
We are occasionally accused of practising that human trait so widespread and obvious that the English language has several words for it—talkativeness, garrulity, loquacity, verbosity and others. These accusations seem to be made on those rare occasions when we become involved in social intercourse among friends. Anyone who knows us, of course, will realize this is an unfounded accusation because whenever we try, temporarily, to forget the cares of the world it can be taken for granted we keep our mouth shut.

- - - - - -

It does cause one to wonder, however, what the world would be like if we all closed up like clams. In fact, some distinguished thinkers have praised talkativeness as an instrument of civilization. After all, what is a book, a magazine, a newspaper or a racing form but talk in print? And there are many persons whose occupations force them to talk. Think of the hard working salesman, for example—or the Senator engaged in an arduous filibuster who dare not let words fail him.

The topic of talkativeness was discussed during a session of the McClellan Racket Committee. A couple of the witnesses talked all over the place during their interrogation and when pinned down would finally end up taking the Fifth Amendment. Finally one of the questioning Senators asked the witness, "Could you not stop the superfluity of your conversation and give us some information" And, ten minutes later, the same Senator said, "If I may borrow some words from John L. Lewis, 'I am afraid you have become inebriated on your own verbosity.'"

The witness replied: "I thought the expression originated with Sam Johnson, and it was "Intoxicated with a person's own exuberance."

- - - - - -

They were both wrong, of course, because the phrasing they were searching for came from the lips of that great Tory Prime Minister, Benjamin Disraeli, who, when he was seventy-three years old, described his famous rival, William Gladstone, as "a sophistical rhetorician, inebriated with the exuberance of his own verbosity, and gifted with an egotistical imagination that can at all times command an interminable and consistent series of arguments to malign an opponent and to glorify himself."

- - - - - -

This brings us back to the accusations that have been directed toward us. Doc Austin has been making these charges for several years past but we never pay any attention to his observations. The question of guilt in this regard has now been suggested from another source so we have had to give the matter some careful consideration. Our conclusions, thus far, lead us to believe it is better to be considered intoxicated by an attempt at loquacity than to leave the impression the chassis is just a souped up job without a motor to run it.

—O—

GARDENING GUIDE

Dry atmosphere is often one of the chief factors responsible for failure in growing house plants, according to horticulturists with the Ontario Department of Agriculture

Cacti require re-potting only every two or three years, according to horticulturists with the Ontario Department of Agriculture.

Keep ferns out of draughts, advise horticulture specialists with the Ontario Department of Agriculture.

Some dwarf ivies are not good climbers but thrive as trailers or creepers, according to Ontario Department of Agriculture horticulturists.

Horticulturists with the Ontario Department of Agriculture say that if the bloom is cut off Easter Lilies after they flower and the bulbs are planted outdoors when the danger of frost is over, they may bloom again in the fall and sometimes will winter over, if protected.

IN THE ORBIT OF OUR EYE!

By C. D. CLARKE

YOU CAN GET USED TO POISON!

By poison I refer to anything that kills "that by which we live!" We live in air, we need it. Yet, those things we enjoy most, and therefore take for granted, we do every thing we can to see to it that we pollute the stuff. And we seem to do it unconsciously. Just the other day I got behind one of those oil burning buses. The fumes came into the car and I was choking and dropping back for breathing space.

Yet the urge was there to "step on it" and pass the foul monster, even if I had to get that car up to 60 to do it. How many times has this happened to you? I believe it is the cause of many a real accident. Some people would speed up their car, eyes watering and mouth gasping, doing anything they could to get past this common menace of the road!

How many times have you run your car down the highway to Hamilton. As you pause on the highway just above the city, you must have noticed the smoky haze that lays like a blanket over home and factory alike When the wind shifts, that great haze of grassy air moves like a poison gas attack, right over your homes and mine. Yet we do nothing about it!

We have set up commissions to eliminate foul air. We insist on factories having filters in their firing systems, coal fires are fewer, but still, on an increasing basis, we have fouler and fouler air. And it will go on increasing, unless we keep in mind that one important thing—"It is poison to us and ours! And, we can eliminate it!"

Recently in Life magazine, I saw pictures of the lungs of a deceased city dweller and a county farmer. The farmers' were clear and bright. Those of the city dweller looked as though they had been tarred with black paint What the insides of our lungs must be like with all the fumes from these modern buses and oil burners, I do not know. How long can we take this sort of thing and not do something real drastic about it?

