ROAD TO THE ISLE

WHEREVER two or more Cape Bretoners meet these days chances are they'll talk about "The Causeway," a man-made strip of land to connect the Nova Scotia mainland with Cape Breton Island.

It's only within the last two years that many of the oldtimers have been able to take a profound interest in a direct link across the scenic Strait of Canso.

Within their memory some permanent crossing was much talked about but the dream never bore fruition - until September of 1952 when the first fill was dumped from the main-land into the tide-drift waters.

Now Nova Scotia's "Road to the Isles" is rapidly nearing the Cape Breton shore and arrangements have been made to have a band of 100 piers lead the first cavalcade across, although the date hasn't been set.

When completed the massive project will be matched as an engineering feat by only two others in the world, one at Scapa Flow in Scotland and the other in India.

Although it will span only 4,200 feet of water it will measure about 7,000 feet long because of approaches. Estimated cost was originally \$22,750,000 but final cost is expected to be higher. The province's share is a maximum of \$5,000,000.

When completed the causeway will have a sidewalk, single-track railway line and 24-foot highway a part of the trans-Canada route. It will cut about an hour from the time it now takes ferries to move railway cars and automobiles across the strait.

Shipping will be able to pass through a navigation lock being constructed on the Cape Breton side, through a neck of land rather than in the causeway. It will be 850 feet long by 80 feet wide.

The late Premier Angus L. Macdonald, whose favorite dream was that he would lead the piers across the Strait, at least saw the start of the project. "I am sure it will have a great economic effect on the future of Nova Scotia," he said.

WITH THE FRINGE ON TOP

By Lewis Milligan
"PRO-STRIKE FEELING" Said Strong Among 135,000 Railwaymen. This headline in large type appeared over a Labor News story in the Toronto Daily Star, July 24, referring to nation-wide voting by non-operating employees of Canada's four major railways.

The story stated that the actual results of the voting would not be known until August 2nd. "The deadline by which members of the 14 unions involved must have their ballots returned to their own unions." So that there were still nine days to go before the voting was complete. The forecast was said to be based on "careful and unofficial reports" which indicated a "strong pro-strike sentiment among rail workers."

Whether we consider this as an incentive reward is not of particular importance here. It is the justification and acknowledgement of the good life.

In our worldly affairs the same fact holds true. We know that we progress because progress has its acknowledgements and rewards. The rewards may not appear the same to each individual, but they are there. To one the increment to better effort is a better salary, to another the satisfaction of an ambition, the urge to lead others, the desire for the recognition of our fellows. However we may label it, it is a reward of accomplishment.

We say that the laborer is worthy of his hire. We acknowledge that this hire is based on some specific volume of work, that when more is asked we must provide some return for this added demand. We must progressively increase the incentive to pay for the increased labor that goes beyond the mere satisfying of essential needs. We have framed laws to give it body to our acknowledgement. So we concede time-and-a-half or double-time as an incentive to make it seem reasonable for men to work beyond some basic pattern of production.

Rather than grudgingly, when a man has accomplished, when he has benefited from whatever incentive may have attracted him to added effort or devotion, and has received his measure of reward, we seem to change our whole thinking. It might be said that we put this thinking in reverse. Where we once said we would pay more for better effort, we now say that the accumulation of these rewards for larger effort are the fairest possible game for the tax collector. We who have been urging that incentive is the way of accomplishment tacitly submit to progressive taxation, which means a progressive deterioration of the incentive on which we pin all our hopes. We say in substance: "There was no intention of letting you keep the rewards you were offered, and the greater the accumulation of rewards that signaled your greater effort, the more we propose to take from you."

We say to those who have done nothing for their fellows: "The less reward you have, the easier we will make it for you."

portion of those millions of dollars would have to be paid by the taxpayers who are already over-taxed. The many thousands of men who are at present unemployed would be happy to change places with those railway workers without any fringes at all.

