Some Tales of Jumbo **Famous Elephant**

Of all the famous animals the London Zoo has housed in its century and a quarter of existence, none-despite the great fame of Brumas the polar bear -ever captured the imagination of the entire country as did Jumbo. The elephant went to Regent's Park ninety years ago, a scruffy little baby, and his departure for America, eighteen years later, was accompanied by nation-wide lamentations

Jumbo was captured when rather less than a year old on the banks of the River Settite in Abyssinia in 1861. His captors sold him to the Paris Zoo. After staying in Paris for three years, mbo was exchanged for a rhinoceros; Paris got the rhinoceros, and the London Zoo got

Jumbo arrived at Regent's Park in June, 1865, and was handed to a keeper named Matthew Scott. The youngster stood only four feet high and was in a filthy condition. His feet had been neglected and had become malformed. His temper was terrible; he destroyed the doors of his house and drove his tusks through the iron plates. Scott took hold of Jumbo by one ear, and Superintendent Bartlett took the other, and they thrashed

Later Jumbo was taken into the gardens and meekly took children for rides on his back at 2d. a time; but once back in his se, his behaviour continued to be bad. Nevertheless, he became a great money-maker for the Zoo. At first keeper Scott was allowed to retain all those twopences, but there came a time when the Zoo authorities decided otherwise. From then then onwards Jumbo made £300

a year for the Zoo Jumbo's tusks, broken when he thrust them through the iron plates, began to grow again, but they emerged through the skin near his eyes. It was decided to operate. But as the operation began, Jumbo gave a scream of fright and tried to kill his keeper, who just managed to escape. For the second attempt at an operation, all precautions were taken against Jumbo's possible behaviour, but this time he was

as good as gold, just as if he understood that he would be relieved from pain. But once back in his house, he continued to raise Cain. Jumbo was quite a problem to the Zoo. It was decided to find a mate for him. The Zoo bought Alice, a tiny female eleph for £500 from an East End dealer. Superintendent Bartlett and Alice walked all the way to

Regent's Park and then sat down together to supper.

Jumbo at first showed no sign of being influenced by female society; indeed, his behaviour got worse. But the people who ocked to the Zoo to see him knew nothing of what went on behind the scenes; when he ap-peared in public he was as docile

The Zoo put up with him for sixteen years, then the Superinpetitioned the Zoo Council to be allowed to purchase a powerful rifle to shoot him. But at that critical moment came a letter from New York, from Mr. Phineas Barnum, proprietor of "The Greatest Show on Earth," offering £2,000

for Jumbo. This was accepted and his life was saved. As soon as the news spread that Jumbo had been sold to Barnum, Britain went wild with excitement. Nobody outside Zoo circles knew that Jumbo was scheduled to be shot. Thousands of letters reached the Zoo from both children and parents. Music-hall singers sang ballads about Jumbo. One typical verse went as follows: "Jumbo said to Alice, 'I love

Alice said to Jumbo, 'I don't believe you do;

T. V. Top Is Guestproof and Family - Resistant

The second secon

Ever have hot coffee spilled on the top of your TV set? Or have you tried to wipe off rings made by the glasses that careless guests put down on the handiest spot?

Of course you have. Probably the results were none too good and you bemoaned the damage to your set, then tried to cover the marks with a vase or a lamp. Good news for the home-

maker lies in announcement of a new laminate being used in some table-model TV sets. The new material combines the protection of plastic with the rigidity of metal. It comes in a variety of colors, to fit in with any living-room decor.

One set, for instance, comes pretty shades of coffee, sand, cordovan or gray. And beneath the color, the surface is functional. It's guaranteed not to chip, crack, peel, stain or scratch. It will stand up to heavy abuse from guests or children and keep its good ooks meantime.

If you only loved me, as you You'd never go with Barnum's

And leave me in the Zoo." Another song was entitled: "Why Part With Jumbo?" Then there was the "Jumbo March" for the piano which all the little girls and boys who loved Jumbo learned to play.

There were letters to the newspapers, full of indignation: there were protest meetings. But the Zoo stuck to the bargain: £2,000 for Jumbo as he stood; Barnum to pay all transport expenses and to arrange the transport.

