In her garden, Mrs. William Clark, Jarvis, displays one of the "Japanese Long" variety of cucumbers of which she has an excellent crop. Mrs. Clark said, "They are really beautiful, they are very tasty and you don't have to peel them either, you just wash them off and slice them with the peel on, the peel is quite tender and actually very nutritious." (Staff Photo)

Plant Sprays Control Pests

Most insects hatch and begin to feed on garden plants in the spring. It is important that these pests be destroyed before irreparable damage is done. A thorough garden cleanup will help to destroy some of the pests but chemical control will be required for others.

There are several chemical sprays or dusts which give good control. Sometimes a combination of different types will be necessary.

Most insects can be killed with either malathion or carbaryl (commonly called Sevin). Malathion is very effective and destroys several types of insects. Sevin is safe and quite useful in the garden but is not very effective in controlling aphids or mites. It is also harmful to the honeybee. Both chemicals are relatively harmless to humans and animals but have a short residual effect and therefore must be applied more than once.

The chemical Cygon is taken into the sap stream of the plant to control insects when they enter.

Derris, also known as rotenone, is one of the best controllers of vegetable insects.

Metaldehyde baits are good if slugs become a problem.

Subterranean insects such as wireworms and cutworms can be controlled by chlordane applied to the soil.

Multipurpose dusts containing both insecticides and fungicides are available. They are most effective in controlling a number of different insects and diseases.

Systemic pesticides are now on the market and have the advantage of long residual control. However, they are very toxic and must be used according to all recommended precautions.

Most garden supply centers have a wide selection of pesticides for home use. But always remember: read the label first and follow the directions carefully.

A Canadian fashion, this canvas midi coat with Borg trim, worn with hand crocheted accessories, is typical of the exciting new fashions being manufactured in Canada with the encouragement of Fashion Canada, a promotional program started just over one year ago by the Federal Department of Industry, Trade and Commerce.

Either Hand Is The Natural Hand

A child is born right-handed or left-handed, and it is well to let nature take its course, says the federal health department publication, "Up The Years From One to Six."

On the basis of a great deal of observation, many experts maintain that if a child is prevented from using his natural hand, he will likely have trouble in learning to talk, write or read.

Many babies don't seem to know which hand they prefer to use. Some children may be over two before it is

clear which hand they prefer to use. It's important not to confuse the baby. Always hand him things from the "centre-front", so he can freely decide which hand to put to work.

It is true, as many parents worry, that there are certain inconveniences for the "southpaw", but these are conditions outside the child to which he can adapt himself without too much trouble. Changing handedness, however, may seriously handicap a youngster from within.

Pavement Lane Markings Changed

TORONTO - Honourable Charles Naughton, Minister of Transportation and Communications, has announced a change in the department's policy regarding pavement lane markings which will go into

effect next year to conform with standards being adopted by most Provinces and States in North America.

On two-lane highways the centre line will be yellow and pavement edge lines will be white.

On multi-lane undivided highways the centre line will be yellow and lane markings and pavement edge lines will be white.

On freeways and other divided highways both lane markings and pavement edge lines will be white.

Basically, yellow lines will separate traffic flows in opposite directions; white lines separate traffic moving in the same direction; solid yellow lines indicate passing is not allowed and solid white lines indicate that lane-changing is not allowed.

On the 13,000-mile King's and Secondary Highway system in the province it will take approximately one year to complete the change-over.

Painting pavement markings on the provincial highway system costs approximately \$1.5-million per year and requires more than 200,000 gallons of paint plus 1,300,000 pounds of minute glass beads to provide reflectorization.

Under the new system of pavement markings no additional costs are anticipated.

The Department of Transportation and Communications Manual of Uniform Traffic Control Devices is now being revised and it is expected that municipalities throughout the province will change their pavement markings to conform to the new standard.

PICKETS SHOW TORONTO (CP) - A minister led a 45 minute demonstration in front of a downtown strip show and movie house, and the manager of the strip show offered to make a donation to persuade him to continue.

"It's good for my business," said Ralph Parles of Le Strip. "When they stop in front of our place they bring the crowds."

Almost 80,000 Students Toured Ontario Place

TORONTO - Coming from every part of Ontario, a recorded 79,784 elementary and secondary school students toured Ontario Place without charge from May 17 to school closing, June 30, it was announced by the Honourable Allan Grossman, Minister of Trade and Development.

Busloads of students and teachers - up to 3,500 students a day - came to Ontario Place and visited the Pavilion, Cinesphere, The Forum, and other

places of interest on 96-acre lakefront site. The students came from 1,000 Ontario schools, from such communities as Iroquois Falls, Sudbury, Spanish, Kitchener, Powassan, North Bay, Windsor, Chatham, Thunder Bay and London.

"I am extremely happy that so many young people were able to come and see Ontario Place," said Mr. Grossman. "By viewing these exhibits and films which tell the story of Ontario's past, present and future, they will have a closer realization of the wonderful heritage of this province."

"We plan to continue these school tours in the fall to give more Ontario students the opportunity to see this provincial exhibition. By October 11, the end of our first operating season, students representing 50 percent of all the schools in the province will have visited Ontario Place."

Rockford

The combined church service and communion will be held at Mount Zion on Sunday, July 25 at 11 o'clock.

Mr. and Mrs. Ralph Golding spent several days last week in the north on Commanda Lake, guests of Mr. and Mrs. Wally Kirkwood.

Mrs. Wilbert Howard spent a few days last week with her cousin Miss Pearl Freeland of Simcoe.

Shirley Hall is attending camp at Crystal Springs this week.

Mr. and Mrs. Bob Sargeant of Hamilton had Sunday supper with Mr. and Mrs. Roy Kenny.

Linda Crawford of Woodstock is spending a week at the home of Mr. and Mrs. Don Chambers as the guest of Patricia. Linda is a rural urban exchange student.

Mr. and Mrs. Keith Priest, Susan and David of Innetrip spent the weekend with Mr. and Mrs. Bud Priest and Doug.

Your eyes-your first line of Self-Defence.

The best protective equipment you can ever own is already yours - one pair of eyes. Just knowing what's going on around you helps you avoid job accidents. So it makes good sense to look after your eyes,

with protective glasses if the job calls for them, and regular check-ups if your eyesight's below par. Take care of your eyes, and they'll see you safely through the working day.

Keeping your eyes open is Self-Defence.