Just look at the way the paint on our homes weathers from the acids in the air. Stone and iron crumble in the cities. Now we have the gasses of the city attacking us right in the country. And we aren't made of stone or iron.

No wonder the city folks rush out into the country for a bit of fresh air. But they bring that old oil burner with them. The haze of gas fumes hangs over our modern highways like an ever present cloud. A cloud laden with poison.

Children need pure air more than adults. Yet in our modern town planning, playgrounds and parks are yield to the "earthy-grey pallor" of half dead beings! Perhaps we will all eventually turn green!

Has everyone forgotten the value of pure air?

It's so easy for us to let go those things we should cherish, were they not so common. Let's talk "pure air" with everyone we meet today! Let's do something about protecting our air!

Tomorrow will, as we all know when we think about it, "be too late!"

ON THE FARM FRONT

Brief Notes for the Busy Farmer

By Haldimand Harry

Last week this column gave some information regarding the consumption of meat in Canada for the year 1958. DBS figures for 1959 have just been issued and the total per cap ita consumption of all meats not including poultry went up by 5.3 lbs. It has been reported that this was primarily due to a rather significant increase of 6.7 pounds in pork consumption this past year. The total consumption of all the red meats in 1959 stands at 143.3 pounds per person.

-oOo-

The forecast of hog marketings for the April to June quarter of 1960 have been estimated to be 141,500 head per week or 14 per cent below a year ago It has been anticipated that the run for the third quarter of the year will be 115,400 head per week based on a 26 per cent decrease from the same period of 1959. Incidentally, 170,370 Canadian hog producers had registered under the government deficiency plan as of March 25th, and applications were being received at the rate of about 1,000 per week. According to the 1956 census, pigs were being kept on 287,357 farms across the Dominion.

-oOo-

More about hogs! Haldimand hog producers marketed 3,753 head during the month of March with 1,342 of the hogs falling in the "A" grade. This is 35.75 per cent and the highest percentage of any month for some considerable time. If Haldimand producers can continue at this upward trend the county may eventually regain its position in the hog production business. The March 1,753 head or 46.70 per cent in the "B" or second grade The number of sows sent to market was the same as for the month of January, namely 115.

-oOo-

Someone has recently pointed out that man was provided with eyes which were meant to give him proper vision while moving at the rate of three to five miles per hour. Under modern day conditions we are expected to have the same depth of perception and reaction from our eyes when travelling at speeds up to even seventy-five miles per hour. This is another reason for being constantly on the alert at all times when either walking or driving on the roads and streets.

-oOo-

Someone has also come up with this little safety tip. It seems if you take half of the speed at which the car or vehicle is travelling and add to this the actual speed it is going, the total becomes the number of feet the car will be travelling in a single second. Under such conditions a car travelling at sixty miles per hour is actually covering ninety feet every second. At thirty-two miles per hour the same car would travel at the rate of forty-eight feet per second. This will tend to further emphasize the need for having every part of the car in perfect condition and ready to meet any situation.

-oOo-

Haldimand farmers should not forget the value of corn either as a grain crop or as a silage crop. There is no quarrel with the use of grass as a silage crop and where this can be used and the operator has the necessary experience and "know how" to handle it, grass and legumes can be very valuable when used in the form of silage. On the other hand corn still provides a most palatable and digestible feed when stored as silage. It might be better to point out that silage, either corn or grass-legume should be more widely used on the average Haldimand farm. The economical production of milk and beef is highly important these days and there is no cheaper form of feed than silage when properly handled and produced.

-oOo-

Four special Live Stock Days have been arranged at the Ontario Agricultural College to be held during the week of May 30th. The first of these, Dairy Cattle Day, will start the week off on Monday, May 30th with Dr. W. E. Peterson of the University of Minnesota as the special guest speaker. Dr. Peterson is no stranger to Ontario and those who have heard him before will want to hear him again when he speaks on the subject entitled "Immune Milk and Dairying". The Sheep Field Day is scheduled for Wednesday, June 1st, to be followed by the Beef Cattle Day on Thursday, June 2nd and the Swine Day on Friday, June 3rd. There is a cordial invitation extended to all interested parties. Lunch will be available in the College Dining Room.

