CHAPTER XIII SYNOPSIS

Dave Bruce, out of a job, arrives at Wilbur Ferris' Cross-Bar ranch. Curran, the foreman, promises him a job if he can break a horse called Black Dawn. When he succeeds, he discovers Curren expected the horse to kill him. A girl named Lois rides up angry with Dave for breaking "her" horse. She refuses to speak to Dave even when he uses his savings to pay off the mortgage en the small ranch she shares with her foster father, a man named Hooker. When Hooker is window, Lois has Dave arrested for murder. Encouraged by Cur ran, the local people have broken into the jail and dragged Dave to a tree where they are going to hang him. Among the crowd Dave

Disheveled, the clothes almost torn from the upper part of his body, Dave was thrust forward. "Here y'are, Miss Lois," shout ed Curran exultantly. "Here's the measly skunk who killed yore dad,

sees Lois.

would be driven from beneath him, and he would be left swinging—the most painful form of hanging, since it took a man perhaps a full half-minute before he became unconscious. But Lois drove her horse for ward. "Let him ride Black Dawn," she cried. "He broke him, didn't Curran burst into a roar of laughter. "That's sure smart of

Dawn's goin' to break him-by the

. . . Lois bent forward and whispered in the stallion's ear, then slipped to the ground. "Git him up, fel-lers," chortled Curran. "Bruce, yore race is run, and yo're goin' to do some real fancy high-steppin' tangos. Say, ain't yuh got no hal-ter on that hawss, Miss Lois?"

he continued. "He doesi't need a halter. He'll stand till I give the word to go. Curren roared with glee. "Thac'

"Yuh ain't got nothing to say?" sneered Curran.

Dave straightened himself and looked straight into the girl's face. He didn't want to die, but he had faced death too many times to flinch from it now that his time seemed to have come. But through his mind old Hooker's words were running: "You promised me you'll look

out for Lois if anything happens to me." Those words, cut off by the roar of the explosion from the assassin's revolver. And, "She never had a chance, poor kid." Somehow it seemed to Dave that he could go more easily if Lois believed he was not old

The girl was looking straight back at him. In the darkness Dave could see the dark gray pools of her eyes, as if lit by an inner flung it over the bough. Rough

hands laid hold of Dave and fastened the other end about his knot. Dave had ceased to struggle. He would go to his death at least "Git one of them broncs!"

and ye're goin' to have the honor | sure some hawss," he shouted git to movin', fellers, because he'll move fast and quick. Fork this hombre acrost him!"

A little cautiously, for the reputation of the black stallion was Dave dragged him to Black Dawn's side and raised him, forcing one leg across and thrusting the toe of the boot into the stirrup. Bu Black Dawn stood like a graven image, utterly motionless, save for a trembling of his flanks. Dave wondered, incongruously enough, why they hadn't bound

usement that his hanging offers. Dave sat the black stallion disfainfully, making no attempt at resistance. But again he sought Lois' eyes, and again he saw the girl's eyes fixed on his. And all of a sudden it seemed to him as if a triple understanding had been girl and the big horse. He felt that Black Dawn recognized his mas-

HOW SECRET "ROCKET" PLANE WORKS

The photo and diagram shown here are of an Italian Caproni-Campini jet-propelled plane that presumably operates on the same principle as the new, secret jet-propelled, propelleriess plane whose perfection by British and U.S. engineers has just been announced. This Italian plane flew 168 miles in 2½ hours on December 1, 1941. The first successful flight of the British plane was made in May, 1941. The "rocket" or jet-propulsion method is basically simple. Air is drawn into the fuselage through large intake vent under the nose and compressed in a rotary blower. Fuel is added in the combustion chamber and the gases then pass through a turbine and are ejected at high velocity through a tail nozzle. The rearward force of this jet of gas thrusts the plane forward.

The photo and diagram shown here are of an Italian Caproni-Campini

the statement said.

Lesearch work on the jet-propulsion engines was begun in 1938 in Great Britain by Group Capt. Frank Whittle of the R.A.F. and his preliminary engine ran successfully in April, 1937. Better Use of Gun Eepected

The statement disclosed that the British Air Ministry placed its first order for a plans using jet-propulsion engines with the ester Aircraft Company, Ltd. in 1939.

"The first successful flight of this aircraft was in May, 1941,"

said the statement.
In addition to speed at high altitude, where the standard-type plane's propeller must whirl faster to maintain speed in the thin air, the jet-propulsion engines are expected to eliminate the need for synchronization of guns and propellers. This will permit better use of the

The Jet Principle The new United Nations jetpropelled fighter was not reached at a single bound, writes W.K. in the New York Times. Exhaust gases have been used by the British, Germans, Italians and American to kick a heavily loaded airplane forward and thus help the engine get it off the ground. Even before this, it has been found by the Frenchman, Rene Lorin, that when air is admitted into a radiator duct at high speed, slowed down (with a consequent increase in pressure), heated, and then expanded through a nozzle, it can exert a owerful forward thrust. The principle is more easily applied to liquid-cooled than to air-cooled engines. All this amounts to

letting the radiator help the engine push the plane. In Thin Air Jet propulsion is necessary if we are to exceed the possibili of propellers. A propeller literally screws its way through the vacuum. The greater the sity of the air, the greater is the efficiency of the propeller. As we rise, the air becomes thinner.

Finally a point is reached at which no propeller will "bite."
The ceiling has been reached. With the jet propulsion exactly the opposite holds good. The less air there is the more efficient is the motor. If the ejected gas has an expansion efficiency of 4,000 feet a second at rest, the same force exerted in mo would increase the speed up to a point where the maximum efficiency is reached at something like 10,000 miles an hour. Jet pr

sion gets better and better speed and height increase. As a mater of fact, with a fuel composed of liquid oxygen and gasoline, jet velocities of 12,000 feet a second have been obtained. The problem is how to handle the heat and how to control the plane in flight. Dubbed "The Squirt"

Whether or not jet-driven

planes will play a major role in

this war remains to b seen. Some observers claim they have watched this plane, streaking about the skies over Britain flash ahead of the famous Spitfire fighter.

But although it is said that the jet plane soon will be in full the jet plane soon will be in full production, it is recognized it may be some time before it could become a decisive war weapon.

When one of the new British American jet-propelled planes first flew over the outer London area in an experimental flight, many persons rushed for shelter, think-
