Hay and pasture mixtures . . .

HATCHER CHUT HICKOT PINCH PARTY AND THE HATCH

to meet your specific need!

Now - more than ever - the CO-OP Big Bonus Hay and Pasture Program takes the guesswork out of selecting seedmixtures for higher yields; hence higher farm profits. How? Simply by taking advantage of our new prescription mix seed service. And it's so convenient too . . . right in your own area! Here's how it works: just pay a visit to your CO-OP and discuss your paracular seed requirements with its Soil and Crop Specialist. Based on Department of Agriculture recommendations, high quality name-variety seeds will be accurately blended in our NEW SEED MIXER! These specific mixtures will allow for maximum yields of the hay and

pasture required in YOUR livestock program.

Editorial Comment Time To Critically Analyze

It is disturbing to observe how biased and uninformed has been the debate concerning the mpending legislation to provide animals for research purposes. At the one extreme are emotional pleas of the anti-vivisectionists; at the other extreme, the emotional harangues of those who claim that research animals are required regardless of the cost imposed. It is certainly time that the issue be critically analysed in the light of relevent considerations rather than these essentially

Under the present circumstances animals are collected by private agencies (the Human Societies) and public agencies (the pound). In a number of municipalities – Kingston for example – the Humane Society shelter provides a service to the municipality and is paid for it. The service is in acting as a pound for animals collected on behalf of the municipality. The payment is not a subsidy but merely a payment for services rendered.

Bill 73 which is currently before the Ontario legislature recognizes three agencies — pounds (including both public and private animal shelters), animal dealers, and research institutions. On demand, any dealer can obtain an animal from a pound. The dealer is free to dispose of the animal as he sees ift. Some provision is made for the licensing of dealers by the "Research Animal License Review Board" and some minimal restrictions are placed on dealer qualifications (e.g., "has not been convicted of an offence relating to cruelty., maltreatment or neglect of animals"). A research facility is defined as "premises on which animals are used in research and includes premises used in connection therewith for the collecting, assembling, breeding or maintaining of animals and includes farms on which pregnant mares are kept. for the production of urine." The Government will appoint inspectors for purposes of enforcing the provisions of the Act.

Thus the Bill provides for a costly administrative machinery to enforce the sale of animals from private and public pouns for the purpose of research. The basic principle of government action is that it imposes coercion on minorities in all cases where unanimity cannot be secured. Coercion is to be avoided, not at all costs certainly, but in all cases where the benefit to society cannot be shown to be greater than the cost. The fundamental objection to Bill 73 is that it would force a private organization, i.e., one supported by private funds, into a course of action with which it is fundamentally opposed. In proposing the Bill, the Government has not demonstrated that this coercion is of unquestionable net benfit to society.

It is not a question of the Government providing animals for research; it is a question of the Government outlawing certain activities. It is not a question of the Government working through its own agencies, it is a question of attempted coercion and blatant interference in the rights in individuals. It is a question of whether animals should be turned over to research institutions regardless of the costs of ths action on our society. The cost of this would-be action is to be measured in terms of the loss of freedom to engage in activities which are not anti-social. Those who claim that the only question s one concerned with whether animals benefit man are platantly wrong. In the extreme, who among us would dispute that wood and timber are beneficial to man, and indeed, many even save lives? Or who would question that the product of mining is beneficial? But would we be willing to sacrifice our entire environment for the sake of the timber or minerals, destroying wildlife and natural habitation? Some of us would — undoubtedly. There are those who function solely on short run considerations. The timber and mining interest for example. We have seen denuded countryside from uncontrolled lumbering and strip mining (Pennsylvania and British Columbia, for example). But there are costs to any endeavour and we must be certain that we are willing to pay the cost of an action. The cost of the unnecessary intrusion in the rights of individuals is simply too great in the case of Bill

THE JARVIS RECORD, JARVIS, ONTARIO

Under the proposed Act, no individual would be allowed to form societies to shelter animals to find homes for them, and if this were not possible, to dispose of them in a manner which would cause least suffering, If there are those in our society who believe in this principle, then why should they not have the right to bide by it? If we as a society believe that animals should be provided for research. then let the Bill apply only to public pounds. If both alternatives are available, as ndividuals we could choose which alternative is most desirable without eliminating the other. After all, there are only twenty-eight Humane Society Animal Shelters but there are hundreds of public pounds in the Province. I personally find it incomprehensible that our altruistic reasearchers demand the sacrifice of principles which are basic to a free society in order to meet their "unquestionable need" for research animals.

There have been anumber of erroneous arguments used by proponents of the Bill and these should be exposed. Some on campus have claimed that conditions in Humane Societies are "terrible" and that Humane Societies kill animals by electrouction, which is not the least painful way. On the first point, I would suggest that the Humane Society has very high standards for its shelters. Perhaps the annoymous author(s) of the comment confused these conditions, as have so many readers of the Bill, with the deplorable conditions in many of the public pounds of the Province! Those that claim that the Humane Society is not using the least painful means of death are usually passing a judgement on their own shortcomings in public relations. Surely they would not claim that the Humane Society wants to torture aniamls. As long as that is the case, then the reason why they are not using the least painful means is a lack of knowledge, which can be attributed in no small part to our anonymous scientists, i.e., those belittling the society in this regard.
