

### Tapping The Sun For Energy

Some people have been agitating at the sun with a new interest since reading the prediction of President Comant of Harvard that by the end of the century the sun will be the main source of energy for industry, atomic energy having been found too costly and too dangerous for general use. Out in Ohio, Charles F. Kettering, the inventor, is working on the problem of tapping solar energy. When he has found out what makes the grass green he thinks he will have solved the problem. Mr. Kettering is the inventor of the self-starter for automobiles. In his retirement he is trying to discover a kind of self-starter for his industry.

Whenever the question of solar energy is raised it is immediately pointed out that we are already existing on energy, which the sun laid down eons ago, in the form of coal and oil. Ever since water power is a creation of the sun, since the sun has first to dry the moisture up above sea level before it can be released as rain to fill the rivers behind the great dams. Earthquakes and volcanoes represent enormous amounts of energy which are the creation of the earth and not of the sun, and this kind of energy we could well do without. The sun is also the source of such human energy as is displayed on the earth, for it produces the food by which men exist. The dwellers in Plato's cave had no idea what life was like until they left their cave and came out into the sunlight.

Father of those who are still seeking the secrets of the sun was Anaxagoras, who ventured to tell the Athenians that sun was not a god driving a chariot and four across the sky but a mass of molten metal somewhat larger than the Peloponnese. It took all the eloquence of Pericles to save his friend from severe punishment for this and similar un-Athenian views on the nature of the universe. Anaxagoras went into exile, while the Athenians continued to argue about Helios, the sun god, transferred to his golden chariot and immortal from front seat to east every night. The people of Rhodes went on to build the Colossus in honour of this god and centuries later Roman Emperors were still trying to force the cult of "Sol Invictus" upon their disillusioned subjects.

Twenty-four centuries after Anaxagoras astrophysicists know a great deal about the sun. By intricate calculations they have discovered the secret of the sun's energy in the transmutation of hydrogen gas into helium. Last week it was confirmed that scientists had so far progressed in their experiments that for another half billion dollars they can probably apply the sun's secret to the making of a hydrogen bomb. While they are at work the sun will be exploding several million hydrogen bombs a minute, creating enough new energy every day to balance what is given off in light and heat. How to utilize this free and unlimited energy is the problem of scientists who, like President Comant, look forward to another, if not golden, then silver age when deserts will bloom, food will be plentiful and all nations will enjoy an adequate place in the sun.

### Telling The Time By Your Cat

Can cats really see in the dark? Why are a cat's pupils slit-like when she blinks at the sun but widely dilated when she has just come out of a darkened cellar? Questions like these are now being studied by scientists and already they have made some interesting discoveries.

Only the other day Mr. Ralph Gunter, a London scientist, set about finding out whether a cat can see objects in a room which no human eye appears pitch-dark. He used six cats against whose eyes he decided to match his own sharp night.

He put into a dark room a saucer of milk which was "illuminated" with a beam of light so faint that he himself could not see it. Every one of the six cats saw the saucer of milk. And as it was in an air-tight, glass-sided box, the cats could not possibly have scented the milk. These and other experiments are continuing. Scientists will probably establish that what we call a dark room is full of tiny rays of light which a keen-eyed cat can pick up easily. It is known that the pupils of a cat's eyes are capable of being dilated or contracted to a great extent, thus letting in every particle of light. And this enlargement of their pupils takes place almost instantaneously.

Ever tried to tell the time by a cat's eyes? It's quite possible if the weather is favourable. On a right day, according to Chinese astrologers who have studied the subject, a cat's eyes are smallest at noon, gradually widening until it is dark and remaining like that until light dawns again, when they begin to narrow once more.

No Sale—This Communist propaganda sign has no effect on Pvt. Harold Harrison, left, of Spring Hill Nova Scotia, and Pvt. Raymond McConnell, Bren gunners with the Canadian forces in Korea.

