The Ontario Federation of Agriculture has a new General Manager and Secretary-Treasurer, Gordon Hill has announced that Mr. Jack Hale will be taking over this new OFA top staff eost immediately.

"We are very fortunate to have a man of his ability and experience working for farmers. The Federation is making some important changes as we move ahead in our new Individual Service Membership program", said Mr. Hill.

"I am joining the Federation of Agriculture in order to serve the farmers of Ontario in building a strong and effective organization, their voice will be clearly heard in the community Mr. Hale explained. and so end up with the same

Mr. Hale was born in Winnipeg, Manitoba in 1920. He has had extensive experience in the purchasing and marketing of livestock, both for industry and the farmer. Most recently, he responsibilities in the now returns to the agricultural field and to the service of farmers.

Mr. Hale serves on The Metropolitan Toronto School Board, representing the Seperate School Ratepayers and is, therefore, very familiar with the present problems of financing education.

"The OFA is right. It is time to take a stand on education taxes. I will be right in there pitching for farmers in this and other areas where they need the help of an effective organization", said Mr.

The campaign to withhold education taxes is going ahead. A meeting with the Ontario government failed to produce any satisfactory proposals by the government to deal with the situation which is hurting farmers across the

"Mr. Stewart, Mr. MacNaughton, Mr. McKeough, and Mr. Davis all agreed that something nothing has been done", said OFA President, Grodon

The results, and lack of action resulting from the meeting, were reported to the monthy members' meeting, and plans to go ahead were explained to the

James Jacklin of members that almost every member of the Bruce County council had signed the Federation petition calling for the cost of education to be taken off property.

There was some discussion of the need to get education tax off all property. Several farmers have been told by assessors that if education taxes are taken off farm land only, it would be quite easy to increase the assessment on the buildings and a plot of land around the buildings,

OFA executive member Bruce Taylor urged farmers to send in petitions and letters to the OFA office at 387 Bloor Street East in government to take immediate action to take education taxes off

tax load as before.

"Owning a farm or a house does not prove that you have the ability to pay taxes. The income and corporation tax measure ability to pay and that's where the money must come from to pay for education. Farmers want to pay their fair share, but fair share depends on the income of the individual", said Mr. Taylor.

Specially Written for The Record Sy Sterling Taylor Canadian Press Staff Writer

For years, Lloyd Percival of Toronto has been claiming that the only thing wrong with athletes in Canada is a lack of physical And for just as many

amateur athletics. Percival, you see, is a physical fitness expert who charges for his tips and special programs at a

years, he has been criticized

for making a business out of

But, more and more during the last few years, the opposition has been fading into the background and amateur athletics in Canada are taking on a professional look.

Practically every athlete at Mexico for the 1968 Olympics had trained under some form of Percival

And a few weeks ago when Canada won the second round of the Davis Cup zone competition for the first time since 1913, a little investigating revealed Percival behind the success.

"Percival had each player programmed differently in an effort to maximize what he could do", said Canada's non-playing captain, Laurie

"The team worked out at the fitness institute for five weeks. Mike Belkin didn't miss a day for the final two

The superior conditioning of Belkin and doubles team-mate John Sharpe was evident in the second-round competition against New

Canada was 1-1 in games after the first day and took a 2-1 lead by downing the New Zealanders in straight

sets of the doubles match. The conditioning showed particularly in the second set of the doubles match. which Canada finally won 11-9 by wearing down the opposition and eventually ahead 10-9.

The following day Belkin won his singles match to give Canada the best-of-five

"Percival designed a special set of exercises", Belkin said, "Sharpe and I both work during the day so he set up some exercises we could do at home without equipment; things like wind

Strong says this is something new for tennis players.

"Some of the countries do circuit training, but I don't know of any that did as thorough a job of physical training and under one of the world's leading experts."

The matter is a bit ironic. Percival has been attempting for years to help Canada's athletes in sports at which this country excels.

