**ANNE HIRST**  
*Your Family Counselor*

"Dear Anne Hirst: I am not far from 40, and I'm frightened. Why is it that all my life I've not been able to hold a man? I've tried to be all that is expected of a woman kind, understanding, sympathetic, charming and intelligent. I am contented more than pretty, and I have no difficulty at all in attracting men. But—  
 "Usually it's only about five or six months after an eligible male starts dating me, sparing

**Shoulder-Warmer**

"Then I can only deplore the things I will never have—a husband, a home and children. I am a professional young woman, am certainly should be a more interesting companion than a housewife who can only talk food prices, children, and what new clothes or jewelry she can coax from her husband. . . . Here I wait, hoping the right one will come along before I'm too old to care.  
 "Men only seem to be out for what they get, someone to practice love-making on (as one reader put it) so they'll know how to proceed when their true love arrives.  
 "Do you think there is a destiny that controls our lives? That no matter how desperately one tries to change a situation it is to no avail? That perhaps my particular destiny is never to have what all women want and most of them get—a man of their own?"

**ONE LONELY WOMAN**

\* Fatalists seem to believe that what is to be will be, and are convinced that it is futile to struggle against one's pre-destination. I am not one of those.  
 \* When a woman knows what she wants, I think she should lay her plans to get it. First, to deserve it and prepare for it, then use her ingenuity and common sense to pursue it. Search, successive experiences with the male sex show her what not to do, and if she is honest in admitting mistakes she makes fewer of them. Frank analysis of one's failures is a help, too.  
 \* Many a girl yields to a man's love-making early, shows a too-ferveent eagerness to oblige him. This isn't smart, for he concludes he is not the first male in her life and the idea revolts him. Other young women snub a man with such hostility that he believes her incapacity of emotion. He can, however, be regulated so graciously that she feels he does appeal to her but she has too much self-respect to stoop to conquer.  
 \* Some professional women assume an arrogance that is mathematics to romance. Positive in personality, they cannot discuss any topic without showing how superior they feel. They forget that womanliness, a willingness to listen

no affection (and making vague promises) that the friendship goes haywire. I feel he grows more self-conscious and unable to converse on impersonal topics like world affairs, sports and other subjects that interest men and interest me, too.  
 "Then I can only deplore the things I will never have—a husband, a home and children. I am a professional young woman, am certainly should be a more interesting companion than a housewife who can only talk food prices, children, and what new clothes or jewelry she can coax from her husband. . . . minutes are the two biggest faults which result in a poor cup of Tea. Tea is an aristocrat—it refuses to be rushed—but it proper yet simple attention and it will give you its best.  
 Not so very long ago a Tea taster in the United States disparagingly referred to the inability of many American women to boil water! Whilst his remark was ridiculed, there is some justification for his scathing comment! Did you know for example that boiling water has to reach a temperature of 212 degrees and that the perfect cup of Tea is made only when fresh water has been brought to a furious boiling? If the teapot isn't heated first, even hotter water will stop as many as 20 degrees after it has been poured into the teapot. You do not get the full flavour or aroma from Tea's delicate oils and minerals unless it has been brewed for a full 5 minutes.  
 There's no problem in making a really good cup of Tea. Here are the simple, basic steps which, if followed, will result in a really good cup of Tea. Here are the simple, basic steps which, if followed, will result in a really good cup of Tea. Here are the simple, basic steps which, if followed, will result in a really good cup of Tea.

**See The Water's Really Boiling**

Ask a housewife if she knows how to boil a good cup of Tea and she'll laugh and say, "But you're joking, of course." Ask a restaurateur if he serves a good cup of Tea. Without doubt he will answer in the affirmative. Yet, surprisingly enough, in many restaurants and in some homes, a pale watery liquid masquerades under the name of Tea, although a good cup of Tea is a very refreshing and enjoyable beverage.  
 Using water that has not come to a bubbling boil and being too impatient to let it brew for 5

**Painting Pointers**

A paint roller must be cleaned carefully after use if it is to do a satisfactory job the next time. But cleaning can be a messy business. Here's a tidy and effective method. After using oil paint, squeeze the excess paint out of the roller by rolling it in the empty pan. Then put it in an empty polythene bag—the kind the grocer uses to hold meat. Then you can squeeze the roller by hand, working out the remaining paint. Rinse the roller in a pan of turpentine, mineral spirits or other thinner, repeating until clean. After painting with latex-base paints, clean the roller in lukewarm water.

The best way to mix paint is to use two cans. Pour off the paint and stir the sticky solids in the bottom of the can. Then pour the rest back and forth from one can to the other several times. Keep an extra paint pail in the house for this purpose.  
 Be careful when painting anything which has wax on it. Paint will not adhere to wax and in no time it will peel and chip. Scrape the surface first with soap and water, then give it a good rubbing with turpentine to remove every trace of wax. If any gloss still remains, rub it lightly with fine sandpaper. Be sure the surface is thoroughly dry before you paint.

whole works. What added charm was the fact that one sock was bright blue with red top and the other light grey—they were the only ones in my mending basket that didn't need to be replaced. I had a pair of socks that had been washed in the tub when I was getting the mail from the box.  
 Apart from the ice I had a wonderful time last week. Spent nearly a whole day gathering up old Christmas cards in and around the neighbourhood. I went to work on a whole lot of papers and magazines for the B. B. B. After a while I shall be able to move around at Ginger Farm!

