Answer Elsewhere On This Page

Bells Tolled For Young And Old-Cupid recently un-notched two arrows in an apparen tempt to prove that age shields no heart from his missiles of love. The roguish archer chalked up one direct hit on two Londoners, 78-year-old Mrs. Mary Marshall and Richard White, age 70. Only a few days after the bride, a widow with 11 grandchildren and seven great-grandchildren, walked down the aisle of London's Church of the Sacred Heart-with her hubby, 12-year-old Virginia Pennell announced her marriage to 19-year-old Donald Gray. Mrs. Gray was a sixth grade student before Cupid took aim.

## CHRONICLES GINGER FARM

There is an early morning proession at Ginger Farm that is a bit late coming in for break fast I naturally watch for him from the kitchen door or window, And this is what I often see and hear. First, although they are still out of sight. I hear the dogs barking. This indicates Partner has left the barn. Then through the little gate

very comfortable as things are, He had better find out how comfortable he would be if he which separates the barnyard from could not see you at all, Then the garden I see Black Joe coming racing along, tail in the air, sleek coat shining in the sun. Once really necessary to his complete happiness-or whether he can through the gate he stops and waits. The reason is obvious as get along very well alone. No matter what he decides, I almost immediately Tippy and Honey come along, barking and think you would be more comjumping around each other with fortable, too, relieved of this unearly morning exuberance. Then certainty, wouldn't you? there is a clanging of pails . . Partner is making his way through the little gate while the dogs get in his way as he walks, a fact to which neither he nor the dogs pay

much attention.

Joe still waits at the gate,

on the run, a black streak leaping

reach the woodshed door. Now the

dogs stop their fun in anticipation of being let into the house. The

outside door opens—followed by absolute pandemonium in the wood-

shed. Then the kitchen door opens

-and in come dogs, cat, Partner

feed dish, and Partner at the sink

getting washed up for breakfast.

For awhile there is peace and quiet-ness. We have breakfast, talk and

listen to the news—and generally the news is the sounding gong for

our breakfast conversation. And so it goes. We have more or less made of our breakfast hour a time

of leisure. The early morning chores

are over . the work of the day not

yet begun . . . so we take this time for ourselves knowing there

are not likely to be any interrup-

tell. There might be a sick cow.

or a new calf, or a mineral-selling

in-to say nothing of telephone

agent, or maybe a neighbour drops

Perhaps this story of our break-

fast hour sounds as if Partner and

I live a very leisurely life, Actually

we don't-but we do try to live an

"unhurried" life. As you know there

is such a thing as making haste

These days the emphasis is of

Under such conditions it is impos-

sible to make haste slowly. You

can't cram 12 hours work into an 8-hour day without hurrying-or without suffering physical and men-

tal reactions. There is far too much

hurry; too much anxiety to ge

for a good time. And since that

good time often results in late hours

and over-taxed nerves those who thus indulge get insufficient rest to

SIMPLICITY

There is a simplicity about the

resting world of winter that is nei-ther stark nor colorless, once the

eye has accustomed itself to the

season. It is elemental and direct,

and thus has its own clean beauty,

self, by the long shadows and the

temperate highlights. But it is so different from the full color of

greens of spring that it is our habit to dismiss it as a time of dull greys

What it comes down to is ele-

so obviously a tree, skeletonized

to its very branch and twig. You

can see every inch of it, every ridge of its bark and every bud-knob.

Yet there it stands, firmly rooted

strong in its upthrusting trunk,

purposefully branched to withstand

the storm and at the same time to

spread its leaves to the sun in a

themselves. There they stand, their

skeleton of rock substantial against

the weather. The mark of cen-turies is upon them, the gouge of

ice and the knifing of swift water;

clean ridges that direct the winds and breast the storms. And the

streams which flow at their feet are

brooks and rivers, the flow of win-

ter waters, unshaded, unshoaled except by the ice of winter itself,

their sole purpose to drain the land before the floods of spring.

Even the snow on such a land-

scape has this same simplicity, carved and shaped though it is by

the wind. Is there anything more beautiful, in the purely esthetic

sense, than a snowdrift curled in the shape of the storm's breath?

In its cold, clean way it seems to sum up the direct, unembellished

but they rise above the valleys in

autumn and from the burged

and lusterless browns.

proper season.