-oOo-

Soil testing should be looked on as the "private eye" of the farmer to see what is going on in the soil and to alert him, farmer, should anything unusual take place. Certainly the farmer should be aware of the condition of his soil and he should take the necessary steps to correct any weak spots in his fertility program. Through the use of the new soil testing system now in vogue at the Ontario Agricultural College, it is possible to make recommendations that will feed the crop to which the field is being devoted. The testing of the soil is still taking place at the College but the recommendations for Haldimand farms based on the results of the tests are now being made in the office of the agricultural representative for Haldimand County.

-oOo-

Meat consumption in Canada for the year 1958 (the last year for which data is available) showed a reduction of 2.3 pounds per person. The greatest drop was in beef amounting to 10 pounds. Pork was up 5.6 pounds and poultry was up 2.1 pounds. This information is provided by the Canada Department of Agriculture. During 1959, the inspected slaughterings of cattle were down 8 per cent while calf slaughterings were down 14 per cent. On the other hand sheep and lambs were up 4 per cent.

-oOo-

Closely associated with incorporation is the question of establishing a father-son agreement on the farm. This is a most important step on any farm particularly where the son is planning to get started and finds it difficult because of the need for large capital expenditures which he may not have. A partnership with the details put down in writing is the first step toward an amicable arrangement which will protect both the father and the son. There is a bulletin on this as well and included is a suggested type of agreement. To have it properly drawn up, a trip to the lawyer is advisable.

—o—

There seems to be quite a variation in the need for salt in the dairy herd. For that reason it is always wise to permit free choice of this ingredient. Hand feeding and the mixing of salt in the ration may not give some cows enough and still others may get too much. What holds true for the milking herd may also be true in the case of the younger cattle. In any case it is wise to supplement any salt fed in the ration by placing additional supplies where the cattle can help themselves.

-oOo-

Have you been having trouble with your butterfat tests? Perhaps you would be interested in getting a copy of the new circular on factors influencing these tests. It has just recently come out and lists 27 different factors that will influence the butter fat content of a cow's milk. Some of these are obvious, others are not quite so evident. For instance, weather is given as one of the 27. It seems that tests are higher in cold weather and lower when it is warmer. A copy of this circular can be had on application to your agricultural representative.

-oOo-

It would appear from the latest forecasts that hog marketings during the first quarter of 1960 will likely be down about 30,000 head or 17 per cent per week. It is anticipated that marketings in the West will be down about 20 per cent and in the East they will be about 14 per cent lower. The average weekly marketings across Canada are expected to be in the neighbourhood of 143,100 per week during the first three months of this year. A further reduction is expected in the second quarter and during the last half of the year production will have levelled off at around 115,400 head per week if present indications carry through.

-oOo-

In this connection, Haldimand producers sent 3306 hogs to the killing plant during January. This is somewhat lower than might have been expected with the heavy runs during the first week. A total of 1060 hogs were in the top or "A" grade bracket. This is 32.06 per cent whereas 40.40 per cent, 13.23 per cent and 13.33 per cent were in the "C" grade. One hundred and fifteen sows went to market from Haldimand last month.

-oOo-

Strange as it may seem, one of the big complaints being received these days is the low quality of the milk going to market. As far as can be learned it would appear to be a case of the producer feeling that because it is winter the milk does not have to be cooled. This is certainly not the case as the quality of the milk must be removed from the product the better. This applies in winter just the same as in the warmer weather of summer. So, just because the temperature is cold outside, do not neglect the use of the milk cooler. The real reason for removing the animal heat is to keep the bacterial count down and recent reports would lead one to believe that bacterial counts are higher at this time of year than during the summer.

-oOo-

Final figures on butter production during 1959 have just come in and for the first time in many years production for the year is down from the previous year in Haldimand Sudbury. For the twelve months ending with December the production was 3,330,000 pounds as compared with 3,756,000 pounds for 1958. Production for December was about 30,000 pounds below the figure for the same month in 1958. In a somewhat similar manner, production across the province is down by 2.9 per cent for the year although up 1.5 per cent for the month of December.