**THE Calvert SPORTS COLUMN**  
 by Elmer Ferguson

André Binette is a hockey goater, though perhaps not a very good one. Also, he is just a little boy; a very little boy indeed, compared to the giants of major hockey. He weighs only 125 pounds. Yet Little André Binette has written into the saga of hockey when he was called on in a sudden emergency by a National Hockey League team.

The night of November 11 Canadiens were drilling in the usual fashion before playing Chicago Black Hawks. Jacques Plante, the hawk-faced "vater" was in the nets, casually batting away the shots his mates were tossing his way. The shots were easy for the swift-moving Plante to handle. Easy, that is, until one streaking drive took a sudden sharp curve and the frozen puck, travelling at bullet speed, crashed into his face. He fell head-foremost onto the ice. His check-bone was shattered by the impact.

Canadiens had two spare goalers. One was out of the city, with Royals' team. The other was down at Providence. So, suddenly, the League leaders found themselves with no goater at all. Then someone recalled that little André Binette, spare net-minder for a junior team, was in the house. Quickly, he was found. He was asked to play: "No," he protested at first, bewildered by it all. "It would not be fair to Canadiens. I am so small."  
 But in the end, he consented to fill the gap as best he could. He was hurried to the dressing-room, equipped with the big pads left behind by the 175-pound Plante, pads which hung almost ludicrously from the little fellow's skimpy frame. He shambled out on the ice, shaking with nervous tension, weighted down by the over-size gear—his own was in a sports shop, being cut down.

Stars and Planets  
 Stars and planets look very much alike, although they are actually entirely different kinds of bodies. Stars are huge balls of extremely hot and glowing gas, like our own sun. Planets are much smaller than most stars and are more or less like the earth, for they have no light or heat of their own. The planets shine brilliantly in the sky simply because they reflect the light of the sun, somewhat as a mirror might. While there are countless trillions of stars, we know definitely of only nine planets, and all of these belong to the sun's family.  
 On a clear night the sky is full of stars. Since the planets are constantly moving around the sun, some of these bodies may be in the night-time sky where we can see them among the stars, and some of them may be in the daytime sky where we can not see them because of the sun's glare. At times when some of the planets are shining among the stars, it may be difficult to know which are planets and which are stars.  
 We have already seen that stars twinkle because their light is bent in various ways by the

**Man Builds Home Beehive-shaped**

A man who has kept bees in New Plymouth, New Zealand, for 34 years has finally built a "beehive" for himself.  
 From his long experience as beekeeper, George Brewster has discovered that bees know what they were doing when they chose the hexagon as a basis for hive construction.  
 And since it was good enough for the bees, it was good enough for Mr. Brewster, "something superior," he said, "to man-made right angles." So he built a beehive of no other shape, using the hexagon as the basis of measurements and design.  
 Hence, Mr. Brewster has come up with something unique in the history of prefabricated construction. The benefits are manifold, he said. For the hexagon, he added, provides greater floor space for relative wall space, greater storage capacity, and far greater strength for the construction unit.  
 It also has the advantage of unlimited variations of design and size from an extremely small number of basic shapes and pieces.  
 Mr. Brewster has reduced the materials used to 18 standard parts which can be factory-cut and mass produced.  
 Many of the parts make use of smaller waste pieces of timber that ordinarily drift from the orthodox construction job into the scrap heap. All the walls have a laminated frame, lined on the inside with hexagonal sections, each built around three diamond shapes and finished on the outside with a sheathing of rough-cut plaster.  
 Mr. Brewster's own house consists of seven equi-sized rooms or units, all opening from a central hall and joined by quantity shaped archways which can be curtailed or fitted with sliding doors.  
 The only discordant note to Mr. Brewster is the rectangular nature of the furniture. He says that he would not bring himself to follow the suggestion to "knock the corners off."  
 Mrs. Brewster, who shares her husband's enthusiasm for this "beehive" style of living, finds their home a joy to keep in order.

**EMPTY POCKETS**—The solution to the problem of how to keep that well-pressed look is in the brief case. John Barbieri, tailor, says that a brief case tailored to match the suit could well take the load usually carried in the average businessman's 10-16 (count 'em) pockets.

**UNDER-NOURISHED**—Nourished under water, that is, Pauline Ady and Barry Blair, framed by a part of their diving tank at an exhibition in London, England, demonstrate that you can have a snack while enjoying the growing sport of skin-diving. Bananas are a made-to-order food for underwater lunch; liquids may be carried in plastic, compressible containers and squirted into the mouth. Spectator is Carol Parr.

**.. PLAIN HORSE SENSE ..**  
 By F. (BOB) VON PILLS  
 A strong plea for a clear-cut agricultural policy was made a few days ago in the House of Commons by F. S. Zaplinsky (member for Dauphin, Man.). Mr. Zaplinsky said that he wanted to repeat the statement that had been made so often by members of all parties "that agriculture is entitled to its fair share of the national income. He said that he was not going to ask for "hand-outs" or "preferred treatment," but wanted to outline a policy which will, as near as it is possible to do so, bring agriculture and its fair share of the national income.