There arrived from America "Elephant Bill" Newman, said to be an expert in handling elephants, and a Mr. Davis Barnum's personal representative. Little did they know what was in store for them. Jumbo, now eleven feet tall,

walked placidly enough into a travelling cage mounted on a low trolley. He was chained by his forefeet, but he struggled hard and pounded the sides of the box. He weighed six tons. Heavy drayhorses were harnessed to the trolley, which moved off and at once sunk to its axles. It took four hours to get clear of the gates of Regent's Park.

Night fell and huge crowds collected. It took five more hours to cover 100 yards, again and again the trolley sank down to its axles. The crowd took up a chant: "The Yankees will never have Jumbo."

It took all night to get to the docks; there was a procession of hansom cabs and pedestrians. At seven a.m. Jumbo had breakfast, plus a copious drink of beer given him by a weeping voman who had followed him from the Zoo.

After the beer, Jumbo was given some whisky. It later transpired that the Americans who had come to fetch him were so "het up' that Barnum offered another £1,000 if the Zoo would take the responsibi getting Jumbo to New York. The Zoo refused.

Jumbo was first put barge and then hoisted by hydraulic crane on to the Assyrian Monarch, where a huge amount of stores for his journey had already been placed. The ship, with Jumbo aboard,

sailed on March 27th, 1882. So great was public interest in Britain that daily bulletins were put into waterproof bags and dropped overboard in the hope that news of Jumbo would

on Mars is not satisfactorily answered this year it may be on September 11th, 1956, when Mars will be comparatively

Farm tractors are now so com-on on Canadian farms that they are often overlooked as a chief cause of farm accidents. The odd adage "Familiarity Breeds Con-tempt" is only too often true.

Despite the safety devices and vements manufacturers are constantly incorporating in their machines, their construction and the terrain they have to cover, make them vulnerable to care-

Here is a list of practices which may cause a tractor to upset; they are all caused by the human 1. Turning corners at high speeds.

2. Brakes not balanced with the

result that the brake on one

side operates before the other, throwing the tractor to one 3. Driving the tractor too fast over rough ground so that the driver, in his efforts to hang

1. Trying to take short cuts over steep banks and ditches. 5. Making "Jack - rabbit" starts when the tractor is pulling a heavy load, causing the tractor to go over backward.

6. Hitching loads to some part of the tractor other than the draw-bar. This makes the possibility of the tractor overturning backward very much greater.

People can be killed or injured when the following practices are

permitted:
1. Hooking up implements by backing the tractor while standing on the ground.

2. Riding on the tractor draw-bar

3. Allowing others to ride on the

or play around tractors.

cost was \$3.02 per acre.

4. Allowing children to operate tractors. 5. Allowing children to ride on

SINGLETON - Familiar enough to residents of Provo, Utah, but eyebrow-raising to strangers is Robert Collier, on his homemade unicycle. He is a student at Brigham Young University and a cadet in the ROTC. Bob says that as soon as he can save enough money, he'll add another wheel and have a

not have to be fed but there is a number of hours a tractor is used

In a study of tractor costs on 124 one-tractor farms - 83 in Ontario and 41 in Quebec, the Ecnomics Division, Department of Agriculture, Ottawa, found the cost per hour of tractor use varied from 83 cents when used 694 hours per year, to \$2.14 when used only 119 hours. Similar differences were found for many of the tractor operated machines such as ploughs, seed drills, combines, forage harvesters and hay

Cost per acre for most farm operations on the 124 farms studied was less where tractors were used than with horses, ever with the same size implements. Ploughing with a 2-furrow plough and 3 horses, an average of 34 acres per year, cost \$9.42 per acre. With a 2-furrow, twoplough tractor, ploughing an average of 45 acres per year, the

Mowing hay the average horse drawn mower on the Ontario farms cut 31 acres at a cost of \$2.58 per acre. With a tractor, mowing on the average 54 acres per year, the cost was \$1.64 per acre. On the Quebec farms, horse mowers cut an average of 40 acres at \$2.42 per acre and the tractors 77 acres at \$1.18 per

These records indicate that on small farms a definite saving in machinery costs can be made by excl. inging work with neighbours. Where one farmer owns a combine, another a forage harvester, perhaps another a hay baler, by exchanging work each machine can be used double the number of hours. It can be done on a basis of exchanging work or by charging regular custom rates for each machine.

Guard of Honor For Two Old Goats

When information reached a native police chief in New Guinea the other day that the administrator and some other big-wigs were to pay a visit, he hurriedly got his ten-man squad spruced up and ready for the reception of the VIP's.

