seeding the buckwheat and millet the land was worked to keep down the growth of couch grass and give these another crop a good start.

At the end of the first year only 6 per cent of couch grass remained in the soy bean plot, there was 20 per cent left in the corn and 50 per cent in the plots seeded to buckwheat and alfalfa. By the end of the second year couch grass had completely disappeared in the soy bean field, 10 per cent remained in the buckwheat and 5 per cent in the wheat field and 5 per cent in the alfalfa field. There still persisted 1 per cent of couch grass in the millet field at the end of the third year's continuous cropping. By this time the grass had gone up at the end of the fourth year. Corn and buckwheat had done a thorough job in their areas and soy bean took only two years to achieve the same purpose.

**OTTAWA REPORTS**

That the Soy Bean is Likely to Have a Considerable Effect on Canadian Agriculture.

Scientists dealing into the possibilities of the soy bean have not yet explored all its uses. Industry has only begun to make use of this remarkable plant. The mature seeds of the soy bean have a very high oil and protein content and the oil may be used wholly or in partial replacement of other oils in vegetable, shortening, margarine oil, paints, soap and linoleum. It is valuable as a concentrated protein feed for live stock. Where human nutrition is concerned, diet deficiency diseases, pellagra and rickets are unknown in those areas of the Far East where soy beans have been used in human diet. Two and one half pounds of soy bean flour has been found to contain the nutritive equivalent of 54 eggs or three quarts of milk and it has more of the essential mineral vitamins, enzymes and phosphates than are found in any other field crop.

In the contemplation of the multiplicity of uses, the immediate use should not be overlooked by farmers—the effectiveness of the soy bean in controlling couch grass. By continually cropping infested land with soy beans the weed can be completely smothered in record time.

Other crops are known to help control couch grass, but it has been proved that soy beans give by far the best results. An experiment recently concluded at the Central Experimental Farm in Ottawa disclosed some interesting facts. Four crops—soy beans, corn, buckwheat and alfalfa—were grown continuously for four years. In preparation for all these crops law ground was fall ploughed. Both soy beans and corn were cultivated five times and bred two during each growing season. Before seeding the buckwheat and millet the land was worked to keep down the growth of couch grass and give these another crop a good start.

At the end of the first year only 6 per cent of couch grass remained in the soy bean plot, there was 20 per cent left in the corn and 50 per cent in the plots seeded to buckwheat and alfalfa. By the end of the second year couch grass had completely disappeared in the soy bean field, 10 per cent remained in the buckwheat and 5 per cent in the wheat field and 5 per cent in the alfalfa field. There still persisted 1 per cent of couch grass in the millet field at the end of the third year's continuous cropping. By this time the grass had gone up at the end of the fourth year. Corn and buckwheat had done a thorough job in their areas and soy bean took only two years to achieve the same purpose.

**City Of Bizerte Exists No More**

Bizerte doesn't exist any more except by name. It is a junk heap. It was last May that Bizerte paid the final price for harboring Hitler's North African headquarters, but in the five months since the Allied Air Force finished surrounding it to stop the Nazi soldiers from fleeing through it, Bizerte has never come back.

Soldiers who have seen other campaigns and other razed cities say it never will.

Rebuilding looks impossible today.

What was once a city of thousands now it is a deserted expanse for soldiers. There are no women, no civilians, no business.

Empty buildings stare into the debris-littered streets, through eyes which are shrapnel holes. Houses are slanted down the middle, having the detailed interiors of bedrooms, sitting rooms, nurseries—for all the world like a child's cardboard doll house with the outer wall removed.

For blocks and blocks, not one single house can be seen. The same is true of business districts. Bizerte literally was bombed out of existence.

But now signs of life are provided by the Army. Bizerte is now a military reservation in front of a few houses which remain semi-intact and which are encircled by barbed wire.

The harbor, where once a thriving shipping business operated, before the Germans sought to use it for an escape corridor, still shows some life, but not much. Ringed by palm trees, many of whose tops have been sheared off by shrapnel,

**Checked and Rechecked for Quality**

Each "Eveready" Flashlight Battery must pass the same rigid tests for quality as in pre-war years. Remember, too, the date-line on the jacket is your guarantee of freshness.

When you need to re-load your flashlight, choose the batteries which have been preferred by Canadians for more than a quarter century—"Eveready" Batteries.

Canadian National Carbon Company Limited, Halifax Montreal TORONTO Winnipeg Vancouver

**"Ferdinand's" Weak Points Revealed**

Some details information about the new German self-propelled gun known as "Ferdinand" has just come out of Russia, says Newsweek. The gun itself is the familiar 88-mm cannon, but the tank-like vehicle is unusual. Its armor runs from about 8 inches in front to 3 in the rear. It carries a crew of six, including a radio operator, and is steered by periscopes. Two air-cooled 300-h.p. motors furnish the power to drive it about 12 miles an hour on a highway, less in rough country. It must stop to fire, its most effective range being about 1,500 yards. The Germans have found that this slowness, plus the poor visibility for the crew, makes it vulnerable to attack even by infantrymen using grenades or Molotov cocktails.

**New Nazi Plane Carries 130 Men**

The Madrid newspaper Informaciones published last week a series of photographs described as of the new German Messerschmitt 323 transport plane, said to be capable of carrying 130 fully equipped men.

The photographs showed a six-engine craft with multiple landing gear and doors in the nose similar to those of landing barges.

**Soviet Wounded Get Butter From U.S.**

During the first seven months of 1945 over 250 million pounds of edible fats and oils were shipped to Russia by the United States. Some 17 million lbs. of the butter, sent at the special rate of the War Relocation Authority, was for the wounded soldiers of the Red Army. It was shipped twice as quickly who had it instead of other fats.