-oOo-

Did you get your copy of the 1959 Progress Report of the Haldimand Soil Improvement Committee? The first run of 250 copies was quickly picked up but a re-run has been made and there will soon be a plentiful supply. This year's edition has been entitled "Haldimand's Willing Acres Respond to Nitrogen" and puts emphasis on the remarkable results that have been obtained through the use of nitrogen on the heavy clay soils of the county. The report this year also gives a rather complete summary of the work that has been done by the committee during the past several years Be sure to get a copy. They are free to residents of Haldimand County.

-oOo-

The new issue of the Ontario Farm Account Book Guide has just come out and while similar to previous editions, it does contain some newer information Any farmer who has recently picked up a copy of the Ontario Farm Account Book and who would like to secure a copy of "The Guide" can get one at the office of the agricultural representative or by dropping a card to the office. What the Guide really does is to give information on how to make the best possible use of the Account Book. It tells how to make an inventory, how to make entries in the book and answers many questions that frequently come up with regard to keeping accounts.

-oOo-

"Use the strip cup regularly" is good advice for the dairyman one of the best methods of on the udder health of the cows in the herd. Don't let the little bit of milk that is the part of the milk with its bacterial count and the least butterfat of any milk Furthermore the these squirts of milk seal at the end of each test and the milking system to the extent that other milk down more freely.

-oOo-

As a convenience to the Haldimand County and in to those who want to take plea, the Haldimand Soil ment Committee has arrangity supply of soil sampling tu put at the Department of ture Office in Cayuga, for sale to the public at a onable price with the balan cost being absorbed by the co So far the sale has been vag aging and it would appear a this tool is filling a need in ty. If you are interested pick one up the next time you the vicinity of the county to

The total poultry population the Dominion dropped slig cent between December 1 the same date in 1959. Ontario ty population went down by cent during the same peri chen utensils The increase the country. Only two provinces ect any increase—Nova Scotia British Columbia. The most portion of the drop seems b been in younger fowl. The of the older birds was higher but three provinces—Ontario katchewan and Alberta.

-oOo-

As the cropping season is open for 1960, let us resolve to a safe season. Did you know when the speed of a tractor is led, the danger of tipping is been multiplied by four? The the speed means nine times ping hazard. Extreme caution be observed when travelling a tractor on the highway. In collision between cars and the driver of the tractor is likely to be killed. In fact, state across the line, recognizing the hazard driven out every one car driver that did tractor collisions.

-oOo-

Certain changes have been in the D.H.I.A. regulations are becoming effective immediately. For one thing, member must own a grade or herd to be eligible for the For the purpose of the policy herd shall consist of pure and grades of which with 80 per cent being pure bred. bership under the policy will mined automatically if the production of the herd over year period falls below 80 per cent when weed control problems are solved.

RENTON

Several members of the Renton W. I. attended the Tweedsmuir Tea held at the museum in Simcoe on Friday afternoon

Mrs. Hugh Mitchell entertained a number of ladies at a Stanley party at her home on Thursday afternoon.

The South Norfolk Calf Club held its May meeting at the home of Mr. Chas. Mitchell and son on Tuesday night.

The May Meeting of the Renton W. I. will be held at the home of Mrs. Wiersma.

—O—

COYMA CLUB MEET

The April meeting was held at the home of Mrs. Wm. Evans with eleven members and Rev. Brueton present.

The President opened the meeting with hymn 267 followed by prayer and scripture reading by Mrs. H. Snowden of psalm 37. The roll call, "A Verse of the Bible," was answered by 11 and get well and sympathy cards handed in to the secretary. The minutes were read by Mrs. William Snowden and also the treasurer's report. A committee of Mrs. Elmo Field, Mrs Stan Tomkins, Mrs. Hubert Field and Mrs. Blake Field were appointed to look after buying material for a new Fair Linen Altar Cloth.

The Club is catering to a banquet May 26th, with the committee of Mrs. Wm. Snowden, Mrs. Stan Tomkins and Mrs. R. Weaver in charge of arrangements. Mrs. Elmo Field was asked to buy a gift for Mrs. Don Ross, a patient in the hospital.

Mrs. Russell Weaver will look after the purchase of a dozen roll baskets.

The roll call for the May meeting, at the home of Mrs. Elmo Field, "A Safety Hint in the home" and fifty cents collection for purchase of kitchen utensils.

