APPLICATIONS ACCEPTED ADOPTION of CHILDREN 4-16 years old

There are many children from 4 to 16 years of age, who are ready to be adopted. Homes are needed for these children now. Because of their age, religion, racial origin or a physical handicap, homes are not easy to find. Security for these children will come from a permanent home. This program does not apply to infants, since the demand for them far exceeds the number of infants available for adoption.

If you are a married couple interested in applying for the adoption of an older or handicapped child, you should be under the applying for the adoption of an older or handicapped child, you should be under 45 years of age. You must be in good health and financially capable of caring for the child's future. Your personal character, homemaking ability and capacity to meet the needs of a child requiring special care are important factors in the placement of these children.

Applications for adoption of the following children—and other older or handicapped children—should be directed to the Minister of Public Welfare, Parliament Buildings, Toronto, Ontario.

Typical of the children seeking permanent adoption homes:

 A pretty little blonde Protestant girl who is 4 years old. She needs a good home and patient, understanding parents : . . because she is a spastic and must wear a brace on one leg. Fortunately, her chances of someday walking without a brace are promising. But she has to attend a therapy class every week, so she must be in a home near a clinic. This little girl's greatest need now is for love and affection as part of a permanent family.

• Two good-looking brothers who are 8 and 9 years old. They are Roman Catholic, able to

answer then is to produce the right quality if we can hope to increase the consumption. This is entirely possible if we would only go about it in that right way. For instance in the Advanced Registry tests last year 73.2 per cent of all the pigs fed at the stations were in the top grade. They were all self fed and the average feed consumption was 3.6 lbs. of feed per pound of gain. The mixture used was composed of barley, wheat and oats on a 50-20-30 basis and a comparatively simply proteinmineral mixture.
