We Need Planning

"How do you keep them in the city when they want to move to the country" questions the Simcoe Reformer in their front page report on the City of Nanticoke council meeting held in Dover

Well some of the answers to that "how" are fairly simple. They just have to be enforced.
Abide by official plans, zoning bylaws and other related rules or regulations.

Don't bend the rules for a friend or neighbour. It could end up hurting him rather than helping

Use common sense and give a little thought

Be firm with those who stretch the truth or lie in order to qualify for a lot.

Port Dover councillor Jack Maythem questioned at the meeting whether Nanticoke is going to have ribbon development along every rural road. He made a good point for that certainly seems to be the direction we are heading in at present.

Many lots are severed off farms for relatives who are supposedly going to help in the operation.... even though they are working fulltime elsewhere, wouldn't hesitate to move with their job or to a better one and the farm is definitely too small to support two families or even require another family's help.

Some lots even end up being sold for extra pocket money.

It's too bad we can't all live in the country whether we're on a farm or not. But it's a case of "you can't have your cake and eat it

We and our councillors may not be around when it happensBut we certainly won't be credited with much foresight when our descendents suffer food shortages, pay exhorbitantly high prices for imported goods or have to expropriate housing areas in order to provide land for food production.

Nor are we going to be credited with much intelligence in the near future if our established farmers have to go to considerable expense and effort in an attempt to cut down natural farm odours because of complaints from neighbors living in ribbons on rural roads. And how will we feel when a farmer starts being harrassed about the noise his grain drying fan makes on a quiet evening.

Ridiculous? You find it hard to believe, but farmers in other parts of Southern Ontario where proper planning was overlooked are suffering these very problems.

Acknowledging that many times urban people moving into the country will create problems for the farmer, Nanticoke councillor Robert Ryerse explained.

"If you're out spreading manure, as an example, and they start complaining they can get you every time if they complain long and hard enough.

Councillor George Dmetriuc feels that to stop ribbon development, it is going to require a very stiff, stringent policy decision set by council. And that's what we're waiting for.

At the regional council meeting in Cayuga last Thursday, the matter of rural severances was again brought to the fore.

The region's planning department questioned the Land Division Committee's decision to approve five severances.... all of which violated zoning bylaws, an official plan or some other rule. Some regional councillors protested against a request for the planning committee to appeal these decisions before the Ontario Municipal Board.

Simcoe's Alfred Judd called for objectivity by councillors in dealing with severances. And Delhi's Fred Peacock agreed councillors should stick to the rules.

We need both objectivity and a "follow the rules" policy at all points on the route severances take from inception to final approval. Indeed it must be difficult to turn down an application made by friend, neighbour or relative since it could cause some hard feelings and for those in an elected position - perhaps lost votes from those who don't respect the job and its accompanying responsibilities.

But we need strong people who can look at each situation with common sense and complete objectivity (regardless of the consequences.) That's what we vote for and that's what we pay for.

And since our councillors have gone to the expense of creating a hefty planning department, why not listen to their reasoning. There is no point in financially supporting planners if they aren't given political support and can not plan effectively.

China is probably the oldest civilized nation

in the world. The first Emperor conquered five

kingdoms and welded them into one nation

together with a system of laws and what appears

to have been a genuine culture.

All this took place around 221 B.C. And he

did much more than that. He abolished

feudalism, re-arranged the five kingdoms into

36 provinces (which still exist), reformed the tax

system and supervised an irrigation system,

parts of which have endured for 2,000 years.

He also gave China its first network of roads