### TABLE TALKS

by Jane Andrews

#### PORK PIES

Thicken 1 can of consomme with 3 tbs. flour blended to a smooth paste with 1/2 cup cold milk. Add 2 cups diced cooked pork, 1 finely chopped small onion, 1 very finely chopped clove of garlic. Season with salt and pepper. Keep hot in double boiler.

#### Biscuit Shells

Mix and sift into bowl, 2 cups once-sifted pastry flour (or 1 1/2 cups once-sifted hard-wheat flour), 2 tsp. Baking Powder, 1 tsp. salt. Cut in finely 5 tbs. shortening. Make a well in centre, pour in 25 cup milk and mix lightly with a fork. Roll out dough to 1/4" thickness. Cut into 4" squares. Line greased muffin pans with dough, prick with a fork and pinch corners. Bake in hot oven, 425 degrees, 15-18 minutes. Fill with pork mixture and serve. Yield—6 servings.

#### LAMB DUMPLINGS

Cut 2 lbs. lamb into 1" pieces, brown well in hot dripping, pour off excess fat. Add 4 cups boiling water, 2 celery tops, 2 sprigs parsley, 1 bay leaf, 1 tsp. salt and 1/2 tsp. pepper. Cover and simmer 2 hours. Add 1 1/2 cups sliced carrots, 6 peeled small onions. Simmer until meat and vegetables are tender, about 3/4 hour. Combine 1 tbs. melted butter and 2 tbs. flour and stir in a little hot gravy; stir into stew; stir and cook until thickened.

#### Dumplings

Mix and sift into bowl, 1 1/2 cups once-sifted pastry flour (or 1 1/2 cups once-sifted hard-wheat flour), 3 tsp. Baking Powder, 1 tsp. salt. Cut in finely 1 1/2 tbs. shortening. Make a well in centre, pour in 3/4 cup cold water or milk and mix lightly with a fork. Drop by small spoonfuls over hot stew. Simmer, without lifting the cover, for 15 minutes.

#### PORKPIES

Thicken 1 can of consomme with 3 tbs. flour blended to a smooth paste with 1/2 cup cold milk. Add 2 cups diced cooked pork, 1 finely chopped small onion, 1 very finely chopped clove of garlic. Season with salt and pepper. Keep hot in double boiler.

#### BISCUIT SHELLS

Mix and sift into bowl, 2 cups once-sifted pastry flour (or 1 1/2 cups once-sifted hard-wheat flour), 2 tsp. Baking Powder, 1 tsp. salt. Cut in finely 5 tbs. shortening. Make a well in centre, pour in 25 cup milk and mix lightly with a fork. Roll out dough to 1/4" thickness. Cut into 4" squares. Line greased muffin pans with dough, prick with a fork and pinch corners. Bake in hot oven, 425 degrees, 15-18 minutes. Fill with pork mixture and serve. Yield—6 servings.

#### SELF-ICED SPICE CAKE

Mix and sift 3 times, 2 1/2 cups once-sifted pastry flour (or 2 cups once-sifted hard-wheat flour), 2 1/2 tsp. Baking Powder, 1/2 tsp. salt, 1 1/2 cups ground cinnamon, 3/4 tsp. each of ground cloves, ginger, allspice, nutmeg and mace; mix in 1/2 cup washed and dried seedless raisins and 3/4 cup chopped walnuts. Cream 3/4 cup butter or margarine and blend in 1 1/2 cups lightly-packed brown sugar; beat in 2 well-beaten egg yolks and 1/2 tsp. vanilla. Add dry ingredients to creamed mixture alternately with 3/4 cup milk and spread batter in 9" square pan, which has been greased and the bottom lined with greased paper. Beat stiff, not dry, 3 egg whites and a few grains salt; gradually beat in 1 cup lightly-packed brown sugar and spread over cake; sprinkle with 1/2 cup chopped walnuts and bake in a rather slow oven, 325 degrees, 1 1/2 to 2 hours. Cover lightly with brown paper for last half hour.