EXPRESS YOURSELF

By Ambrose Hills

I PICKED UP a neighbor's son in my car the other day and drove him downtown to his first job. I could tell that he was quite nervous, and since we had a good deal of time I took him into a restaurant for a cup of coffee and a chat. He has no father of his own, and I knew that he needed a word or two of reassurance. I knew absolutely nothing about being an architect, while he knew plenty. He had a degree to prove it. But there was something that I could tell him.

When I was a young fellow graduating from school (I never did get to college) a large proportion of the population was self-employed. Today things are different. Most young fellows find a lot of employers. I remember some information on the art of being an employee that I had picked up a couple of years ago in a Fortune Magazine article. The article said that the most important ability of an employee of any importance was to learn to express ideas in writing and in speaking. Perhaps a soda jerk doesn't need much skill in expressing himself, but the moment you move up the ladder to where you are required to work through other people - your effectiveness depends on your ability to speak or to write.

"See, I'm glad to know that," the young man said. "But how am I going to learn how to do these things?"

This question wasn't quite so easy to answer. In fact, I couldn't give him an answer just out of my hat. I promised him that I'd think about it and then write him some instructions. This is what I wrote:

"Dear Bill: I am attaching three items. The first is a political speech. The second is a small Bible. The third is a country weekly newspaper. Please read the front page of the weekly newspaper and underline all the nouns. You will find a lot of them. Then read the Bible, particularly the Sermon on the Mount. Again, underline all the nouns. Again, too, you will find a lot of them. Now read the political speech. Underline the nouns if you can find any! They are pretty scattered. This fellow did not get elected. I know him well. He lives in my own constituency. We was opposed on the hustings, by a man with about as much education as you have. The uneducated fellow licked him to a frazzle. You will notice that the defeated candidate, whose speech you have before you, didn't use very many nouns. He didn't talk about real things. He was full of windiness, and short on facts. His opponent talked about the price of wheat, eggs, cream, and said clearly what he thought about each. Our only friend talked a lot of fancy theories that weren't tied down to facts.

"Now, Bill, doing these three things will not make you a fancy speaker or writer. But it will make you effective and will keep you from being gassy and mysterious! Good luck!"

SOIL CONSERVATION AND IMPROVED LAND USE TOUR

It was recently announced by Mr. T. R. Hilliard, Associate Director of Extension for the Ontario Department of Agriculture, that a Soil Conservation and Improved Land Use Tour of three days duration is being arranged by the Ontario Department of Agriculture with the co-operation of the Junior Farmers' Association of Ontario.

The purpose of the tour this year being to offer selected young men an opportunity to observe soil management and land use practices of farmers as they apply to mixed farming and cash crop areas.

The tour has been arranged for August 31st and September 1st and 2nd. The delegates will assemble at the night of Monday, August 30th. The following morning they will leave by bus and will spend three days in the counties of Middlesex and Elgin visiting such farms as those of Alex. M. Stewart and Son, Alisa Craig; Lawrence Kerr Chatham; David McEwen, London; and the site of the Cash Crop Day at the Ontario Hospital Farm, St. Thomas.

The presentation of information on the tour will be under the general direction of Prof. N. R. Richards, Head of the Soil Department, Ontario Agricultural College.

Each county and district in Ontario has the opportunity of sending one Junior Farmer delegate on this tour. A set of colored slides and a commentary will be compiled and made available to the delegates following the tour for showing at educational meetings in their home county or district.

Skinny men, women gain 5, 10, 15 lbs.

Get New Pop, Vim, Vigor
What a lot of fat is on out, why? Well, it's not so much as you think. Thousands of girls, women, men, who were once healthy and strong, are now thin and feeble. They don't know why. They don't know how to get back to normal weight. They don't know how to get back to normal vigor. They don't know how to get back to normal life. They don't know how to get back to normal happiness. They don't know how to get back to normal health. They don't know how to get back to normal energy. They don't know how to get back to normal strength. They don't know how to get back to normal power. They don't know how to get back to normal courage. They don't know how to get back to normal confidence. They don't know how to get back to normal faith. They don't know how to get back to normal hope. They don't know how to get back to normal charity. They don't know how to get back to normal love. They don't know how to get back to normal peace. They don't know how to get back to normal joy. They don't know how to get back to normal happiness. They don't know how to get back to normal life.

