This is important if true. wish Pat had known that, it might have spared him some rotating. When the vagaries of uman nature come up against facts of pure science, we do get into binds, don't we?

I was interested in reading, or instance, that you can't find water with a forked stick, the way Edgar Youland does, because it won't work. All these people who are drinking good water that Edgar found with a forked stick are mistaken. Edgar keeps on doing it, but it can't

I remember some years ago the subject of old-fashioned paint came up, and a simple explanadow with the experts that went on quite a time. It seems that oil and water don't mix, and I have heard it stated frequently timers, thus, to have any paint.

In the early days of our pion-

eers, they made their own paint.

The pigment, or color, was at

long used red and yellow ocher for warpath cosmetics, and the history of this is exciting. True, we don't know much about it, but what the archaeologists have found is curious. Here in Maine our earliest population was what we call the "Paint People." They were some kind of forerunner of the savages found by the first Europeans. They left their kitchen middens along the coast, and must have liked seafood. There must have been a lot of them, too, and for a long time. esoteric symbolism with red ochwhich they brought with great labor from far away to line their graves. We know they did this, if we don't know why, and

because of this use of red ocher they became the "paint" people. smearing the face with color, done by the Indians in our history, is a survival of this older custom? A transfer, somehow, of the paint fetish? Why should we, a more sophisticated people, regard this as odd? What about the notarial seal? Just because, long ago, a seal was an accepted identification, lawyers today go on year after year sticking gummed seals on documents, just as if the seal meant something still. Ponder on that - the fact is that we don't need a seal; the truth is that we keep using

Well, with paint already historical, the pioneers moved in and wanted to protect their new-

All along our coast, easily accessible, was fish oil from the ared that on their buildings A little yellow or red ocher from the old Indian paint mines gave them color. But pogey-oil didn't dry too well - it remained "green" for years.

So with that uncanny inven iveness which often distinguish es the pioneer from the later expaint. They didn't know it was casein, they thought it was skimmed milk from the old red cow. and harden the oil, and this was the whole factual explanation of the red barns of New England, which often were yellow. Ours was yellow, and the paint mine where the ancestors got their ocher is about two miles from here, and may still be seen.

This paint was homemade They drove a wagon to the mine They put their fish oil and milk in a tub, added the clay, and stirred it with a paddle. It didn't have a homogenized smoothness, and they didn't use a nylon brush, but it covered, had color, and penetrated the grain In after years they found coal-oil, and although for a time it had a pungent ordor it dissipated rapidly, and certainly wasn't as pungent as fish oil. It dried better,

point, oil and water won't mix, and you can't stir up pogey-juice and fat-free lactic fluid. Since everybody knows this, there is only one logically positive ans-This stuff remodeling sub ites try to scrape off the wide pine boards in the old farmhouse they are restoring is a mirage, a figment — untrue and impos-sible. The unanswerable fact has stared down truth.

I guess something of this sort thing has interfered with Pat's orbital flight. Pat though he did it, and those of us who watched in a kind of horrified amusement were similarly inclined. But we were mistaken. It could not have happened, so didn't. This will be a most sorry world, Leone, when there are no longer a few assorted impossible things to do before

By John Gould in the Christian Science Monitor.

Weather Is No Respecter Of Trees

strikes the visitor to New Orleans is that it is a city of trees. They are trees to be proud of the live oak and magnolias sheltering the columned mansions of the Garden District, the palms spaced along broad Canal Street and in the patios of the Vieux Carré, the camphor and hackberry lining the centre strip of St. Charles Avenue uptown. "Only an act of God," a resident of the old city once said, "could Do you suppose the habit of make us cut any of them down."

Last January, a record cold spell (low temperature: 12 degrees) laid a killing touch on some 200,000 trees. The sight of their leafless branches this summer was bad enough, but another problem loomed. The brittle trees, toppling when tropical storms roar in, could snap power lines, block streets. Now New Orleans is preparing to fell the thousands of dead trees and lop bare branches off thousands more, hoping to finish before the hurricane season hits. The city of trees had had its act of God.

Minds are like parachutes: they function only when they're

NATURAL TEETER-TOTTER — Visitors to Natural Bridge State Park at Slade, Ky., are awed to silence when they come upon this balancing act of nature. Their concern is groundless, however, for Balanced Rock has held its precarious