· Always running short of yeast because it spoils so quickly? End this nuisance - switch to modern Fleischmann's Fast DRY Yeast! Keeps full strength and fast-acting right in your cupboard - no efrigeration! No new recipes one package equals one cake perishable yeast in any recipe.

### Plan To Drain The Mediterranean Sea

German experts have made a film based on a plan for uniting the land masses of Europe and Africa by controlling the water level of the

The plan was first developed by German architect Soergel before the war, and it was one of Hitler's boasts that if he defeated the Allies he would change the face of the earth by using it. At the film's first showing

Munich recently Soergel said the project would create a new continent. The artificial lowering of the Mediteranean would enable some half a million square miles of fertile land to be reclaimed from the sea.

To bring this about Soergel would aits of Gibraltar and keep out the Atlantic Ocean, which sweeps in at the rate of 100,000 cubic yards of

er every second. He is said to have proved mathe matically that once the water supply from the Alantic is cut off the Mediterranean will disappear at the rate of about 5 feet 2 inches a year by evaporation.

His Atlantic Dam would arch

out into the ocean across the Straits of Gibraltar. It would be 500 yards thick at its base on the sea-bed, and taper gradually to 50 yards at the top to withstand i tremendous pressure of water. No flood-gates would be provided, Obsolete Ports

The advantages might be great, since the draining of the Mediter ranean Sea, as it is now, would provide a vast new land area in an over-crowded Europe. Seaports would become obsolete all round the present Mediterranean

coast, but the new land would com pensate for these losses. Soergel points out that it would not be possible to drain completely the entire Mediterranean basin, To do this another dam across the Dardanelles would be needed, and four big rivers which empty into the Mediterranean - the Ebro, Rhine, Po, and the Nile-would

have to be diverted. If this project ever materialized scientists say it would result in a change of climate favourable to Northern Europe and especially to Stream would be rendered much more effective.

At present this warming current, which flows across the Atlantic to water which flows deep through the Straits of Gibraltar into the

Experiments have shown that despite the considerable inward flow of Atlantic water into the Mediterranean there is at the bottom a counter current of extremely cold water, which not only cools the Gulf Stream but diverts its course and prevents it reaching the continent of Europe directly.

### Trains On Sausages

The council in Tipton, England, Holden, who, last August, won the European Marathon at Brussels.

When Jack lost his shoes during that while the acreage in crops, and the number of livestock on farms has scarcely changed, three months quarter of a century's running, sus tained him.

Sausages made by a firm for whom he is head groundsman are usually part of his training diet. He also thrives on hipbone steak and raw eggs, and was seen to finish a marathon of twenty-six miles showing not the least sign of distress. Holden is 5 ft. 5 in. tall and weighs about 140 pounds. He was a foundry worker at thirteen and has since won events over every distance from one mile to thirty miles. Many think him superior in many ways to the great |

# Bright Plaids Invade Bedrooms

DLAID, which may be found everywhere these days from a child's hair-bow to a man's dinner jacket, has invaded the boudoir with a bang.

Bright, bold colors and forceful patterns give a new look to rooms that once bespoke a rather timid femininity in pale pinks and blues.

If your daughter's a teen-ager, chances are she's mad about plaid, and would happily repeat the tartan of her favorite skirt all over her room. This being the case, let gaiety prevail and go all-out with matching coverlet, petticoat and pillow sham for her

effect is as lively as a football rally. Perhaps you, too, feel your bedroom could use a bit of vibrant pattern. Your husband in particular should be pleased with a change. Few men find lacy ruffles to their

bed. And repeat the pattern in ruffled draperies. The

An eye-catching effect is achieved when you adorn your bed with a plaid petticoat, a harmonizing coverlet in a solid color, and a plaid bolster. Leave your draperies plain to tone in with this more subtle combination.

two generations.

Examined with the electron mi-

croscope, the ten samples of milk from young mothers whose sisters, mothers or grandmothers had breast cancer contained spherical

particles similar to those found in

cancer - susceptible mouse mothers. Of the thirty-two control milk

samples from women who had seemingly clear family histories,

spherical particles. In the remain-

ing twenty-one samples only oc-casional, isolated single particles were found in seventeen. The other

four samples appeared free from