An aircraft landed just about the time when the admin was due. The police chief, his squad lined up behind him, asked the pilot whom he had on board. "Just a couple of old

goats," the pilot replied.

The police chief, accustomed to the disrespectful aspersions sometimes cast on high personages, took it for granted that the administrator was one of the "old goats" and when the landing door opened, got his men to snap to attention and present arms.
Out shuffled two very ancient goats which had been ordered from a neighboring island by a

and too soon, are probably the most common mistakes in gard-ening. One should forget all about the tiny seeds one is sowing and think only of the size of the plants those tiny seeds will grow. Even little fellows, like alys-

one with any interest in this sum or portulaca, or leaf lettuce a few extra early things too. and green onions, require some space to develop properly. The all plants or seeds at once. Just safe rule is about at least half put a few of the hardiest in, a as much space between plants as they will be high when full time, and if these come along grown. With small flowers and vegetables this means at least gained considerable time and we can boast to the neighbors To a couple of inches between and with zinnias, peas, beans, etc., at least four to six inches. With speed these very early plantings, we can boost with a little quick dahlias and corn this should be 12 to 18 inches. The rule for started plants from greenhouse depth is three times the diameter of the seed or root planted This means that really tiny seeds should be merely pressed in the soil while such things as beans and peas should be covered about an inch deep. The bulbs or corms of tall flowers like gladiolus and dahlias should go down from six to 12 inches.

Gardening does not require expensive equipment. But it will be easier with a few special tools. With most of this hand equipment it is advisable to have long handles so that one does not have to stoop. It is surprising how accurate and quickly one can do thinning and weeding of even tiny stuff with a long sandled sharp hoe or cul-tivator provided the same is arrow or comes to a point. The D shaped dutch hoes are excellent things for killing weeds and loosening up the top soil, but one must be careful in using too close to sprawly vegetables and flowers. There are all sorts of tiny rakes, trowels and cultivators. With any of this equip-

This Oak Tree Inherited A Legacy

The will of Miss Lydia Wilberforce, of Fulford, York, in which she left her 16 dogs a house, furniture and £30,000 for their keep, is by no means unique. Many eccentric women think more of their pets than they do of their fellow crea-

Some years ago Miss Sorabji first Indian woman to read law at Oxford, received a brief to defend an elephant that had been the favourite of a Hindu ruler. In his will he had left an entire plantation to the elean entire plantation to the elephant, which was given the right to eat as much fruit as it liked, tear up trees or trample

anything it chose.

The new ruler considered this to be wasteful and had the animal ejected. The mahout (keep-er) then appealed to Miss Sorabji and invoked her aid. Fortunes For Pets

As Miss Sorabji entered the court, she stopped to pat a dog in her path. To her astonishment the judge instantly ex-claimed: "Whoever interferes with the grant of the plantation to the elephant shall be trampled to death by wild elephants This decision was because the judge decided to let the reactions of his favourite dog point the way. When it re-sponded to Miss Sorabji's patting he concluded that her client must be in the right.

In 1937 there was a tremendous stir over the will of a widow who left a fortune to her peke, Poochey La La, together with a sizeable slice for the local clergy to offer prayers for its doggy

ing to Mrs. Mary S. Morrow of Florida, was left £42,000 to provide for his declining years— with only one proviso—that he must never be allowed to mate, And Tommy Tucker, an enor-mous 5-year-old alley cat that had wandered into Miss Louise Baier's home in New York and made itself the centre of existence, was left £2,000. Dogs and cats don't live very long, and even where the courts

uphold such legacies, waiting relatives usually get the money within a few years. But when Miss Vera Barnes of Cambridge, Mass., left £7,000 to her parrot, relatives gave up hope. It was but four years old and parrots have been known to live to be a hundred.

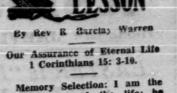

What is perhaps the strangest will was made by a man who had one of the strangest "pets."
Col. W. H. Jackson of Athens,
Georgia, would sit each day under a giant oak.

He had known the tree since

he was a boy, and as the seasons changed he watched it change, too. He feared that after his death it would be cut down, so in his will he gave the tree ownership of itself together with the land within a radius of 12 feet from the outer edge of

The language of tones belongs equally to all mankind, and melody is the absolute language in which the musician speaks to