The singing of hymn 38 and the Benediction by Mr. Brueton brought the meeting to a close, after which refreshments and a social hour followed.

—O—

LAMB'S CORNERS 4-H CLUB

The 8th and final meeting of the Lamb's Corners Cotton Clippers was held at the home of Lynda Kitchen on April 27th. The meeting was opened with "O Canada", the 4-H Pledge and the minutes of the last meeting. Roll Call was for each girl to show a sample of the bound buttonhole. Fourteen were present. The main topic of the meeting was our plans for Achievement Day, which is to be held at Kohler on May 28th.

We were shown how to judge a dress and dress material and also how to prepare the dress for Achievement Day.

For group work we sewed on buttons, learned how to cover a belt and how to make a band belt keeper.

We are to complete our dresses and record books for May 16th.

We concluded the meeting with "God Save The Queen" and lunch.

SPRING-SOWN LAWN GIVES GOOD RESULTS

Probably more new lawns are sown in spring than at any other season, despite the fact that the best time for judges are not open to influence. She said that Canadian Courts were held in high regard abroad.

She explained how the Province of Ontario was divided into Judicial Districts for judicial purposes and that the County District covered six Counties, Brant, Norfolk, Haldimand, Welland, Lincoln and Wentworth, with ten Judges, all of whom had concurrent jurisdiction throughout the whole District.

She pointed out that a County Judge's duties extend far beyond presiding in County Civil and Criminal Courts and mentioned some of the numerous more or more special duties required by Statute such as presiding over Citizenship Courts, dealing with Assessment appeals, being Chairman of the Eelction Board in Provincial Elections, being Chairman of the Board of Selectors of Jurors and conducting civil marriages.

She deplored the tendency of women to take advantage of their special right to avoid jury duty, pointing out that it was an interesting and instructive experience to take part in the administration of justice in that way.

She said that County Judges on their appointment were also made Local Judges of the High Court of Justice and Surrogate Court Judges as well and that much of their work was done in Chambers and not in the Court room.

She interspersed her instructive remarks with humorous situations that arise in connection with the work of Judges.

Mrs. Ken Morton of Willow Grove thanked Miss Kinnear and presented her with a planter and daffodils. Mrs. Reg. Ridley of Caledonia thanked the woomoen for their cooperation and interest. Miss Carol Watson played a selection on her accordian. "Star Dust." Mrs. Harvey expressed her thanks to Judge Kinnear and to all who had made our Luncheon another success.

Port Lambton, Ont. (CP)—Two Chatam men rescued a wild duck here recently. Wounded in one wing by an out-of-season hunter, the duck was trapped with the injured wing frozen to the ice on which it fell.

—O—

One of the real reasons for D.H.I.A. or R.O.P. work to be done is to assist the owner in the gradual and effective elimination of low producers in the herd. If no effort is done to follow this through or if the low producers are culled out and no replacements are secured to take their place, the whole effort has gone for naught. It is important in purchasing replacements that great care be taken to get the best that can be bought with the money that is available. Certainly there is nothing to be gained by replacing 7,000 pound cows with 7,000 pound cows. The aim should be to replace 7,000 and 8,000 pound cows with 12,000 pound cows. You will be surprised with the results.

ANNUAL DAFFODIL LUNCHEON HELD AT KOHLER

(Intended for last issue)

The 5th Annual Daffodil Luncheon sponsored by the Women's Committee of the Haldimand County Federation of Agriculture was held at the Rural Youth Centre, Kohler on April 22nd.

Mrs. Clarence Harvey, acting as Chairman, welcomed one hundred and fifteen ladies in the absence of the Chairman Mrs. Russell Hare, who was absent due to illness. Mrs. Elson Smith, Secretary of the Women's Committee introduced the head table guests, Mrs. Lorne Stringer, President East Haldimand Women's Institutes, Mrs. Alfred Marr, President of West Haldimand Women's Institutes, Mrs. Gordon McMorron, Mrs. John Farrell, Mrs. Sandra Taylor, Home Economist, Mrs. Walker Hedley, Treasurer, Haldimand Federation of Agriculture, Mrs. Wm. Creighton, wife of the President of the Haldimand Federation of Agriculture, Miss Jennie Kinnear, Mrs. A. Gordon Skinner, wife of the Agricultural Representative, Mrs. Lloyd Strachan, wife of the Assistant Agricultural Representative and our special guest Her Honour Judge Helen Kinnear.

