and serve immediately.

With the new maple syrup crop just about due—I hope, I hope, I hope—a few hints about the other half of one of the world's most delicious combinations might not be amiss. I refer to pancakes of course—as if you hadn't guessed!

Check your procedure on the following points - they're all highly important. · Measure ingredients carefully

If you use a prepared mix, measure it into the mixing bowl but · Add liquid and stir only until the flour is moistened. Small

eral spears of cooked asparagus across the center of each baked pancake and roll. Pour hot cheese sauce over the pancake rolls. Garnish with a strip of pimento lumps in the batter will come out in the baking. · Grease the griddle only lightly. If the griddle is properly seasoned, pancakes will not stick. · Test griddle for correct tem-

perature. When a drop of water evaporating, the griddle is just hot enough.

• For even cooking and uniform-sized cakes, pour the pan-cake batter from a measuring cup rather than spooning it onto

cake, use 1/4 cup of medium-thick Bake on one side until bubbles begin to break and edges become dry. Turn only once. · Serve while hot. Covering the green pepper into one recipe of

Your Child's Health And Care By STELLA McKAY

Since epidemics of influenza re breaking out all over Onario, mothers are naturally anxous about their children. How can I protect my family from it?
What can I do if we do get it? Is it a serious type of 'flu? are some of the questions we've been asked. The name 'flu is often loosely

The name 'flu is often loosely used by anyone who has a bad head cold along with fever, cough and bodily aches and pains. However, the onset of true 'flu is much more sudden and much more violent in its actions. The child's temperature shoots to 103 or more degrees F., and every bone in his body seems to ache and exhaustion follows the least effort. A dry persistent cough usually appears early in the illness and the child complains of extreme soreness in his chest from coughing so much.

Fortunately, today's 'flu epi-

Fortunately, today's 'flu epidemics seem to be of a mild type, but even so, great care should be taken to prevent secondary invaders, such as pneumonia and ear infections. Luckily for us, the wonder drugs, sulpha, penicillin, aureomycin and other antibiotics, which were so tragically lacking in the severe tragically lacking in the severe 'flu epidemics in 1918-19, usually prevent any serious develop-

If your child complains of feeling chilly and says his bones are sore and his head aches, put him to bed, keep him warm, take his temperature and call your doc-

During the fever stage, espemoon. Since the Nineteen Forcially, if tiredness is severe, do not allow your child out of bed, ties so many requests have been received for "moon leases" that and treatment. It is usually safe to give aspirin to help reduce the fever and to relieve the aches the gist of which is that its no authority to receive applica-tions for land on the moon beand pains. Half an aspirin tab-let, may be given, every 4 hours but not oftener, to a child from 2 to 5 years. Older children may ticle by E. John Long in The New York Sunday Times. have a whole aspirin tablet, every 4 hours. A tiny bit of aking soda in a glass of water, given along with the aspirin, will keep the child's stomach from be-ing upset. Aspirin for small A psychologist at Cornell U versity announced that he has trained five earthworms to go children should be crushed to a powder and mixed with sieved through a T-shaped maze. fruit or dissolved in water and sugar. Your doctor will tell you about diet. Offer your child food

> However, he should be offered fruit drinks, ginger ale and water freqently as it is important for him to get plenty of fluids. If your wee patient's pyjamas and bed linen become damp from perspiration, they should be changed. Sponging a child with lukewarm water will help bring down his fever and make him more comfortable. Wash small areas at a time and keep the rest

ile playing indoors. Wet or

tion to get a head start. 5. Avoid having your home overheated but no child should endure a graft from wide-open windows. Likewise open windows in a sleeping room during winter weather are unnecessary and may be danger-ous. To allow your child's bed-room to drop below 60 requires bed clothing that is too heavy. This tires a child and causes rest-

less sleep. 6. Have air in the home moist, if possible. If the air in your home is dry, the nasal passages and bronchial tubes are obliged to give up large amounts of mu-branes lining the nose moist. Dry membranes cannot function prop-

7. If you haven't an humidifying system connected to your furnace, you should try other methods of evaporation. House plants and pans of water in the rooms will help increase the humidity. Let your kettle boil for about five minutes, morning and evening, each day. However, it you can gradually accustom your family to having your home about 68 degrees in the daytime and around 65 at night, you won't need to worry about the humi

It is always well to remember that your child's emotions can and do effect his susceptibility to infections. A happy child is usually a healthy child. The love and security you give him are also powerful weapons against 'flu and other diseases. NEXT WEEK: "Chat With New Mothers" and "Johnny Won't Play With Other Children." Readers are invited to post their problems to Stella McKay c/o this news-

TESUNDAY SCHOOL LESSON

By Rev R. Barclay Warren B A. B D.

Paul's Conversion At Damaseu Acts 22: 3-16 Memory Selections: I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord. Philippians 3:8.