"It's a shame that the Russians use my methods to beat Canada in hockey when all I want to do is help my country", Percival has

Now, Percival has helped a tennis team although tennis is by no means one of the great Canadian participant sports.

On The Farm Front

consecutive year, the Ontario Department of Agriculture and Food and the Department of Transport are joining forces to present weather forecasts designed especially to serve the farming population of southwestern Ontario. Presented twice daily at 6:30 and 11:30 a.m., seven days a week, the forecasts are designed to persuade the farmers to use the program as a tool for farm management, says David

Weather Services. The weather forecasts are designed to assist the farmer in the timing of his planting and care of his crops during the growing season. For instance, the forecast on wind velocity will help the farmer make his decision on whether or not to spray field crops.

Pallett of the Ontario Farm

"This year", says Mr. Pallett, "we are better

ur-day forecast."

Tobacco farmers find the service particularly useful as their crops are greatly affected by weather. With the assistance of the weather forecasts they can schedule the planting and care of their crops more

Forecasters also hope to predict the possibility of disease and insect invasions. For instance, the hatching of the red mite is closely tied to temperature and humidity. An accurate prediction of the hatching date will give the farmer a chance to take preventive

The forecasts will continue through the growing season until October to give farmers the advantage of accurate weather predictions during the crucial harvest season.

Civilization

On Station CBLT, Channel 6, there is running a es of shows entitled "Civilization." These are English ductions, the producer and chief spokesman being Sir meth Clark. Someone writing about this series says he considers civilization to have reached its highest it in the 14th century. That century certainly luced many great paintings, statuary and so, but nd these were the dungeons and torture chambers of Middle Ages. No, I would not call that period even

how about our own society in our own day? Are vilized? That depends largely on how you look at it. nstance, to me, the ability to land men on the on and bring them back is not a mark of civilization. as a triumph of scientific effort and mechanical skill, these are not necessary to produce a truly civilized iety. In Fact we might have to abandon a lot of ntific research and development in order to become civilized. Or we may be able to incorporate them a future civilization. But they would be secondary. Recently, in Ontario, there has been published the rt of the Hall Dennis Committee on Education. ong other things this appears to advocate what they "democracy" into the class room from kindergarten Grade 13. That includes letting Public School children oose what they will or will not study. The teacher no ger teaches, she is a "resource person." This raises a ture of class room chaos, while the teacher (resource son) look benignly on. To such people discipline is a word. Such ideas are decidedly not civilized. Any ciety, to be considered civilised must include the idea discipline, without it the society would not only be vilized, it would simply collapse.

Civilization requires that the emphasis be placed on ple rather than on mechanical ability, money ing, political scheming and so on. It requires that the are of all the people, including the "down and s", should be the chief aim of any government. As I discipline must be enforced to prevent some civilized members of our society from running amok, justice should be rendered evenly. All the scientific overies and inventions would be devoted to reasing the well-being and happiness of all the people,

her then being used for purposes of war. Of course, the people should respond, they should willing to serve the State, in civil affairs, in any Pacity if called upon. Thus bankers might serve a term farm labourers, chefs serve in a lumber camp and so To me, the old motto of "All for each and each for pretty well sums it up.

Choosing And Operating Gas-Powered

Lawn Mowers

Mowing the lawn is one of summer's most regular jobs. Anyone needing a new lawn mower should know the advantages and disadvantages of the various types available, says Professor Ross Irwin, School of Agricultural Engineering, University of

The gas-powered rotary

lawn mower of the walk-behind type is jaexpensive, has blades that are easy and cheap to maintain, will do a good job in tall grass and weeds, and can mulch leaves. It is easy to maneuver and can cut close to obstructions. On the other hand, rotary machines don't do a very neat job, will tend to shree the grass rather than clip it if the blades are left unsharpened, and are unsafe on uneven or terraced ground. Operators can save money by sharpening their own blades with a file or grinder, and should take equal amounts off each blade to keep the machine

in balance. The correct handling of these machines will help operators achieve best performance, and help ensure user safety. The machine should enough gas to do the entire lawn, so that there is no need to refuel the machine when it's hot; a four-cycle engine is best for this. Professor Irwin adds that a two-cycle machine needs extra attention because of the need to add oil to the

The front wheels of the mower should be staggered to prevent lawn scalping, and a front corner discharge chute will keep the cut grass away from the operator. Large wheels with bearings make the machine easy to push and turn. Professor Irwin points out that the machine should always be turned in the opposite direction from the one in which the chute points. A range of cutting heights, from one to three inches, should generally be obtainable.

