### B.C. RESEARCHERS BEATING MASTITIS

Vancouver (CP) - British Columbia Research Council announced that losses of \$500,000 annually by the province's dairy farmers will soon be only a memory.

Surveys are now being made to determine the prevalence of mastitis and to ascertain best means of detecting the ailment in early stages.

### Federation Facts

By Charlie Watson

(intended for last issue)

Haldimand County Federation of Agriculture, Annual Meeting will be held on Tuesday, December 10th, at 2:00 P.M. in the Auditorium of the Rural Youth and Agricultural Centre, Kitchener.

Johnny Plays Again

Johnny is able to take a brighter view on life now. He has had an operation on his crippled leg and now he does not limp at all.

The United Farmers Co-operative Company is giving thirty grants for each of these courses of \$7.00.

"FLOWERS FOR EVERY OCCASION"

PAST PROSPERITY - The Pictou Board of Trade and Chamber of Commerce has been successful in raising a fund of \$10,000 to help the unemployed.

STARY BENEFITS (some others are doubtful) reaped from the shipbuilding boom, reminds us of the small minority of veterans who lost nothing of their gratuity without any thought of looking for work.

Pictou (N.S.) Advocate

"I thought I was WELL-INSULATED"

"Till polythene came along!"

Well may the thick-skinned rhinoceros grieve, for chemistry has produced an insulating material that puts even his tough hide to shame... It is called polythene—a new plastic that stands up to heat and cold and is unaffected by any known chemicals at ordinary temperature. Its unusual insulating qualities make it an indispensable factor in the vast new field of radar and television while it gets back to earth again in the form of simple, resilient, waterproof refrigerator bowl covers that seem to last forever... polythene, in its scope of application, is another outstanding example of what Chemistry is contributing to our daily comfort and welfare.

Practical farmers weight their tractors by simply adding water to the tires. In summer this procedure is fine, but in cold weather the addition of some antifriction to the water load is necessary. Here chemistry steps in. Calcium Magnesium Chloride obtained from C-I-L salt; Neoprene, Manatex, is the low cost chemical ideal for this purpose. It has no detrimental effect on the tires.

Further information on any of these products is obtainable by writing to: C-I-L, P.O. Box 25, Montreal, Que., Canada.

SEVERING CANADIANS C-I-L LIMITED THROUGH CHEMISTRY

Looking Ahead

with tougher tires... stitchless watch straps... anti-frax tractor tires

Carbon Black (a nuisance when it collects on the lamp chimney) makes today's tires much tougher and abrasion resistant. 25 years ago tires ran 5,000 miles, with luck. Today's tires, thanks largely to the addition of carbon black, run at least 5 times farther. A versatile material, carbon black finds its way into such diverse products as ink and buttons, fountain pens and, yes, carbon paper.

A strap without stitches will grace the wrist watch of the future. It is molded from the versatile plastic, nylon, which makes it unaffected by weather, perspiration or continuous wear. Tested by servicemen under all climatic conditions, it is now about ready for peacetime use.