With this lesson we begin series on the life and letters of Paul. Logically, the study begins with the story of Paul's conver sion. This educated young man was at first bitterly opposed to those who were followers of the teachings of Jesus. He watched over the garments of those who stoned the saintly Stephen. Per haps it was then that his conscience began to prick him. When going to Damascus to ar-

rest other Jews who had taken up with the new teaching Saul as he was then called, was con fronted by Jesus. (See 1 Cor. 15:8). That vision of Jesus chan ged his life. He yielded himself to Him. Humbly he asked. "What shall I do, Lord?" From then on he was an obedient follower of Jesus Christ, his Lord. Not everyone is so bitter

against the way of Christ as Saul was. Neither does Jesus appe to all as he did to Saul. But the fact is that by nature we are rebels against God. There must ome the time of self-surrende to Jesus Christ. We must be born again. Then we will go forth to serve. Our ministry may be small compared with Paul's but nevertheless it is important. Dear Reader: Have you met Jesus Christ and surrendered your all to Him? If you haven't, begin to read your Bible and

g feet are likely to be- pray. Turn from your sins in

Double Take-Ten-year-old twins, Bill Cornelison, at left, and Don, at right, show off their twin heifers. The calves, named Alpha and Beta, have prize-wining parents.

simple faith to Jesus Christ. With the help of His Spirit you can.
Only when we find deliverOnly when we find deliverthe help of His Spirit you can.

Only when we find deliverance from sin through faith in Jesus Christ do we find harmony March, any year. The spring bulbs which thrust and peace and joy. Life then has purpose for we have found a worthy goal. Surrender now. up green shoots into February's

March At The Turn

It can't be long now. A warm February raised hope in our bearts for an early spring, hope which March chilled in a hurry. But the chill can't last too much longer, not with the sun where it is, lighting the east windows once more in the mornings and setting almost west again. The wild and growing things have begun to respond. Robins which came north in flocks ten days ago are still here. They can, and occasionally do, back-track; but this time they are staying, finding shelter in the brushy valleys and the pines of the hills, waiting it out. On sunny morn-ings, even when the temperature

has been at the freezing mark and below, they have chittered

and even essayed a few songs. The songs were tentative, but unmistakably robin songs, hopeful if not exultant.

A few chipmunks have been the stone walls and even pausing in the sun. An occasional wood-

chuck is at his predatory best in

warmth have relaxed a bit, and some of them have been frostnipped: but daffodils, even in the of icy nights, have gone right ahead with their budding. They are ready to spread their color as soon as two or three hospitable days come along, end-to-

much of March. We yearn for spring. But with March half over, spring is inevitably not far ahead. - From The New York

Medical Hint

Migraine in the Chest. A pain in the chest may not signal heart trouble. Instead, it may be a form of migraine. In a recent study of several hundred patients with migraine headaches, a large proportion were found to have palpitations, racing pulses and chest pains too. In some, the chest pains were much like those of angina. Yet migraine, rather A few chipmunks have been out and around, scurrying along that the cause. The study showed, too, the stone walls and even pausing in the sun. An occasional woodchuck has been seen, hungrily looking for food after a long any head pain.

Lots of Variety One of the fine things about gardening is the wide range of special interests. Anyone can soon become an expert along certain lines of his own choosing Some people like to concentrate on rock gardens, others on win-dow boxes, or an extra fine lawn of, say bent grass. Others go in for rare dwarf plants or special borders of various distinctive colors. Still others accept the challenge of shaded quarters and with tuberous begonias and other plants that actually prefer to keep away from the sun, they make a brilliant showing. The seed catalogues will help in choosing plants for any of these choosing plants for any of these special purposes and, of course, for the more advanced there are all sorts of other literature. gives one quite a thrill to be pointed as "That's the person on our street or in our town that grows the best of this or that.'

At the Back

For screenings, fences, veg-etable gardens, walks and other places there is a wide assortment of quickly growing annual flowers. These plants will reach two to ten feet high in a few weeks and will make just as good a screen or background as perman-ent shrubs and hedges. In most Canadian seed catalogues along with the date of flowering, hardiness and other factors, will be listed the mature heights and usually some indication of the speed these flowers grow. In the tall category are cosmos, holly-hocks, giant zinnias and marigolds, spider plants, ornamenta sunflowers and many others.
Planted well apart and in good soil these will form a blossomin background for the regular flow ers and will hide practical bits of the backyard we do not wish every passerby to see. For the same purpose one can also use annual climbing things like nas-turtiums, sweet peas, scarlet run-

Moving Transplanting is one of the most important and commonest jobs in gardening. Even the tiniest flower or vegetable plants

ner beans, morning glories, an-

nual hops, etc.

moved if a few simple rules are followed. The main thing is to followed. The main thing is to keep the roots undisturbed, to keep away from the air and to cover quickly and firmly with fine moist soil. Watering during and immediately after transplanting, unless the ground is very moist is essential and also if possible a little shade for the first few hours or a day or two. With big things like trees and shrubbery, it is also advisable to tie firmly to a stake to prevent the wind loosening. Where feasible and there are only a few things and there are only a few things to move, one should do the job in the cool of the evening and preferably when there is no wind.