Mrs. Fred Wilson, member of the Women's Committee thanked the Little Erie Sewing Circle ladies for the luncheon on behalf of those present. Mrs. Lorne Stringer and Mrs. Alfred Marr brought greetings from the Institutes.

Mrs. John Farrell gave a report on the work of the Women's Committee of the Federation of Agriculture. She reported on the three projects, the Daffodil Luncheon, the 4th Annual Poster Contest for Public Schools which are to be displayed at the Farmers' Picnic on June 9th 1960, and the booth at the Farmers' Picnic.

Mrs. Winger and Mrs. McKeen of Spring Creek favoured us with two lovely solos. Miss Sue Comfort gave two readings, "It Couldn't Be Done" and "The Life You've Lived Today". Mrs. Walker Hedley introduced the guest speaker Judge Helen Kinnear.

Judge Kinnear paid high tribute to the Haldimand Federation of Agriculture and its junior groups. She described the Junior Farmers and the Junior Women's Institute as the finest groups of young people you could find anywhere.

The Judge chose as her subject, "The Role of the County Judge". She explained that County Judges were appointed by the Federal Government for what was virtually a life tenure and lost their right to vote on appointment. She pointed out that both security of tenure of office and disassociation with politics were considered necessary to make it perfectly clear to the world at large that judges are not open to influence. She said that Canadian Courts were held in high regard abroad.

She explained how the Province of Ontario was divided into Judicial Districts for judicial purposes and that the County District covered six Counties, Brant, Norfolk, Haldimand, Welland, Lincoln and Wentworth, with ten Judges, all of whom had concurrent jurisdiction throughout the whole District.

She pointed out that a County Judge's duties extend far beyond presiding in County Civil and Criminal Courts and mentioned some of the numerous more or more special duties required by Statute such as presiding over Citizenship Courts, dealing with Assessment appeals, being Chairman of the Eelction Board in Provincial Elections, being Chairman of the Board of Selectors of Jurors and conducting civil marriages.

She deplored the tendency of women to take advantage of their special right to avoid jury duty, pointing out that it was an interesting and instructive experience to take part in the administration of justice in that way.

She said that County Judges on their appointment were also made Local Judges of the High Court of Justice and Surrogate Court Judges as well and that much of their work was done in Chambers and not in the Court room.

She interspersed her instructive remarks with humorous situations that arise in connection with the work of Judges.

Mrs. McMorron of Willow Grove thanked Miss Kinnear and presented her with a planter and daffodils. Mrs. Reg. Ridley of Caledonia thanked the woomoen for their cooperation and interest. Miss Carol Watson played a selection on her accordian. "Star Dust." Mrs. Harvey expressed her thanks to Judge Kinnear and to all who had made our Luncheon another success.

Port Lambton, Ont. (CP)—Two Chatam men rescued a wild duck here recently. Wounded in one wing by an out-of-season hunter, the duck was trapped with the injured wing frozen to the ice on which it fell.

—O—

One of the real reasons for D.H.I.A. or R.O.P. work to be done is to assist the owner in the gradual and effective elimination of low producers in the herd. If no effort is done to follow this through or if the low producers are culled out and no replacements are secured to take their place, the whole effort has gone for naught. It is important in purchasing replacements that great care be taken to get the best that can be bought with the money that is available. Certainly there is nothing to be gained by replacing 7,000 pound cows with 7,000 pound cows. The aim should be to replace 7,000 and 8,000 pound cows with 12,000 pound cows. You will be surprised with the results.

NOTICE

BY-LAW No. 211
OF THE VILLAGE OF JARVIS
GOVERNING THE SALE AND SETTING OFF OF FIRECRACKERS, ETC. WITHIN THE VILLAGE OF JARVIS

ENACTS AS FOLLOWS:

No person shall fire or explode any squibs, rockets, crackers, Roman candles or other combustible fire works in any public building, lane, alley or sidewalk or other public place within the boundaries of the Village of Jarvis, unless granted permission by the Jarvis Village Council.

No retail merchant or any other person shall sell any fire crackers, Roman candles or any combustible fire works to any person under the age of Twenty-one years in the said Village of Jarvis.