Stones and debris on the lawn should be picked up before cutting begins. Mowing should be done across the slope.

Among the accessories that can be added to a rotary walk-behind mower are grass catchers, automatic speed controllers or governors, and rustproof

States and have the rest of the world starving to

president. Nine months and ten days after Canada entered the Europeon conflict, the Dominion Government announced plans to

defence of Canada, conscripting all able-bodied men up to 45 years of age, except those needed for vital industries placing all the lives and property of the people of Canada at the disposal of the government.

Second Class Mail Registration No. 1124

Oh, for the life of a teacher

Show me a teacher in June, and I'll show you a character with a crumpled shirt, a wrinkled brow, and a desperate look in his eyes.

His spirit it treading the lush green of the golf course. His inward eye is contemplat ing the dark swirl of water der a log in a trout stream. And his winter-fat, pudgy body is there in the classroom which is more like a steam bath. Room temperature, 90 degrees.

Before him loll about 30 students, eyes glazed, minds turned to something important, like a swim, or a joyride, or just lying in the sun.

Chief difference between them is that the kids are arrayed in their coolest, while he, adhering to some ancient and ridiculous tradition, quietly steams in his swaddling of shirt and tie, jacket and trou-

The students are there only because they have to stick around to write last-hope tests, and find out whether they've been promoted or have to write the "finals." The teacher is there only because somebody, in his infinite wisdom, has decreed that school will continue until a certain day in June.

It's not exactly what we in the so-called profession's jargon call "a good learning situa-

Someday, someone with some common sense is going to close the schools on the first day of June, and open them on the first day of August. June is a month for joy in Canada, not imprisonment in a sauna bath. The days are long, the mosquitoes haven't really found the range, and the world is green and glorious.

By August, the sun has lost some of its blast, the days are shorter and that first wild lust for the lushness of summer has abated. School could run from 7 a.m. to 1 p.m., and there'd still be a decent chunk of a summer day to be enjoyed.

It's not only the heat that makes June rough for teachers. It's the last-minute panic.

There are 64 memos from the office, telling you to be in three places and doing three different things, at the same time. Or so it seems.

There are the final exams to set, supervise and mark. There are marks to be mustered that would murder a mathematician, and written down in six different places. There are new books to be ordered, and old books (about 10,000 in my case) to be sorted and counted and stored. And everything is to a deadline that always seems to be yesterday.

Some of the young, new teachers find it a traumatic experience. Something like trying to milk a cow while looking over your shoulder for the dangerous bull known to be in the same field. The oldti mers just get irascible, and ignore the bull.

But who can complain? There is the deep satisfaction of knowing that Joe Dough has passed and somebody else will have to teach him next year. that Naughty Nancy, she of the cocky walk and the talky talk, has her ring, and will be driving nobody crazy next year except the poor simpleton who gave it to her.

There is the sincere satisfaction of knowing that some of your graduating students will probably contribute a lot more to the world than you have, as doctors, nurses, teachers, engi-

There is a special touch of sadness when the kids in the two-year course, who are finished with education, probably forever, inarticulately tell you they have enjoyed their year with ou. Their future is not in pastel shades. They seem so young and vulnerable. You have a great wish that at least they'll find happiness, if not

And finally, there are two glorious months ahead which you don't have to leap to your feet and scuttle somewhere like Pavlov's rats, every time a bell rings. I think I'll stick it for another year.
