#### Daily Atlantic Passenger Planes

To London In Fifteen Hours

Daily passenger planes across the Atlantic will leave London at 4, 6, 8, 10 p.m. and midnight (plus at least three flights daily from the Continent). That was the postwar schedule predicted last week. ying time from London to the U.S. will be 15 hours. In all, some 300 persons a day will fly west-bound (with an equal number headed east) in luxury airliners capable of carrying up to 57 passengers, plus heavy loads of mail

This picture of the plane preempting the passenger traffic of the steamship shortly after the war was drawn by Edward Pearson Warner, former Assistant Secretary of the Navy, now vice chairman of the Civil Aeronautics

Said Warner: " . . . Just as statesmen and soldiers have learned in the past two years to run back and forth across the Atlantic when there is need of discussion, so in the future busines of London or Birmingham having negotiations afoot in New York or troit will board a plane where once they would have sent a cablegram." To all travelers Warner promised three things: (1) reasonable fares-about \$100 each way: (2) safety-a long-term average of one fatality per 100,000,000 pass-91-97 per cent. on schedule flights in winter, the almost perfect record of 99 per cent. in summer.

#### Menace Of Spruce Sawfly Is Reduced

Agriculture Minister Gardine said in the House of Commons recently that the spruce sawfly, which has damaged large eastern lumber stands, appeared to be under control, with the scourge gradually being reduced in differ

Some 800,000,000 parasites been distributed, and the use of this method of fighting the pes had proved successful. Now, the infestation was being reduced rather than spreading.

have been found of combatting attacks on hardwood tree: by the bronze birch borer, but his de-partment assisted in the salvaging of wood laft as a result of the insect's activities.

One Road Into Fortress Of Europe Lies Through Salonika and Balkans

In the presently popular game of guessing where the Allies will strike against fortress Europe the Balkans generally and Salonika in particular have not been ignored, tates the New York Herald Tribune. A large fleet of American Aberators, hitting at Salonika's irdrome, have just emphasized the strategic possibilities of the of guessing where the Allies will strike against fortress Europe the Balkans generally and Salonika in the strategic possibilities of the eastern Mediterranean, already brought into prominence by dipomatic and military activity in the

Long Sea Haul Salonika is a familiar port of

entry into the interior of German dominated Burope. It lies at the mouth of the Vardar Valley, the country of northern Jugoslavia and the Hungarian plains. A victorious advance along that line would feopardize the whole southern complex of Axis satellites—Hu gary, Croatia, Rumania and Bul garia and would also liberat Jugoslavia and Greece. It would menace Germany's access to Ru-manian oil and that important ar-tery of Axis traffic, the Danube. The uneasy political situation in the Balkans could be capitalized upon by the invaders, who would also have the aid of guerrilla armies already in being. Moreover the successful conquest of the Ralkans would open many possi bilities of direct attack upon Ger many in a region where such at tacks would have immediate percussions upon the fighting in

But the Balkans do not form a omfortable theater of operations The paucity of communications which would hamper Axis defenses, would also militate against rapid Allied advance. The terrain which enabled Serb and Greek guerrillas to keep the field long after their lands had been over run, offers many possibilities fo effective defensive operations b the enemy. And Salonika itself the best base for an advance into the Balkans, lies at the end of a long sea haul from Alexandria (800 miles or more), nearly half of which is flanked by islands now

in Axis hands. The Greek Islands The outer rim of these islands consists in the main of Crete, Sarmanto and Rhodes. It is hard to see how an expedition could reach Salonika unless this first line of its facilities for attacks by planes, light naval vessels and subma ines. To what extent the many islands of the Greek archipelago lying north of the first three, have also been prepared as bases for to the public. To put it mildly, however, it may be assumed that Hitler is ready to make naviga-

tion of the route to Salonika difficult and costly. But if the bases on Crete and the larger Dodecanese Islands are turned against their present possessors, the lesser nuisances might be neutralized In all, an attack upon Salonika is clearly hazardous and complex against the Axis or the military potential of Germany should so depleted in the great air battles over western Europe as to leave the southern fianl of her European position weakened and over impossibilities; both intensify the critical nature of these present

days of preparation and suspence Two-Way Pay-Off The distance between England and North Africa, says the Buffalo

THE WAR - WEEK - Commentary on Current Events

disclosed that several squadrons of Lancaster bombers have completed a round-trip flight from England to Africa, bombing the old Zeppelin works at Friedrichshafen on the way down and the big Italian port of La Spezia an the way back after refueling and replenishing the bomb racks.

