# ANNE HIRST Your Family Counselor -

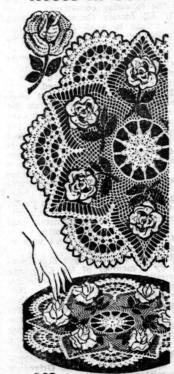

"DEAR ANNE HIRST: 1 am 55 years old, and a year ago I met a lady in her early 40's who is very attractive. She has a lovable nature, a fine education and no faults that I can see. Her personality and her sense of humor make me feel so at ease perhaps because I am very much in love. But she will not discuss

love nor marriage!
"She was married once, 20 years ago, and I understand it was a tragic disappointment and ended in divorce. Financially, she is well off, so am I, and we enjoy so many things together that I feel sure I can make her appy ... Just now she is away; her letters are newsy and witty, but never does she even say she misses me. When we are together she is always kind and sweet, but this is the only indication that she is fond of me.

"Could the difference in ages be the one barrier between us, and perhaps she is reluctant to say so? (I am in perfect health). After seeing her regularly for a year, haven't I the right to know how she feels about me? Please don't see me as an old man with silly ideas, but I feel I must know where I stand.

WORRIED" \* It is not only young men in \* love who grow impatient of · delays: older ones like yourself do, too. Your house and \* your heart await the woman who will share them, and you long for this one who you be-\* lieve can make that house a home. After dating her for • nearly a year, I agree that the

#### Roses in Color!

Needlecraft in our Laura Wheeler Catalog for 1955. Crochet, knitting, embroidery and lovely things to wear. Iron-ons, quilts, aprons, novelties — easy, fun to make! Send 25 cents for your copy of this book NOW! You will want to order every new design in it.

speak, and for her to answer. Her reluctance to discuss the future may be caused by her unfortunate marriage; yet that was 20 years ago, and it seems unlikely that she can misconstrue your assiduous attentions since you met. She does enjoy your friendship and is
 apparently satisfied with the
 status quo, though it does not

satisfy you.
The difference of 10 years \* in age might have been vital when you both were younger, \* tion that as the years fly by, such a difference matters less \* and less. In later years, one \* considers the other as a mature companion, and thought-\* fulness, temperament and char-\* acter become deciding factors. \* Whatever this woman's rea-\* son for delay, however, when \* you tell her frankly that you \* want to marry her, she cannot \* gracefully withhold her answer. Go ahead, and good luck.

A YOUNG TYRANT "DEAR ANNE HIRST: I just can't understand my boy friend. He says he loves me, but he still goes with other girds, and I'm not supposed to mind! If I date anybody else he gets furious.
"Would it be all right for me to go out with other boys, anyhow? I have had several chances. I am not terribly in love, but I do think a lot of my beau and I'd hate to lose him

WONDERING GIRL" \* Date any boy you care to, \* if only to show this lad where \* he stands. He should certainly value your friendship more

\* than he seems to, otherwise he \* is not worth your time. When will young girls learn that any young man to whom \* they are not engaged has no right to dictate whom they shall date? To submit to such domination is to sacrifice one's \* self-respect, and also shows they are too anxious to please

Stand on your own feet, and \* don't let any young man who \* plays the field deny you the \* same right.

When one grows to middle age, the years ahead seem painfully few. They are too pre-cious to waste apart when they might be spent together. Anne Hirst's opinion is valuable to thousands of readers, and she your problem. Write her to Box 1, 123 Eighteenth St., New Tor-

> GOLF PROBLEM "A golf game involves all

kinds of problems,' Nussbaum told his wife. "Take the match I had with that Scotch fellow McGregor at the civic center course this morning. We're all square at the seventeenth hole, playing a two-dollar nassau, when McGregor loses his ball in a thick rough. Naturally I go over and help him look for it, on account I don't want any monkey business from McGregor. He can't find his ball, however, and I start walking toward the green. Suddenly he yells after me, 'It's okay, Joe, here was that little ball of mine all the time.' I look back and there I see a ball right on the fairway, all beautifully teed up for a shot to the green, with McGregor happily pulling an approaching iron from his bag. And here, my dear, I am faced with a very serious problem. Just how am I going to break the news to McGregor that all the time I've got his

Send THIRTY-FIVE CENTS (35') in coins (stamps cannot be accepted) for this pattern. Print SIZE, NAME, AD-DRESS, STYLE NUMBER. Send order to Box 1, 123 Eighteenth St., New Toronto, Ont.

#### 'The Wicked Bible'

A man who spent the last ten years of his life in prison left a trust fund which saves every resident in the Buckinghamshire town of Datchet a twopenny rate every year. He was Robert Barker, printer

to Queen Elizabeth I, and he

was responsible for printing the first edition of the Authorized Version of the Bible in 1611. Barker held a monopoly of printing Bibles and Prayer Books. Twenty years after bringing out the first Authorized Version, another edition, with his name as printer, became known as "The Wicked Bible," the most startling of many mistakes in which was the omission of one word in the seventh commandment to make it read: "Thou shalt committ adultery." For this Barker was fined £200 by the Star Chamber, but failed to pay up, so he went to jail where he remained until he died ten years later.
But his trust has prospered. Its income has risen from a few pounds to £450 a year, nowadays nainly used for street lighting

CORNERED - That's the

again the next day."