### Public Offering Of Machine Works Shares

A new issue of \$25,000 common shares without nominal or par value Canadian Javelin Foundries and Machine Works Limited are being offered for public subscription, announced Ernest Financial Corporation Limited today. The shares, priced at \$2.50 will finance the company's expansion programme, prospects for which are very bright. The company is in excellent view of the present lack of foundry capacity in both the United States and Canada.

The company manufactures the "Warm Morning" space heater which has been widely marketed across Canada for a number of years. Extensive use of this product is made by both major Canadian railroads. The company also manufactures polished cast iron hollowware on a mass production basis using methods successfully developed and tested in the American market. Distribution is made through a large number of outlets across Canada including chain stores and mail order houses.

Due to many articles of hollowware being in short supply in Canada and the United States, the Canadian Javelin Foundries and Machine Works Limited is aiming at a greatly increased production of this commodity in Canada. In the past, imported iron—the basic raw material—and imported the finished products. The company intends to locate the American market for its finished products. If successful, this will be the first time that large scale shipments of hollowware have been exported from Canada.

The company's export position is strengthened by the reduction of the duty on open cast iron vessels exported to the United States, to five per cent. This reduction was a result of the Tariff agreement.

Miscellaneous industrial castings are also manufactured from both iron and aluminum as well as cast in steel for commercial sale and their own use. The company is engaged in preliminary work on the production of defence items whose ultimate consignee is the American armed forces.

#### Profits and Service

If business were as heartless and as shortsighted as some of its detractors would have us believe, then prices and profits are not based on costs but solely on the policy of "all that trades are profits." If that were true tremendous new fortunes would have been amassed in the last few years and the cost of living index would have galloped much faster than it has.

During most of the period since the war, demand has been far in advance of supply. True, there have been some recent and important exceptions, though generally a finding of markets has been the least of our worries. But, as official reports abundantly confirm, profits have been far from exorbitant and the crop of millionaires smaller, not larger.

Profits, while important and vital to a business, is to continue and expand, are only one of several factors that go to make up a successful company. Another and most important one is service to customers.

Right now in this country there are dozens of concerns that could export every pound of production to the United States and at higher prices than they are getting from Canadian buyers. And they could have been doing this for a considerable time. But that would mean standing buyers throughout the years and who will continue to come. Permanent and successful business is not built on that short-sighted basis.—The Financial Post.

### Public Offering Of Machine Works Shares

A new issue of \$25,000 common shares without nominal or par value Canadian Javelin Foundries and Machine Works Limited are being offered for public subscription, announced Ernest Financial Corporation Limited today. The shares, priced at \$2.50 will finance the company's expansion programme, prospects for which are very bright. The company is in excellent view of the present lack of foundry capacity in both the United States and Canada.

The company manufactures the "Warm Morning" space heater which has been widely marketed across Canada for a number of years. Extensive use of this product is made by both major Canadian railroads. The company also manufactures polished cast iron hollowware on a mass production basis using methods successfully developed and tested in the American market. Distribution is made through a large number of outlets across Canada including chain stores and mail order houses.

Due to many articles of hollowware being in short supply in Canada and the United States, the Canadian Javelin Foundries and Machine Works Limited is aiming at a greatly increased production of this commodity in Canada. In the past, imported iron—the basic raw material—and imported the finished products. The company intends to locate the American market for its finished products. If successful, this will be the first time that large scale shipments of hollowware have been exported from Canada.

The company's export position is strengthened by the reduction of the duty on open cast iron vessels exported to the United States, to five per cent. This reduction was a result of the Tariff agreement.

Miscellaneous industrial castings are also manufactured from both iron and aluminum as well as cast in steel for commercial sale and their own use. The company is engaged in preliminary work on the production of defence items whose ultimate consignee is the American armed forces.

#### Profits and Service

If business were as heartless and as shortsighted as some of its detractors would