Any person who violates any of the provisions of this By-Law shall be liable for the first offence to a penalty of not less than $5.00 and not more than $15.00 and for any subsequent offence to a penalty of not less than $10.00 and not more than $25.00.

THIS BY-LAW WILL BE STRICTLY ENFORCED

The Village of Jarvis,
DAVID McBRIDE, Reeve

FATHER REGINALD O'DONNELL MEMBER OF ROYAL SOCIETY OF CANADA

Father Reginald O'Donnell, CSB, PhD, professor of paleography in Pontifical Institute of Mediaeval Studies of St. Michael's College, Toronto, has been elected a member of the Royal Society of Canada, a distinction among Canadian scholars which he has earned by his research papers and projects, and his critical editions of mediaeval texts.

Born at Jarvis, Ontario, Father O'Donnell made his undergraduate course in St. Michael's College, graduating from the University of Toronto in 1931 with distinction. Electing Latin literature and paleography for his field of graduate training, he made preliminary studies at Cracow and Breslau, and completed them in Paris, subsequently returning to the University of Toronto for his doctorate. He has been professor at the Institute for the past 24 years.

Co-incident with his recognition by the Royal Society, came the award of a Senior Fellowship by the Canada Council, which will enable Father O'Donnell to spend a year in Europe investigating mediaeval documents, and preparing for publication a critical edition of a mediaeval philosophical work Sapientiale, by Thomas of York, an English Franciscan of the 13th Century.

PAST NOBLE GRANDS CLUB MEETING

The Past Nobles Grands Club held their meeting on Thursday afternoon at the home of the President, Mrs. Eileen Durant, with a good attendance of members. The President opened with an appropriate verse, the singing of "Blest Be The Tie" and repeating the Lord's Prayer in unison. Mrs. Butts read the Scripture lesson. The minutes were read and adopted and the treasurer's report was very good for closing the year. It was decided to donate $10.00 to the Community Chest Fund. The election of officers for 1960 was as follows: President—Mrs. Eileen Durant;1st Vice-President—Mrs. Flora Prize was drawn by Mrs. Florence Banks. The meeting closed with singing "The Queen", and a delicious lunch was served by the hostess and her helpers.

HUNDRED BUSHEL CORN COMPETITION TO CONTINUE IN 1960

For the third year the Dunnville Board of Trade is co-operating with the Haldimand Soil and Crop Improvement Association in sponsoring a 100 Bushel Corn Coompetition in 1960, and it is hoped that membership in the competition will be greatly increased this year with the emphasis being placed on the competition by the Dunnville Board of Trade this year.

The Kneider Challenge Trophy will be competed for the first time this year. This very beautiful trophy, emblematic of being crowned the Corn King of Haldimand, is being provided by Kneider Brothers of Dunnville and will be a part of the 1st prize. The winner will receive a suitable award which will become his permanent property in addition to other awards.

The purpose of the competition is to encourage the use of seed corn varieties suitable for the soil and climatic conditions to be found in Haldimand County as well as to encourage better weed control, the use of higher fertility levels and the following of improved cropping and cultural practices. All contestants will receive complimentary tickets to the Annual Meeting and Banquet of the Haldimand Soil and Crop Improvement Association to be held in January 1961.

A meeting to be addressed by corn specialists will be held in the show rooms of Robert Cowan & Sons on Friday evening, April 29th. On this occasion plans for the competition will be discussed fully and details of the regulations given. The meeting is called for 8.30 P.M. All farmers are invited to attend.

TIMELY TIPS

Keep cows away from new pastures for two hours before milking, advises Agricultural Representative Gordon Skinner. Early pastures have a lot of weeds, many of which are taller than the grasses or legumes. Result: the cows feed on too many weeds and the milk gets objectionable flavours. Pastures aren't safe for full-time grazing until the grasses and legumes are at least 6 inches high.

• • •

Don't use heptachlor on turnips for export; don't use heptachlor on carrots. So warns Harold Goble, Ontario Department of Agriculture entomologist. Reasons: the U.S. has banned heptachlor-treated products; and about one-sixth of Ontario's turnip crop is exported to the U.S. Heptachlor in carrots breaks down and forms a by-product which might be dangerous, says Goble.
