

THE UNITED STATES It is nothing new to have Russian

papers proclaiming that the United States is a nation of "war-mongers." But when, right in the Nation's hished a strong attack against "Warmongering" it caused many Americans to stop and think seriously for

"It would be hard to convince a foreigner reading the latest wave of publicity exploits by the air force that the United States is not hell-bent for war," says The Post. "First came the round-the-world flight of the B-50 and attendant interpretations of this country's ability to bomb any spot in the world. Then the story that the B-36 had flown miles non-stop, carrying a bomb load 5.000 miles. Then the air force "finding" that Russia has no adequate defense against the B-36. Finally, there comes what appears that some 70 strategic targets in Russia have been earmarked as possib e bombing objectives; and that the air force has assured the Joint Chiefs of Staff that each of these cities could be attacked from bases

on this continent." The Post goes on to say that military strategists would not be doing their duty if they did not have plans made for hitting back at Russia-or any other potential enemy-in case of war. But, "by the same token, such plans ought to be a highly guarded secret, and to allow a description of them to be leaked into print is an utterly inexcusable piece of provocation. Even the blustering

'Oh, no," said Jake. "I got the since she's from Havana, Cuba. | circus money saved up already.

THE FARM FRONT

newspapers have been "rapping" the use of DDT for spraying in dairy barns—some of them even going so far as to say that the DDT is responsible for the "virus "X" disease of man and the "X" disease of animals."

Now-following a meeting of the principal government agencies con-cerned with the use of insecticides—the United States Department of Agriculture has come out with an official statement. It says, "There is no evidence that the use of DDT in accordance with the recommen-dations of the various federal agencies has ever caused human sickness due to the DDT itself."

"However," the statement goes on, "minor toxic symptoms may be produced by coal-oil and various solvents used in DDT and in practically all other insecticide mix-

"Totally without foundation" is the way the statement deals with the published reports that DDT is responsible for the diseases mentioned in my first paragraph. Both these diseases had been reported and recognized before DDT was ever used.

Our own Ottawa Department of on the subject. To protect farmers from buying insecticides that are either worthless or highly dangerous, all such preparations sold in Canada come under the provisions of the Pest Control Products Act. No pesticide is allowed on the market until it has been analyzed and approved by technical officials of the Department. And if such preparations are used IN ACCORDANCE WITH THE INSTRUCTIONS ON THE LABEL they TIONS ON THE LABEL, they will be effective for the purpor-for which they are recommended and will have no detrimental effects. (The capitals are mine, as I be-lieve that most of the trouble with DDT has been because people DIDN'T follow the directions

Agriculture say that spraying dairy barns with DDT—particularly with oil solutions—should be done when cattle are NOT in the stalls; and that special care should be taken to make sure that milk and cream cans and milking machines are

themselves with DDT, when wet-table powders are used in water. The water spray won't penetrate the skin, and the residue is not absorbed by the tissues.

BUT EVEN WITH WATER SPRAY THE UTMOST CARE SHOULD BE TAKEN TO SEE DO NOT COME IN DIRECT CONTACT WITH THE SPRAY.

There are still some farmers who believe that chemical fertilizers are ruining our soils; but if you are one of them, I have to tell you that the facts seem to be against your belief. No experiments have ever shown that chemical fertilizers are in any way detrimental to soil.

Over in England there's been a test going for almost a century

—95 years to be exact—using manure on one patch of wheat, and
chemical fertilizers on a similar
patch. The plot receiving 1,392
pounds of complete fertilizer each
year out-yielded the plot treated with an annual application of 15.7 tons of manure. During the past five years the yield was 4.4 bushels per acre greater. So it would seen poisoned or harmed after receiving chemical fertilizer annually for years-which is quite a stretch of

time. From what I hear more and more Ontario are getting interested in sunflower growing — although just how many of them are going so far as to put in a real crop I really cannot say at the moment.

But from Buenos Aires come word that is rather interesting.
This report says that, compared
with 1948, the area sown to sunflower this year has increased by

properly).

* * * Department of

almost four and a half million acres This is because Argentine farmers have found that their sunower crop is much more profitable than corn. Besides that, maturing wheat crops that were killed by heavy frosts

sunflower seeds—or at least the insides of them—are better eating than peanuts. I have a friend than peanuts. I have a friend—he came from Russia years ago—who always has a handful or so in his pocket. Puts one edgewise between his teeth—uracks open the bull, sucks out the "innards," and reaches for another. Try it sometime.

Where Chinese Reds Shelled British Sloop—The cross in the Yangtze River marks the spot where HMS Amethyst, a British sloop, was driven aground by Chinese Communist shelling. The location is Rose Island, 80 miles east of Nanking (1). Help, in the form of warships, is racing to the scene from Shanghai (2). Communists hold the north bank of the river (shade area), with the Nationalists in control of the south bank.
