He Spent Ten Weeks In Purgatory!

For very good reasons of their own, early explorers of Alaska gave to the spot where Birch Creek enters the Yukon River the name Purgatory.

But for William C. Waters it was the spot, or so he thought, that would make all the difference between survival and death. For ten desperate weeks, alone and lost in the sub-Arctic wilds, he tried to find it. Last week, after his rescue-and after he had lost 78 of his normal manage a feeble joke: "The trouble was I was going through going backward."

Authorities at Fairbanks had long since decided that Waters must be dead. His abandoned car had been found in late June on the Steese Highway close to its northern end at Circle, 120 miles from Fairbanks. On the front seat was a booklet, "How to Camp Out." A month later, on July 21, a coroner's jury was summoned to make a finding of presumptive death. But the jurors thought there might just be a chance - however slim that Waters was still alive. They declined to authorize a death

The jurors were right. At the very moment of their delibera-tions, Bill Waters was working his painful way along the edge f Birch Creek. He had already and rose hips (the fruit of the wild rose). He was to live on the same diet for another five

weeks before rescue came. He had planned it as the vacation of his life-"I always wanted to see that Alcan Highway.' So Waters, a 42-year-old bachelor from Erlanger, Ky., who works as a railway mail clerk on the Cincinnati to Chattanooga run, set out in early June for Alaska. He made Fairbanks with no trouble, then pushed on Circle, the northernmost point

A few miles from Circle, he knew, was Big Lake, where he nad heard there was good fishing. He left his car, and his "Hew to Camp Out" booklet, ough the muskeg for Big Lake. He had a fishing rod, a tackle box, a machete, a hunting knife, and eleven matches. At Big Lake, he caught a pike had made rough walking, he decided to try a different way back. "I didn't have a map," he

sighed later. "That was the stupidity of it." He never did find his way back. All he could do was follow Birch Creek, which he figured would run into the Yukon and then to civilization. But Birch Creek runs parallel to the Yukon for a good 100 miles before the two join. And Bill Waters, day after day, pushed through the thick growths of willows on the banks of Birch Creek. At one point, he tried to build a raft, but gave up. His

hardly walk. He lost track of time. "I couldn't believe it when they told me I had been gone more than two months."
Two hunters, a man and woman from Fairbanks, found him. Maddeningly. Waters had been unable to attract their attention the first time their outboard motorboat went past. His swollen feet wouldn't carry him i within shouting distance - and he couldn't shout very loudly, the bank. Twenty-four hour later, the boat came past again -and this time the gaunt, beard-

ed figure was sighted. From his bed in a Fairbanks hospital, where doctors said he would recover, Waters couldn't believe he had been saved. "I didn't think anyone would look for me," he said. "I'm just a postal clerk." — From NEWS-WEEK

This Town Adopted A Whole Family

After almost twenty years of homeless, weary wandering a Polish refugee couple and their family have reached journey's end. They are moving into a brand-new house, fully furnished, with food in the larder and flowers in the garden, at Wing-ham, in New South Wales.

More than a year ago the people of Wingham (pop. 2,030) decided that they would like to give a home to a European refugee family who, in the normal way, could not migrate. They chose Mr. and Mrs. Mar-

cin Reczniarek, who, with their three children, had lived almost twenty years in refugee camps, with little chance of leaving because Mr. Recznigrek had contracted tuberculosis.

While he was being treated in Europe, the people of Wingham

and its surrounding district built a house and completely furnish-Recently the family, with Mr. Reczniarek's health restored, arrived in Sydney. They were me at the wharf by the Town Clerk Wingham who pressed into

and a great number of ancient automobiles. The outstanding feature of all this machinery was the fact that it was all in good working order - so much so that every mobile vehicle displayed was included in each of the several parades each day, including the parade on Saturday which passed through the entire business section of the town. Every so often one or other of the steam engines, would let off a blast from its whistle answered by a toot-toot from an an-

road today.

Cars? Oh yes, there were any

tor - the latter acquired just ecently, and which he drove proudly in the parade. There was also an exhibit of on-mobile farm machinery gas engines at one time used for pumping water; wooden rakes and forks for use with horses or oxen and even a dog-treadmill

for drawing water. In another hall there was a of every description - furniture. kitchen equipment, churns, pottery, glassware, musical boxes, model steam engines, high wheel bicycle, also a "bicycle built for two". In fact there was just about everything you ever heard of. And some of the things were for sale, I hurried along when I saw the "for sale" notice or I might have come home loaded!