Shuttle System
This new technique is important in that the bombers don't have to fight their way back hrough alert-ed enemy defences after attacking their target. They just keep going heading for pre-designated airfields at the ends of the England-North Africa run. In addition, the straight-line overland route allow them to attack targets at any point along the way without the nece sity of flying so many long miles back home. For example, if a target is 700 miles from England the round trip would be 1400 miles This way the bombers travel 1,250

This new British shuttle system brings out another valuable angle of the Allied conquest of North Africa. The Axis may have the shorter communication lines when it comes to invasion-but the Axi when it comes to aerial bombar

#### VOICE PRESS

VOICE OF THE PRESS HE WALKS HUMBLY

Mr. Churchill undoubtedly had more than one purpose in going again to North Africa. But one of his principal objects must have been to walk humbly in the presence of the fighting men who brought us victory there. His homely phrases to the troops at Carthage testify to the humility of a great soldier-statesman in the presence of successful troops. -Montreal Star

LONG DISTANCE CAMERA An aerial camera has recorded a picture of a landscape extending as far as 620 miles. And some per ple thought Jules Verne had a wild imagination!

#### A Great Victory For The Chinese

Japanese Fall To Captur Free China's "Rice Bowl

While our intentions have been focussed elsewhere, says The Winnipeg Free Press, our Chinese allies have fashioned themselves a victory which may be one of the most important yet in the war against Japan. Late in May the Japs launched a major offensive into Hunan province in an effort to capture one of free China's last remaining rice fields. This is the area west of Tunking Lake. If this offensive had succeeded. China might possibly have been driven out of the war. The crop in the Tunking Lake rice bowl this year is a bountiful one. When harmake up for the food deficiencies which result from poor crops i

The Japs timed their offensive so as to turn the 5,200 square miles of rice land into a battlefield and ruin the harvest. They had in mind too that it could be developed into a direct assault on Chungking itself. But the Chinese, showing a new offensive spirit and aided by the Chinese and American air forces, stopped the Japs cold offensive of their own. If they can hold the Japs back for another month, it will give the Chinese peasants a chance to harvest their rice and prevent starvation for perhaps millions this winter.

SADIE B. CHAMBERS

Lamb and the chops for brolling are the generally well known cuts of lamb but, to be economical, con-

Some Requests About

In cooking lamb the cardin principle is the same as all meat cookery, that is, "cook at a mod-erate temperature, at least most of the time." Any meat cooked at high temperature loses juice and flavour; it also shrinks and becomes dry.

For roasing tender cuts there are two important rules. The first,—use no lid on the pan; the second,-add no water. Covered roasters and added water go to make steam and when meat it cooked with steam the flavor is lost and also the meat juices.

The fat on lamb hardens a higher temperature than the fa serve lamb either piping hot or cold; not lukewarm.

Stuffed Breast of Lamb 3 lbs. breast of lamb 1 tablespoon minced onion 6 cup diced celery

2 cup butter 6 cups soft bread crumbs 1/2 teaspoon salt Dash of pepper % teaspoon sage 1/2 teaspoon nutmeg 1 egg slightly beater 2 cup mint jelly 14 cup vinegar 3 tablespoons flour

2 cups water

pepper. Fry the onion and celery in the butter until delicately browned. Add the bread crumbs and cook about one minute, mixing gently. Remove from the heat and add the salt, pepper season ings and egg, tossing with a fork until well mixed. Place stuffing on one side of each piece of lamb and fold the other side over the stuffing, making two or three rolls. Tie each roll separately and place in a baking pan. Bake in an unce ered dish in hot oven for 15 minutes. Add the boiling water, cove and bake in a moderate oven for 1% hours. Spread with mixture of jelly and vinegar. Bake uncover-ed for 15 minutes longer, basting frequently. Pour off the excess fat, leaving two tablespoons in the tight. This was done, largely by
