Farm Machinery Values Continue To Climb

of census-farms from June 1, 1966 to June 1, ators, continued to increase from \$3.6 billion to \$3.9 billion

for Canada as a whole. The machinery investment, at market value, per farm increased from \$8,300 in 1966 to \$10,700 per farm in 1971, a rise of 29 per cent. In 1971, as in 1966,

about 75 per cent of mobiles on the farm. farms had more than practically unchanged o n e automobile per farm and this increased period, although total 85 per cent to 88 per cent automobiles reported declined from 356,000 in 1966 to 324,00 in 1971.

The number of farms per farm reporting. reporting trucks declined from 261,000 in 1966 reported on farms in 1971

compared with 61 per

Among all farms in 1971. there were 31,000, or 8.4 per cent which reported neither atuomobile nor truck located on the farm, but many of these would be farms on which no one was living.

The number of tractors reported on farms in 1971, at 597,000 was from 1966. The percentage of farms with tractors increased from and the average number of tractors increased from 1.6 to 1.9 Grain combines re-

to 370,000. Thus the av- farm changed little on erage number of trucks a national average basis ue of farm machinery and equipment, as rethe period. There were number of farms, the 68 per cent of the farms proportion of farms with reporting trucks in 1971 combines increased from 37 per cent in 1966 to 41 per cent

> Swathers on farms increased from 124,000 in 1966 to 140,000 in 1971 and the number of farms reporting swathers rose from 117,000 to 128,000 over the same period.

Pick-up hay balers also became more common on farms in 1971, with 153,000 reported, compared with 137,000 in 1966. Over the same period, the number of farms reporting balers rose from 135,000 to 151,000.

Despite the continued decline in the number of trucks of census-farms from to 248,000 in 1971 but totalled 163,000 compared with 170,000 in harvesters increased from 345,000 1966. The number per from 24,000 in 1966 to 29,000 in 1971. While this was the least frequent of the farm mac-Census of Agriculture, it showed the greatest percentage increase at 17.4 per cent. The percentage of farms reporting forage harvest-

ers increased from 5.4

per cent in 1966 to 7.3

per cent in 1971.

Marking the general shift from dairy to beef production, farms reporting m i l k i n g machines declined from 103,000 in 1966 to 81,000 in 1971. The proportion of farms with milking machines, which had risen from 22 per cent in 1961 to 24 per cent in 1966, reverted to the former level by 1971.

hurricane - strength storm once a year.
Reeve Frank Peart,
of Oneida Township,
who recently visited New York State to view the damages of Hurricane Agnes saidit was "disastrous."

"Sixteen to 18 inches of rain fell and the damage was unbelieveable. We have to keep this in mind. A storm like this is not impossible in this area."

Reeve John Kincaid, of Hagersville, said that perhaps those along the Grand River could have a notice in their building permits that the area may be susceptible to flooding.

Mr. Coutts said all nunicipalities along the Grand had been sent the information on the floodlines in June 1971 and that the GRCA's planners are working with municipal planners, when requested, on setting up green belt areas along the river.

of their own land, from which the township gladly accepts a full qualify it for specific jobs. Often, the synthetics are better than natural fibres, and cheaper to produce. But to get your money's worth from them in year's taxes, including "For over 50 years; the taxes received from appearance and service, you have to know how to care for cottage owners com-

prised a healthy share of the total budget of the township. Why suddenly have we become second class citizens?" the WTCAA asks. The bylaw in question

is part of an overall bylaw that has been before council for some years now, but has yet to be enacted. The public meeting to

air the proposed changes is a result of a decision handed down recently by the Division Court of Ontario that ruled all property owners in an area affected by a proposed bylaw should have a chance to discuss it prior to it being approved at the council level.

Following Friday's discussion, council may or may not make changes in the proposed a-mendment before sending it off to council's solicitors. Following

move clothes and hang on

As the name suggests, this fibre is a modification of acrylic fibre. Modacrylics are marketed under two major trade names — Verel, which is primarily used for carpets, and Dynel, which is used for a wide range of items from men's socks to synthetic hairpieces.

Dynel fabrics should not be

exposed to temperatures over 170 degrees F. Wash on a normal "warm" cycle, and if iron ing is needed, use only a very

the manufacturer's label, which identifies the type of fabric and usually gives laundering or cleaning instructions. (This labelling will soon be compulsory under the Canadian Standards Association regulations.) Keep the label and mark it so you will know which garment it belongs to.

There are several general which will be covered in this series of articles on their laundering and care.

Acrylic fibres are highly versatile, combining strength and weather-resistance with a soft, silky texture, and natural resili-ence. Acrylic fibre drapes well, washes easily and dries rapidly requiring little or no ironing. It is almost shrinkproof.

The major trade names iden-Orlon, Acrilan, Zefran and

To launder acrylics, first pre-treat heavily soiled areas by dampening and rubbing them with a little Borateem. Leave for a few moments, then hand wash in lukewarm water.
Avoid wringing or twisting the garment.

FOR FRIENDS WE'VE WON, THROUGH

solicitors. Following their appraisal, the bylaw would then be sent to the Ontario Municipal Board, after which residents in the area will be notified.

If there are further objections, then the issue will again be brought before the public.

Following that, a ruling is then made on the legal status of the bylaw.

Avoid wringing or twisting the garment.

If machine-washing, use the "Wash and Wear" cycle, adding half a cup of a laundry additive such as Borateem. It is usually best to drip dry garments of acrylic fibres, so remove them before the final spin-dry cycle and hang on a plastic hanger, straightening seams and cuffs.

If you wish to tumble clothes dry, allow the washing cycle to finish. Set dryer on "permanent press" or low heat. Tumble clothes until they are dry, then allow to tumble for an additional ten minutes without heat (your permanent press setting will do this automatically). Re-

the garment is hung on a hanger while still slightly

For spots and stains, pre-treat with Borateem as you would an acrylic fibre garment. Never use an acetone based cleaner on Dynel, as it will destroy the fabric. Launder as for