Above all it is most important to cover the roots well and press the soil firmly around them. To speed growth and lessen the shock of moving sprinkle a little chemical fertilizer around but not actually touching the roots. Why we Cultivate

Destroying weeds is only one f the reasons for cultivation The big gain is the improvement n the texture of the soil. Cultivation lets in air, breaks up the soil makes it more open, or as the

experts say, more friable. Porous, loose soil will absorb and hold more moisture and will dry out much more slowly in dry weather. Earlier Maturity On the market are certain bro-

mone sprays, which will make things like tomatoes, cucumbers, melons, etc., fruit faster and earlier and also very substantial o often in our climate the first so only in a limited way. That's in handy but they must be used fine for some plants but deadly

sometimes have to be moved, to give them room to develop. When

HOW MUCH DO WE KNOW ABOUT CANCER?

By Richard Kleine NEA Staff Correspondent

NEW YORK-(NEA)-Cancer i normal cells gone berserk. Without any reason that science has yet discovered, honest, hardworking cells suddenly change into evil organisms, seemingly bent on the destruction of the animal in which they live. Un-checked, they accomplish that

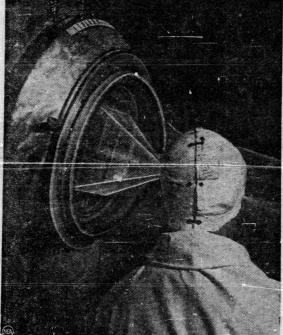

While science is attempting t find something that will do that checking, the present concensus

Here is how cancer operates, as closely as science can paint the tragic picture at the moment There is always an orderly replacement of cells going on in the body. Old cells wear out — as when you peel after a sunburn and new ones are manufactured jured, this function is stepped up automatically, but, after the injury is healed, it slows down

In cancer, this stepped up pro duction becomes the rule. It starts in some part of the body. Cells are turned out faster than the body can use them. The unneede cells just pile up, forming a

If this dread stock-piling is or or near the surface of the body, a lump is noticed. If it is deep inside the body, the signs are harder to detect. At this early stage the growth is slow. But a point is reached when the

cell production shifts into high gear. Cells multiply endlessly, ceaselessly. The pile increases Bits of it break off and, in a proc-

"Cobalt Bomb" is new technique in the war against cancer. Here a patient is treated for head cancer by being "bombarded" with cobalt particles.

a lung is overrun, perhaps the stomach or intestines become cancer-wrecked. Thus, these accumulated cells eventually kill two themes — annual physical check-ups and recognition of the early danger signs. The proof of the wisdom of that knowledge is Cancer's death is slow and pain-

That is the course of a cancer In America at least 225,000 people will die of cancer in 1953. Hundreds of thousands of others will contract it. If the current- rate continues, one-quarter of these

early danger signs. The proof of the wisdom of that knowledge is the fact that doctors themselves have one of the lowest cance mortality rates of any group. The American Cancer Society esti-mates that 70,000 people who died of carrier last year could have survived had they gotten treat-

ment soon enough.

Later in 'the disease's course, there is still some hope. Cancer therapy uses three weapons— surgery, X-ray and radium. Basically, these are the same methods that have been used for 20 years. Techniques have been improved, but the methods themselves are unchanged.

The new techniques save some lives. Surgeons, for example, can do more than ever today because of better anaesthetics, infectionpreventing antibiotics and similar

cancers that are inoperable. Radium and X-ray - and the Hospital-aim at destroying the cancer by bombarding it with particles that halt its growth They destroy nearby blood vessels, thus depriving the cancer cells of the food they need. But there are still many cancers tha are too far advanced to respond

lung or a stomach to get at a can-

If all treatment fails can at least make a cancer na tient's suffering less intense, with new pain-killing drugs.

vital organ which might be

Actually, there are hundreds of types of cancer. Leukemia and Hodgkin's Disease, which attack the bloodstream, are forms of cancer. Cancer can occur in the bones or on the skin. It can start in any part of the body where the cells divide, which means all cells except the lens and cornea of the eye. The commonest is cancer of

What causes a cancer to start? some causes are known-a fair person may get skin cancer by staying in the sun too long over a longe period of time. And peo ple who paint radium dials on watches-and point their brushes by licking them-may get cancer of the stomach from the radium they swallow. Constant irritation cancer which may attack longtime pipe smokers.

But the sun, the radium and the causes. There is probably one ommon cause behind those and other cancers. It could be a physical change in the nucleus of the cells. It could be something chemical. It could be a virus. It

could be many things.

There is some indication that cancer may be hereditary, and some indication that hormones the chemicals produced by glands

-have an influence.