All in all it was a marvellous exhibit and demonstration of old ime machinery and equipment and we are glad it is planned to e an annual affair. (Watch for the date next year, folks, it is well worth going many miles to see.) Too soon we forget the hard work and ingenuity that was necessary before our forefathers could wrest a living from the soil. They left us a tremendous heritage, one that all too often is not appreciated as it should be. Canada is making great strides today but let us not forget that it was the pioneers who made our present

progress possible. Of course, as a family, we all turned out in full force to see everything we could at the Reunion. No, that isn't quite true as Dee and her family are still at the cottage. Bob was busy all the time; Partner was roaming the grounds; Joy and I and the two little fellows were on the grandstand. When Ross caught sight of his father in the par-ade he yelled and jumped around so much he almost brought the grandstand down. He wasn't so nappy when the clowns came by. found their faces not funny but frightening. I doubt if he had 200 designs in our new, 1962 ever seen a clown before. I have promised to make him a clown outfit so he will understand it is all make-believe. Ross has such a terrific imagination that to him everything is real broider, quilt. Only Wind Your Car Every Three Miles!

tion manual of my new car makes me nostalgic. The new car smell brings back old times. I look again at the first volume of "The Horseless Age," 1895-6. It opens with a full page advertisement of "Daimler Motor Company's factory and offices, Steinway, Long Island City, N.Y., where the celebrated Daimler fotors, operated by either Gas, Gasoline or Kerosene are manu-

factured." Picture captions announced that "The Daimler motor carriages were awarded the following prizes, grand prize 5,000 francs at Paris, July 1894; a gold medal and first prize at Turin, May, 1895; 3 first prizes of 40,-000 francs, as well as the sec third, and fourth prizes at Paris, June, 1895." Below: "The Daimer Motor is the most powerful and compact as well as reliable Engine now on the Market."

The magazine began as a monthly "published in the interests of the motor vehicle indusry," subscription two dollars; single copies 25 cents. Its opening editorial says some may think such a magazine premature but it argues that "a giant industry is struggling into be-

Gottfried Daimler of Cannstatt, Germany, it notes a little later, started things off when in 1888 he invented a "new pe-

troleum motor." Issue No. 1 is chiefly a compilation of all sorts of self-propelled machines — gasoline, kerosene, steam, and even the "spring motor quadricycle," showing a sedate and full-beardded gentleman at the tiller of a machine where "four powerful springs furnish the propelling force." These are said to "make rapid headway on a level road" though it is agreed that "the springs are scarcely strong enough to make a long run on one winding." The owner "hopes to be able to run it at 20 miles an hour and cover three miles

on one winding." A traffic-stopper if ever we saw one, turn that driver loose down Broadway in his quadricycle! Early issues of the magazine

show nervousness over nomen-clature; what should they call the new machine? "Horseless carriage" didn't seem quite right; readers should please coin expressions and write in. The January, 1896, issue announced that Barnum and Bailey's "Greatest Show on Earth" s to exhibit "a Duryea motor

wagon through the country next In the motor carriage races at Narragansett Park, Providence, Sept. 7, 1896, the electric carriages won, writes Richard L Strout in the Christian Science

Monitor. The January 1897, editorial quotes Marcel Desprez, member of the French Institute, before the Automobile Club of France: "The learned gentleman is haunt-ed by the fear that if this fuel comes into general use for ve-hicle propulsion we shall sooner or later be brought face to face with an oil famine, because only 8,000,000 tons of oil are annually taken from the earth while 400,000,000 tons of coal are an-

nually mined." April 5, 1899 — "The proposed bill to license motormen in this country is an imitative measure from French precedents. It is false to our institution, detrimental to the citizen whose freedom it curtails, an impediment to a pages of patterns in our na Color Catalog. was 98.

Halfway through the bruising pro football game between the Oilers last October, Howard Glenn, a 245-pound guard for the Titans, suddenly looked and act-ed singularly tired. The 24played smart, hard ball; but just sent to the locker room to rest. He lay down for a bit; got up he had a broken neck.

injury, and the autopsy showed Broken necks have been considered a risk, but a remote one, in football. But since 1947 the proportion of injuries and fatal-ities blamed on damage to neck vertebras, even among stocky players, has risen each year. In the Journal of the American Medical Association two neurosurgeons and two coaches from the University of Michigan put the blame for this increase squarely on a device which is supposed to protect football play-ers: The tough plastic helmet, with its face guard projecting 3½ inches in front of a player's

nose, which has come into widespread use in the past decade.
Drs. Richard Schneider and
Edward Reifel and athletic director Fritz Crisler and former coach Bennie Oosterbaan first suspected the helmet when a Michigan lineman suffered a severe neck injury during a 1960 game. Movies showed that on one of the boy's tackles, an opponent's knee had hit the vic-tim's face-bar, snapping his head back so sharply that the edge of of departure, but this is ofLater they rechecked on fourteen deaths from head and spinal injuries during the 1959 season out of a total of eighteen deaths, and found that six could be