While I was in England my only complaint was that I was never really warm enough for comfort. Since I returned to Canada I haven't had any reason to grumble on that score! For a whole week our thermometer registered a high of from 90 to 98. I would gladly have changed a little of our Cana-dian heat for England's fresh, cool breezes. However, today the weather has been just perfect . . . may it so continue. Now, maybe I shall be able to get caught up on the extra work that has accumulated during my absence, and which I have been promising myself I would do just as soon as it gets a little It seems so strange not to

have the cows around any more. I am not used to it even yet. Of course there is a lot less work for Partner, and much less worry for me. By now the heat and dry dry weather would have meant a falling off in milk production, and probably a shortage of water. As it is there is enough of everything for the young cattle - not to mention our one dry cow! Partner had every inention of selling that same cow later on but now he thinks perhaps he will keep her as she is due to freshen in September, which means we should have milk for the house once again. Not having the cows to worry about is one thing, but having to buy milk is something else again. I never realized until now how little milk there is in a quart bottle. If Partner and 1 have one good drink there is hardly enough left for the cats.

Now how does this farm milk versus dairy milk realy work out, I wonder? Just for fun, let's figure it out. Supposing we sell the cow, maybe for \$180. That \$180 would buy us a quart of milk every day for twenty-seven months, at 22 cents a quart. At the end of that time there would still be no prospect other than to buy more milk.

But if we keep this cow and she produces a calf and thereafter gives a normal supply of milk, then we could have two quarts of milk a day for the house for at least nine months, which at the present retail level would be worth \$118.80. In addition to keeping the house supplied the cow should give enough milk to raise three veal calves, two of which we would naturally have to buy. When sold the calves should realise approximately \$50 a piece. At the end of her lactation period we could, if we wanted to, sell this same cow on the stock market and probably still get \$120 for her. So our cow would bring us in a total of \$388.80 less her feed, which for one cow wouldn't amount to very much, possibly \$100 or \$150. But since we wouldn't be paying it out in hard cash we would hardly be likely to miss it. Of course these figures may not agree with the way farm economists might work things out - it is merely the way this farmer's wife looks

tion the girls will be in it on the situation - after buying take to the hobble skirt, milk by the quart. again appearing on the for While we are on the subscene in London, Engl ject of home production and con-Skirt's slimness is accented sumption, how about a vegewide, flaring three - quo table garden? before they have a change get "woody". And of course or family doesn't always start two — there are bound to 20,000 Leagues Under the nventions, for instance. ated the submarine "Nauvisitors every so often & always say, never mind wheth and to-day we take sub it pays or not, at least kt have small garden so the put men under water in selfhave small garden. So we a men under water in selfually end up by putting in entained diving-suits which en-bled them to walk about withfew vegetables — but her have to admit it is general Partner who does the hora out any air-pipes from the sur-face—and nowadays young men by the hundred don frogmen's outfits for the sheer fun of it. Now when it comes to h we don't do any worrying we just take what nature Walt Disney's film of "20,000 League Under the Sea" has brought the Jules Verne fantasy vides on our farm and let i at that. We have early to the screen, now that the fa-mous novelist's description of under-water suits has become present-day reality.

True, a suit of the type crea-ted on paper by Verne was acmond cherries that pro plenty of competition between us and the starlings and no

Our apple trees are old wormy, the early apple plentiful but not very big i ted on paper by Verne was actually invented within a few years of the novel's publication in 1870, and the Disney research them in half- cut off the b in 1870, and the Disney research experts managed to trace it.

It agreed with every detail outlined by the novelist, including a diver's helmet, a close-fitting rubber suit, and an aqualung. It was hand-made and weighed 225 lb., compared with the modern frogman's outfit of a total 40 lb.

First demonstrated in 1879, the suit was a revolutionary, but not entirely successful, step towards sea-bed exploration.

Verne may have used his imagination to make life under water a relatively simple matter, but he was certainly not the first man to think about the subject.

Man has sought to conquer the part and then cook them cores and all. When done go through a rotary cola sugar is added to the parand there's our apple a Plenty of it too as it is an job so I always do a good while I'm at it. Next week-the answer few questions about my in the Old Land, from file (a)

sea-bed for centuries, partly out of sheer curiosity, but also for more practical reasons. The scientific aspect is one. Reclaimng sunken treasure is another.
Vast riches were lost along
he shores of the Mediterranean in very early times, and there were always men who dreamed

sea diving goes iter Pliny described ends of which on the surface nflated bladders. It was not until the Middle ges that really determined at-mpts were made to use div-ge-suits to any great degree.