Helicopter pilot Bill Waring, 32, struggled about seven feet through the Northern Ontario bush to reach a mining camp near Geraldton where he turned up with the words: "I wasn't lost; I simply underestimated the terrain."

Waring had been missing for four days on a supply trip to mining camps. An employee of the Spartan Air Services of Ottawa, he had ditched his helicopter in a small lake 70 miles southeast of Geraldton when it apparently developed engine trouble.

He was slowed down drying his sleeping bag after two storms. Then he had to swim across the lake, near Geraldton, but he was in good shape when he reached the mining camp.

James Mason's farwell, James Mason left the Stratford Shakespearean Festival to the cheers of "Bravo" from the audience. He played Angelo in "Measure for Measure" in which he had had the lead for six weeks.

With other members of the cast he received a warm ovation at the festival and when he took a solo bow he was warmly moved by the tremendous applause.

The successful British film actor, now living in Hollywood, had returned to the stage for the Shakespearean festival after nearly 20 years' absence. He played Angelo in "Measure for Measure" and Oedipus in "Oedipus Rex."

The Ontario Parks Association meeting at Guelph decided to name a committee to study job evaluation, qualifications and certification of park employees in the province. A resolution asking the Ontario government to transfer parks before improvement recreational facilities was also passed.

James T. Bennett of Guelph was elected president, succeeding Elroy Lippert of Kitchener.

LIVES ENRICHED
There can be no stopping the drift between country and city that is motivated by economic and occupational interests. The gateway must be kept open and free so that young people may develop their talents within the environment of their choosing. But liberation of rural people from the restriction and repression formerly thought as a part of rural life is enabling them to expand mentally, enriching and broadening their lives.

8 IN A SERIES... YOUR HYDRO AT WORK FOR YOU AND YOURS

YOUR HYDRO Provides More Power for Ontario

The official opening, August 30th, of the Sir Adam Beck-Niagara Generating Station No. 2, by Her Royal Highness The Duchess of Kent is in a large measure a tribute to the achievements of those who planned and constructed this great development. The Engineers, the Men of Labor, the Suppliers and the Contractors, who contributed to, and made possible the putting of this giant generating station into operation, well ahead of schedule.

By December 31 next, 6 units of this plant, with an installed capacity of 600,000 horsepower, will be in operation. Ultimate 16-unit capacity, including pumped storage, will be 1,828,000 horsepower.

Measured in horsepower the output of this plant is impressive. Measured in human benefits it is even more significant. New power for homes, for industrial plants, for business and for farms... more power for progress and better living for the people of Ontario.

ONTARIO HYDRO AT WORK FOR YOU AND YOURS

LISTEN TO THE OPENING CEREMONIES - MONDAY, AUGUST 30th

On the Farm

BRIEF NOTES FOR THE BUSY FARMER
By Haldimand Henry

It seems that every week one hears about some member of a farm family who has met with a serious accident - too frequently they are fatal - in the pursuit of their daily routine of farm work. Probably this is to be expected now that farming has become so highly mechanized. However, it also emphasizes the extreme necessity of observing the greatest possible care in the operation of this equipment. The more machinery that we have the more care we need to observe.

Some very helpful hints in the safe operation of farm machinery are contained in a new circular issued by the Ontario Department of Agriculture and you can have a copy by calling on your Agricultural Representative. Many of the suggestions are offered in the form of "Do's" and "Don'ts" and a look at this circular might mean the saving of a life, probably your own. Be sure to pick up a copy as soon as possible.

Late blight is showing up in some parts of the province and tomato growers in Haldimand should be on the alert for its appearance here. So far all the reports seem to have had to do with potatoes but there is every possibility of this spreading to the tomato crop. According to Prof. C. B. Kelly of the Department of Botany at the O.A.C., tomato growers should continue the spray schedule recommended in the Protection Calendar for Vegetables. More than five sprays may be needed and especially so should the season turn out to be a wet one. continue Frank Kelly.