During the siege of Constanti-nople, in 1433, the Turks sought means to break the chains that closed the mouth of the Golden Horn. The only way to do this was for men to go beneath the water and remain there long enough to hew through the

So divers were equipped with close-fitting leather suits, top-ped by a huge oval headpiece, with a pipe leading from the top. Then, in the early seventeenth century, an Englishman named Repton invented what he called "water armour." A Dutchman named Cornelius van Drebbel experimented with the first submarine, using the Thames for his experiments. The "water armour" was a failure, and the inventor nearly drowned his self, but the submarine met with some measure of success.

Something approaching

modern frogman's outfit was invented by an Italian, G. A. Borelli, in 1675. Although unwieldy and uncomfortable to wear, it even had web-footed All sorts of freakish shapes and designs have been intro-

duced at various times, all of them extremely hazardous for the heroic fellows trying them out. Though they worked within reason, they were not really One of these extraordinary

diving-suits was invented in 1715 by an Englishman, John Lethbridge, of Newton Abbot. It looked something like a leather sack, with one end larger than the other. A glass scuttle enabled the diver to see, and it was suspended horizontally so that he was lying in something like a large covered-in seaman's hammock with a window at the bottom. He could only look downwards. There were sleeves for the wearer's arms, and it was inflated with enough air for him to breath for a restricted

Curiously enough, mankind seemed to give up the idea of conquering the ocean bed after this. It was not until the end of the 18th century that anyone else had a try, and this time it was a man named Kleingert, of Breslau, who designed a suit of leather jacket and drawers, over which was placed a domeshaped cylinder reaching to the hips. Air was pumped down to him through pipes attached to the cylinder, and the air pres-sure prevented water entering the suit. Descent was made with the aid of lead weights, and the diver merely released these

GOO!-O!' Case is NOT in his second childhood, despite the finger-in-the-mouth pose. That's just a quick, handy way to sample the frosting on his 64th (or is it 65th?) birthday cake at Yankee Stadium, New York City. The peppery Yankee manager celebrated his 65th (or is it 64th?) birthday by announcing a Yankee rebuilding plan that could well take two or three years to realize. (The record book says he's 65 - his wife says he's 64.)

weights when he wanted to return to the surface.

Though it failed to cause much of a stir, that invention was actually the basis of the presentday diving-suit. It was modified and improved upon twenty years

later by a man named Siebe, who later improved on it still further and designed the first successful self-contained divingsuit on which all modern equipment is based.
So diving-suits were not new when Jules Verne let his ima-gination take them to greater extremes than man had actually invented at the time.

### SURE THING

Jonathan Daniels probably covered a thousand horse races —Kentucky Derbies and other classics of the track— during his newspaper career, but none of them made the impression on him occasioned by a race between five camels at a Carolina carnival early in the century. Nobody remembers who per-suaded the owners of the five camels to stage the race, but the first thing anybody knew, news of the contest spread throughout the state, and people began to bet on the outcome.
Perplexed bookies established
initial odds of four to one against
all five camels, but just before
the race so many big bets were planked down on the one named Ben Ali—all of them, apparently, made by the Arab ownersthat the bookies grew suspicious, and refused all further bets. Furthermore, they watched the race with eagle eyes for any

sign of dirty work. The race, to all intends and purposes, however, was fairly run. All five Arab owners pressed their mounts with equal fervor and determination, and when Ben Ali won easily, the bookies could find no excuse for withholding payment to the win-ners. One of them, his exchequer badly depleated, asked the Arab who had finished third, "What who had finished third, what made all you birds bet every-thing on Ben Ali?"

The Arab explained, with a grin, "Mister, Ben Ali is what

is known in our country as a bell camel. From the day of their birth, camels are taught to follow the bell camel!"

#### How Can 1? By ANNE ASHLEY

Q. How can I remove mildew from fabrics?

A. In early stages remove by rubbing into the material a paste of powdered chalk and soapsuds and laying it in the sun. Renew as often as it dries For advanced stages steep the article in a weak solution of chloride of lime for half an hour, and then transfer to a sol-ution of 1 ounce hyposulphite of soda to a gallon of water to check the action of the lime.

Q. How can I keep the sharp

edge on knives?

A. The sharp carving knives should be kept separated from

each other. If kept together they will lose the sharp edge

#### SHE WAS WILLING

A near-sighted publisher, walking along the beach at Provincetown, Massachusetts, encountered a comely young lady who greeted him by name. Unable to recognize her without his glasses, the publisher stammer-ed, "How nice to see you up here. How long are you staying?" "I've got to go home Sunday," she told him sadly. "What a pity," he remarked. "September is the best month on the Cape. Way don't you stay an other week?" "I will if you'l let me," the girl said coyly.

The publisher examined her at close range and suddenly recognized her. It was his pri-

vate secretary.
